NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Indian Residential School for the Quarter ended December 31 1946.

Principal Maurice B. Francis

Dated December 31 1946

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the **Sacred Heart Indian Residential** School for the Quarter ended **March 31,** 19**47**.

Principal *Maurice Lefrançois*

Dated **March 31,** 19**47**.

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

FILE

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Ind. Res. School for the Quarter ended September 30 19 47

Dated Oct 4th 19 47

Principal Maurice R. Francis

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Indian Agent

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. *The total number of days in quarter* means every day in the quarter, including Saturdays, Sundays and holidays.
7. *The aggregate number of days pupils in residence during quarter* means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. *The average attendance of pupils during quarter* is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. *The amount per capita grant due for quarter* is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart School for the Quarter ended March 31, 1949.

Principal Maurice Lefrançois

Dated March 31 1948.

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Anthony A. McIlroy
Indian Agent

Dated at

this

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the SACRED HEART School for the Quarter ended June 30, 1949.

Principal M. L. Francis

Dated June 30, 1949

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Anthony M. McIlwain
Indian Agent

Dated at Bruckner

NOTE—Additions to be correctly made and entered at the foot of column.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance

and tuition at the Sacred Heart School for the Quarter

ended December 31, 1943.

Principal Gather & Goretier

Dated Jan 3 1944.

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Anthony M. McIlwain
Indian Agent

Dated at S. Rocket

this 5th January 1944.

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

1945

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart School for the Quarter ended June 30th, 1949.

Principal Luther E. Loveston

Dated July 2nd, 1949

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Anthony J. McMillan
Indian Agent

Dated at JUL 13 1949
this 13th day of July, 1949

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

10031

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart School for the Quarter ended December 31, 1949.

Principal Gather & Louster

Dated Jan 14, 1950

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Anthony McMillan
Indian Agent

Dated at JAN 16 1950

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

2695

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart School for the Quarter ended June 30, 1950.

Principal Gather & Gration

Dated July 3, 1950

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

C. Brown
Indian Agent

Dated at TRIOCKET, ALTA.
this JUL 3 1950, 1950

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Indian School for the Quarter ended Sept. 30 1950.
Principal G. E. Ernest
Dated October 2nd 1950

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Indian Agent

Dated at OCT 9 1950
this 9th day of October 1950

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Ind. Residential School for the Quarter ended December 31st. 1950
Principal G. L. & L. L. L.
Dated January 1951

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Residential School for the Quarter ended March 31st. 19 51

Principal G. A. & S. A. S. S. S.

Dated April 1st. 19 51

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Indian Agent

NOTES ON THE PREPARATION OF THIS RETURN.

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

REPORT of the Brocket Agency School at Brocket on Piegan Reserve for Quarter ended June 19

REGISTER NUMBER	NAMES OF PUPILS	AGE	BOY	GIRL	HAND OR RESERVE	CLASS OR STUDY								STANDING IN CLASS				TRADE OR OTHER INDUSTRY	Number of hours Trade or Quarter	DATE OF ENTRANCE TO SCHOOL	ATTENDANCE		REMARKS AS TO PROGRESS, ETC., REASON FOR ABSENCE DATE OF ABSENCE, WHETHER AUTHORIZED OR NOT
						Grade 1	2	3	4	5	6	7	8	High School	Very Good	Good	Fair				Bad	Total number of days pupil in residence during Quarter	
	Brought forward		27			7	3	3	1	6	5	1	1						2457	1620			
161	John Little Mustache	9	1		A.76	1												Oct.15-50	91	60			
162	L.James Small Legs	9	1		E-100	1												Jan.3-51	91	60			

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Residential School for the Quarter ended September 30th. 19 51

Principal Edith E. Greston

Dated October 1st. 19 51

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart Residential School for the Quarter ended December 31st. 1951

Principal E. J. Austin

Dated January 1st. 1952

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance

and tuition at the Sacred Heart Residential Ind. School for the Quarter

ended March 31st. 1952.

Principal G. L. L. L. L. L.

Dated April 1st. 1952 1952.

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Indian Agent

Dated at.....

this.....19.....

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Providence Mission School for the Quarter ended March 31st 1952.

Principal Sister Elizabeth Kintoff

Dated April 1st 1952.

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

V. L. Burkh
Indian Agent

Dated at Yellowknife, N.W.T.
this April 10 1952.

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart R.C. School for the Quarter

ended June 30th 1952

Principal Geth & Grestie

Dated July 1st 1952

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

C. Brown
Indian Agent

Dated at PRINCE ALBERT, ALTA. JUL 5 1952
this 5 1952

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTE—Additions to be correctly made and entered at the foot of column.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Providence Sancti Spiritus Residential School for the Quarter

ended June 1952

Principal Sister Elizabeth Heitoff

Dated June 28 1952

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

W. F. Kirk
Indian Agent

Dated at Yellowknife, N.W.T.

this First July 1952

NOTE

Principals will please be guided by the instructions printed on the last page.

NOTES ON THE PREPARATION OF THIS RETURN

1. Fill in all the columns of this Return, giving full particulars in the case of each pupil, as called for under the various headings thereof.
2. The columns of the Return should be correctly added and the totals placed at the foot thereof.
3. When, owing to the number of pupils, all the names cannot be included on one sheet of the Return, use another sheet, paging it No. 2, and carry forward all totals, placing them in the proper columns.
4. The Returns must embrace only the quarterly periods ending 31st March, 30th June, 30th September and 31st December, respectively, and should be prepared and forwarded immediately thereafter.
5. No Quarterly Grant will be paid until Returns have been received by the Department.
6. The total number of days in quarter means every day in the quarter, including Saturdays, Sundays and holidays.
7. The aggregate number of days pupils in residence during quarter means the total number of days in residence of all pupils entered on the Return and is ascertained by adding the column under the heading "Total number of days pupils in residence during quarter".
8. The average attendance of pupils during quarter is ascertained by dividing the "Aggregate number of days pupils in residence during quarter" by the "Total number of days in quarter".
9. The amount per capita grant due for quarter is ascertained by multiplying the "Average attendance of pupils during quarter" by the amount of the quarterly per capita grant. In no case, however, will payment be made for any average attendance in excess of the number of pupils for which grant is allowed.

SPECIAL NOTE

A new number must be given to each pupil upon entrance to the school. On this Return the names of the boys and the girls must be arranged consecutively according to numbers.

INDIAN RESIDENTIAL SCHOOL QUARTERLY RETURN

I HEREBY CERTIFY that the within Return is a true and faithful statement of the attendance and tuition at the Sacred Heart School for the Quarter ended Dec 1952
Principal [Signature]
Dated 1952

I have carefully examined the within Return and hereby certify that it is correctly made out in accordance with the instructions of the Department.

Dated at [Signature] Indian Agent
this 19 1952
(Circular stamp: INDIAN AGENT, DEC 24 1952, BRUCEL, ALTA)

NOTE

Principals will please be guided by the instructions printed on the last page.

Ottawa, June 5th, 1930.

Gentlemen:

I have to request that you will please forward chemical refills for the Foamite fire extinguishers at each of the Indian residential schools on the Peigan Reserve as follows:

4 Refills for 2½ Gallon Foamite Extinguishers,
8 " " 1 Quart Size Extinguishers,

addressed to:

Rev. J. L. Levern, O.M.I.,
Principal,
Sacred Heart Indian Res. School,
Brockton, Alta.,

also:

7 Refills for 2½ Gallon Foamite Extinguishers,
5 " " 1 Quart Size Extinguishers,

addressed to:

Vivian S. Lord, Esq.,
Principal,
St. Cyprian Indian Res. School,
Brockton, Alta.

The price charged for supplying the above refills should be F.O.B. Brockton, Alta.

I shall be pleased if you will prepare accounts, in duplicate, covering the cost of the refills for each school separately, and forward same to H. C. Lancaster, Esq., Indian Agent, Brockton, Alta., who is being informed of the order placed with you, and requested, upon receipt of these supplies at each of the above named schools, to certify the accounts and send them to the Department for payment.

Yours very truly,

F. H. Paget

Ottawa, June 5th, 1930.

Sir:

Replying to your letter of the 28th ultimo, I have to say that the Department is today placing an order with the Lafrance Fire Engine & Foamite Limited, Toronto, to ship, addressed to the principals of each of the Sacred Heart and St. Cyprian Indian Residential Schools, the number of refills for the Foamite fire extinguishers as mentioned in your letter. This Company have been requested to forward the number of refills as mentioned by you to each principal.

The above Company have also been requested to prepare separate accounts, in duplicate, covering the cost of the refills for each school F.O.B. Brocket, and to forward same to you. Upon receipt of the refills at each of the schools, you should certify the accounts covering the cost in the usual manner and forward same promptly to the Department for payment.

When the refills are received at each school, you should arrange with the respective principals to see that they are installed in the extinguishers in a satisfactory manner.

Your obedient servant,

A. F. MacKenzie,
Acting Asst. Deputy & Secretary.

Attention: Mr. W. M. Graham.

Dear Sirs:-

In regard to the well at the Roman Catholic School on the Peigan Reserve, we sent men down to pull this pump and lower the cylinder as per your instructions of December 20th, but on lifting the pump we discovered that the information I had got from Mr. Pearson while I was down there in December regarding the depth of the cylinder in the well was incorrect, and we found that the cylinder was 276 ft. down with 12 ft. of pipe below the cylinder, thus bringing the pipe within 8 ft. of the bottom of the well. Therefore, we were unable to do anything that would improve the capacity of the well. As the time the writer was down there last winter, Mr. Pearson, the plumber at Pincher Creek, was quite sure that the cylinder was down only 250 ft. I have, therefore, prepared an alternative scheme for getting a supply of water from the spring to the East of the School, and am enclosing the print of a plan that I have prepared, which would give an adequate supply of water.

You will note that if this work were carried out, it would leave the Reservoir 10 x 30 ft. with 3 ft. of water, which would be approximately 5500 gallons of water. As I examined this spring last winter in December, after the dry season, it was then flowing at a rate which would easily supply 6,000 to 7,000 gallons of water per day; therefore, I have no doubt that plenty of water from this source can be got, and it would also mean that there would be at all times a supply of water for fire protection in the Reservoir at the spring as well as the capacity of the tanks at the School. In the plan you will note that I have figured on an electric-driven pump; this to be placed in a small well-built pump house, on a ledge of rock 3 ft. above the level of the water at the spring; this pump house to be built very warm, so that only a very small amount of heat would be necessary in the coldest weather to keep the pump from freezing; in fact, I believe that by packing this with planer shavings and making two air spaces, it would be unnecessary to have any heat at all. This could be connected with the switch board in such

- a way that -

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

a way that it would be impossible to start the motor on the batteries and only could be used while the plant was running. At it could be controlled from the School, it would be no more trouble to start the pump than at present; in fact, not as much. I would recommend that a Westco Turbine pump be used, direct-connected to a 2 H.P. motor. This pump would work up to 300 ft. head, or about 90 lbs. pressure, if necessary. This is more pressure than is needed in the pressure tanks, but I consider that in case of fire, it would be an advantage to be able to raise the pressure on the line. The Capacity of this pump would be about 15 gallons per minute, or 900 an hour; therefore, running the pump an hour in the morning and evening should give the School an ample supply of water.

I found the supply of water in the old well at the present time just a little less than it was when I made the test last winter. I have prepared an estimate of the cost of installing, and figure that it can be done for Three Thousand, (\$3,000.00), Dollars. This would include excavating, and the building of the concrete reservoir; roofing the same with wooden roof and rubberoid roofing; laying 1½ inch galvanized pipe to the School and connecting to the pressure tank; building a 7 x 7 pump house and making the same as near frost-proof as possible; supplying the necessary pump as stated before, and building the pole-line from the present pole-line to the barn down to the Spring, and making the necessary electrical connections to the engine room.

Trusting that this may be of some use to you, I am,

Yours truly,

Brotherston Electric Co. Ltd.

Sgd. R. A. Brotherston,
Manager.

IN YOUR REPLY REFER TO

No. 406-111 R.C.

ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE

W. REGINA, SASK., 2nd July, 1930.

Sir:-

I beg to bring to your attention the matter of the water supply at the R. C. School on the Peigan Reserve. You will recall that for the last year several reports have been made regarding the shortage of water at this school. Mr. Brotherston, of the Brotherston Electric Company Limited at Calgary, was asked to make a report on this during the winter, which he did, but on account of the severity of the weather he could not accomplish much and I have only just now received a final report from him, a copy of which is attached. You will note from this that he makes a recommendation to build a reservoir at the spring which is situated a short distance from the school, and which he states by actual test would supply from 6,000 to 7,000 gallons of water per day. He has clearly set out what he proposes to do and has forwarded a blue print which I am enclosing. You will note that the cost would be \$3,000.00. I see no other way out of this difficulty than to recommend using the spring water mentioned, as the present well is 300 feet deep, and we might spend possibly \$1,500.00 in drilling another well and then not get water, whereas the supply from the spring should at all times be sufficient to keep this institution well supplied with water.

I would be glad to have your instructions in the matter at your earliest convenience. If the Department desires to go ahead with it, I should be glad if the blue print is returned.

Your obedient servant,

The Secretary
Dept. of Indian Affairs
Ottawa, Ont.

DEPARTMENT OF INDIAN AFFAIRS
CANADA

July 24, 1930.

Memorandum:

DR. SCOTT.

Three weeks ago, Mr. Commissioner Graham reported that he had arranged for the Brotherston Electric Company, of Calgary, to look into the question of the water supply at the Sacred Heart Indian Residential School, on the Peigan Reserve. Earlier, it had been reported that there was a shortage. The recommendation is that a spring, 1000 ft. away, be used. The cost of the reservoir, the water line, the pump house with electric pump and necessary electrical and water connections, would be \$3,000.

Mr. Graham was informed that there were no funds available but that a note would be made for next year's Estimates. He now replies that the matter is serious and he believes that it should receive the earliest consideration of the Department. Of course, there are no funds provided for the purpose. Mr. Orr suggests that the Dominion Water Power Branch be asked to look into the matter when the expenditure can be authorized.

Supt. of Indian Education.

SASK., July 18th, 1930

2 Sir:-

I beg to acknowledge receipt of the Department's letter of the 14th inst (No file No) in connection with the water supply system at the R.C. School on the Peigan Reserve and I note that there are no funds available for this work but that note is being made for next years estimates.

Surely the Department have not given this matter serious attention. If I had any idea that the school could get along with the present supply of water, I certainly would not have recommended that \$3000.00 be spent to bring in an additional supply, but after having the matter thoroughly investigated by a competent firm, the only solution out of the difficulty, was the spring referred to in my letter of the second inst. I might inform you, since reading the above mentioned letter, I have had a letter from Mr. Lancaster, the Agent, reporting the extreme shortage of water and requesting that some action be taken as soon as possible. I have also had a letter from the Principal which reads in part, as follows: "I beg to tell you that our water supply is getting worse all the time and therefore I will respectfully ask you to see that something is done as soon as possible to improve it."

From information I have now, the water supply in the well, is gradually diminishing and

- 2 -

the school can get along at the present time, while the holidays are on, but you will realize that they cannot very well go into the winter without an adequate supply of water.

You have all the information that I have in this connection, I just simply wish to point out that the matter is serious and requires the earliest consideration of the Department,

Your obedient servant

W.M. Graham

Dear Sir;-

I was very sorry to hear the other day that we are condemned to wait till next summer before getting a better supply of water and exposed to be without any water at all, unless a long and heavy rain comes to save us: anyhow, I hope the Department will not leave us without light.

Our storage batteries have lasted already longer than they were supposed, according to what ~~***~~ we were told by the Contractor in 1927; but now, they are really exhausted, and therefore I will be very much obliged if you will kindly ask the Department to renew them immediately.

Yours sincerely,

(Signed) J . L . Levern. O.M.E.

Dear Sir,

Just a few lines to tell you how sorry I was the other day when Mr. Lancaster told me that we are condemned to wait till next summer before anything is done to improve our water supply. I know that you have done all you could to have it done immediately, and I thank you from my heart.

At the same time, I beg to say again that I do not want to assume the responsibility of starting the long winter with such a poor supply of water; it sounds too much like tempting the Providence of God. I hope and pray that nothing serious will happen to stop our work in the school; but I beg to repeat again that I am not without worrying about this sad condition.

Thanking you again, I remain, dear Sir,

Yours sincerely.

Sir:-

I beg to inform you that I made a recent visit to the R. C. School on the Peigan Reserve, and I find that the water supply situation is really serious. I feel that the Department should without delay take this matter into its serious consideration, as, if a fire should occur and the present situation exists, there would be a great danger of losing the plant and perhaps a great loss of life; for, as you know, the school is of frame construction, four stories high, and a fire once started would do a great deal of damage. I have before me your letter of the 2nd of August, No. 116-2-5, and I am making this request in the face of the fact that it is stated that there are no funds available for this purpose.

Your obedient servant,

Rev. Sir:

I am enclosing, for your information, copy of Mr. Commissioner Graham's letter of the 3rd instant, concerning the water supply at the Sacred Heart Indian Residential School. The Department will be glad to have your report in this connection, and a statement concerning the steps you are taking to minimize the danger of loss of life and property by fire. You should indicate the condition of your fire fighting equipment, the suitability of the fire escapes, and state if you believe it necessary to have a night watchman.

REGINA, SASK. October 24th, 1930.

Report of Inspector Christianson on Schools in the
Peigan Agency.

Dear Mr. Graham:-

I have the honour to submit the following
report on the boarding schools in the Peigan Agency,
which were visited during my recent inspection of that
Agency.

SACRED HEART INDIAN RESIDENTIAL SCHOOL (R.C.)

At the present time, there are 50 children
in residence at this school, 30 girls and 20 boys. As
the school has been recently inspected by the Provincial
Department School Inspector, I will not comment on the
work in the classrooms.

While I was at the school the children
were all taken to the Senior Classroom, and a little
concert was put on for my benefit. I was very much
impressed with the appearance of the children. They were
well dressed, clean and tidy, and looked healthy. Their
skin was clear, and there was not a child in the school
who had any signs of sores or skin disease on the
neck or face. What was uppermost in my mind at the
time of my visit was what a great difference, for the
better, there was in the appearance of the children
attending the school today between that of the children
who attended the old school, which was situated across
the river when I first visited the Peigan Agency about
eleven years ago. The fact that they are living under

W.M. Graham, Esq., better conditions in the new school and receiving
Indian Commissioner,
Regina, Sask.

better

- 2 -

SACRED HEART INDIAN RESIDENTIAL SCHOOL (R.C.) CONT'D.

better nourishment, as well as more attention being paid to their education now than there was years ago, is certainly apparent in their appearance.

This school is well managed in every way. The building inside, from top to bottom, is well taken care of - could not be better. The same can be said about the outside.

The farming has been exceptionally good, as you will see by the following. This fall they threshed 4,200 bus. of wheat, 1,300 bus. of oats, and 1,200 bus. of barley, as well as raising 10 tons of potatoes, cabbage, carrots, onions, turnips, and other garden truck - more than they can make use of. A lot of trees and shrubs of all descriptions are being cultivated around the school, and in a few years, in the summer, these grounds will become a real show place. The Brother who is in charge of the outside work is one of the best gardeners that I know of.

They have 55 head of cattle. Out of this there are 18 or 20 cows, and at the time of my visit, they were milking 14 cows. The school sells no milk or cream, and it is all used for the benefit of the children. I was informed that butter was placed on the table every day for the use of the children and staff. The children also get all the milk they can drink. They also had 37 pigs and a lot of chickens. The foregoing is the main reason for the fine appearance of the children. The school is producing a big revenue over and above the grant, which

means

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

SACRED HEART INDIAN RESIDENTIAL SCHOOL (R.C.) CONT'D.

means that they do not have to curtail their expenditures so much.

In my report dated December 6th, 1929, I stated that the cement floor in the boys' playroom was unsatisfactory and that when the boys were playing there, the room became filled with dust from the cement. The Principal and the Sisters again complained of this matter. As the room is small, I am of the opinion that if two coats of cement paint were put on, it would be of great benefit, and although the paint would eventually wear out, it would certainly keep the dust down for a considerable time.

Another matter pointed out in my report at that time was the supplying of screens for the basement windows. When the boys are playing outside around the building, the glass in the windows is continually being broken as the bottom of the sash is just even with the ground. The cost of putting a wire screen on these windows would not amount to very much, and would prevent the continual breaking of glass, which is unavoidable with a number of children playing around the school every day.

On the whole, everything at this institution is very satisfactory.

(M. Christianson)

ED

ALSO TO DATE OF THIS LETTER

COMMISSIONER'S OFFICE,

REGINA, SASK., October 28th, 1930.

Dear Mr. Scott:-

I am enclosing herewith a report on the two residential schools in the Peigan Agency, which were visited by Mr. Christianson early in the month.

The work at the Sacred Heart School seems to be carried on in a satisfactory manner. You will notice that the school threshed 4,200 bus. of wheat, 1,300 bus. of oats, and 1,200 bus. of barley, about one-sixth of the total crop grown by all the Indians on the reserve. You will also notice that they had a good garden, and have a fair amount of cattle - 55 head. It is pleasing to note that they are milking 14 cows. The Inspector does not state whether the girls are milking the cows or not. He should have stated this in his report as this is a most important part of the training of the girls. Nor does he make any comment as to whether the children are baking bread.

The Inspector makes comment about supplying screens for the basement windows. It occurs to me that it should be up to the Principal to buy these screens. This will give you an idea of how much they depend upon the Department to supply every little thing, and it is getting a heavy job looking after all the small details at our residential schools. They even call upon the Department to make minor repairs. To my mind, it is absurd.

Very little is said about the St. Cyprian School. As you will note, the Principal and his wife, who acts as Matron, were away at the time of the Inspector's visit. Special mention is made of the summerfallow at this school, which is well done. I believe Mr. Barlow, the Principal, will make a success of this work.

Duncan C. Scott, Esq.,
Deputy Superintendent General,
Dept. of Indian Affairs,
OTTAWA.

Yours very truly,

Wm. G. Graham,
Indian Commissioner.

116-2-5

Sacred Heart Indian Res. School, Brocket, Alta, OctOber 28, 1930

A.F. McKenzie,
Secretary,
Dept. of Indian Affairs, Ottawa.

Dear Sir,

I beg to acknowledge receipt of your kind letter of the 23d inst., No 116-2-5, ~~dated~~, and to repeat again in reply that the poor condition of our water supply is causing me a great and continual worry.

We have 5 Foamite and 8 Fire Gun Extinguishers and 4 axes, placed in the different stories of the house, and 2 fire escapes: the fire escapes are situated at each end of the building, with doors opening on them in the upper stories. The pupils are given a fire drill at least once a month during the night, and the large pupils are taught to take care of the little ones; when the alarm is rung, each large pupil runs towards the bed of the little one intrusted to his care. Every night, after every body is gone to bed, I go around with my flash light and assure myself that every thing is O.K.

On the other hand, I believe that it would be a good idea indeed to have a night watchman from now on till the spring: we have a man, right here, who would be glad to do this if he is given a decent salary.

By the way, let me respectfully ask the Department this question: Why do you build on the Indian Reserves such narrow and high schools? We are not in the cities, where the lots cost so much; we have as much room as can be desired, and it costs nothing.

Thanking you for your kind letter, I remain, dear Sir,

Your faithful servant,

J. L. Levern, o.m.i.
Principal.

Dear Mr. Graham:

i.e. Ave
I have your 406-11 of the 28th ultimo, enclosing Mr. Inspector Christianson's report on the residential schools in the Peigan Agency. Minor improvements, ~~like~~ screens on the basement windows and cement paint for the boys' playroom floor, should be attended to by the school management.

My attention has also been drawn to your letter of the 30th ultimo, with reference to the water supply at the Sacred Heart School. Your earlier letter in this connection has been received and, of course, engaged the attention of the Department. There has been some correspondence with the Reverend Principal, and, while he is very worried about the inadequate supply, he is taking every precaution against fire. I have authorized him to put on a night watchman until the spring and, next year, I am in hopes that funds will be available to remedy the water supply itself.

Yours very truly,

Duncan C. Scott

Reverend Sir:

I have your letter of the 28th ultimo, with reference to the water supply and the protection from fire at the Sacred Heart Indian Residential School. The Department notes that you are taking extraordinary precautions at this time, and, to assist, I am instructed to authorize the engagement of a night watchman, who should continually patrol the building. A grant of \$40 per month will be allowed to the school for this service. Please make the necessary arrangements without delay. Next year, I am hopeful that funds will be provided for an adequate water supply system.

ALSO TO DATE OF THIS LETTER

Dear Mr. Scott:-

I beg to refer to the second paragraph of your 116-2-5 of the 5th November last, in connection with the shortage of water at the R. C. school at Procket. I am today in receipt of a letter from the Reverend Principal, in which he states that they have just sufficient water for cooking purposes and on some occasions not sufficient. I trust the Estimates will provide an amount for the improvement in this respect, as it is very necessary that an adequate water supply should be provided for this institution. I trust there will be no question but that this urgent need will be met early this year.

Yours very truly,

W. M. Graham,
Indian Commissioner.

DEPARTMENT OF INDIAN AFFAIRS
CANADA

COMMISSIONER'S OFFICE.

W. REGINA, SASK., 7th February, 1931.

Dear Mr. Scott:-

On the 2nd July last I drew the Department's attention to the situation at the R. C. School on the Peigan Reserve in connection with the scarcity of a water supply, and enclosed therewith a report by the Brotherston Electric Company Limited setting out their opinion as to methods which might be adopted to remedy the condition. The final decision of the Department, notwithstanding my urgently advising that action be taken, was that nothing could be done this fiscal year, and in your letter to me No. 116-2-5 of the 5th November last you expressed the hope that funds would be available during 1931.

On the 14th ultimo I drew your attention to the receipt of a letter from the Reverend Principal of the School, pointing out the alarming shrinkage of their water supply. I have just received another letter from him on the same subject, in which he states that his hired man has been hauling water from the spring since Christmas, and that the withdrawal of three barrels of water leaves the spring almost dry and a full day elapses before it fills again. He seems to express doubt as to the efficacy of the proposal of Mr. Brotherston of the Brotherston Electric Company to provide a sufficient supply of water by the adoption of the plan he proposed. It is a matter for an expert to determine how the situation can be met, and it is of sufficient importance to address you on the subject again that you may be aware of the anxiety which is in the mind of the Reverend Principal.

Yours very truly,

Duncan C. Scott, Esq.,
Deputy Superintendent General,
Dept. of Indian Affairs,
Ottawa, Ont.

Ottawa, March 3, 1931.

Rev. Sir:

I have your letter of the 24th ultimo, requesting payment of the salary of the night watchman at the Sacred Heart Indian Residential School for the month of January, last.

In reply I have to say that, when the grant for salary was made, it was intended that you would arrange to pay the watchman each month and forward your account from time to time for reimbursement. Our funds for the balance of the present fiscal year are entirely exhausted, and we will be unable to pay the salary due until after April 1st, when our new appropriation will be available. I shall be pleased if you will arrange to pay Mr. William Houle, the night watchman, the salary due him, and forward, after the end of the current month, through the office of Mr. Agent Lancaster, an account covering the payments made by you up to that time. It is considered that it would be satisfactory if you pay the night watchman and forward your account for reimbursement two or three times each year.

Your obedient servant,

A. F. MacKenzie,
Secretary.

Dear Sir,

With reference to your kind letters of the 5th and the 13th of last november, No. 116-2-5, by which you allowed me to hire a night watchman at our school, at \$40.00 a month, I would like to know how long you intend to pay him: I am wondering if it is only until the spring or until our poor water supply system has been improved. Consequently I will be very much obliged if you will kindly write me a few lines about this matter.

Your faithful servant,

J. F. Levern, omi.
Principal

would it be safe to

Sir,-

The Sacred Heart Indian Residential School on the Peigan Reserve has been having difficulty in the past obtaining a satisfactory supply of water for the school. They are at present using a well. It is reported to the Department that there is a running spring near the school from which sufficient water could be obtained. Will you please instruct your Calgary office to investigate and report on a satisfactory water supply for this building. In making the report I would ask you to please instruct them to keep in mind the fact that funds are very limited this year and it is desired that as economical a system as possible be considered. I would be glad to have this report with an estimate of the cost at your earliest convenience.

Re- Well at R.C. School, Peigan Reserve.

Sir:

When returning from Gleichen to Calgary last Saturday, I travelled with Mr. Fennerty, of the Water & Reclamation Office, Calgary, and he mentioned that he had been sent to the above school to make a report and recommendation for augmenting the insufficient water supply now being obtained from the school well.

Having been present when this well was drilled, and having personally checked the water supply at that time, I may say there was then sufficient water for the needs of the school, - fully 500 gals per hour by actual baling test. I am informed that the flow of water has greatly declined during the past year or two, and that there is now a serious shortage.

I have discussed the situation with Mr. Frederickson, the expert well driller who recently brought in a good well at Blue Quills School here, and he suggests the possibility of the perforations in the bottom length of casing having become partly clogged, thus reducing the water intake. These perforations were made to admit the water from the water-bearing strata at the bottom of the well. As the bottom length or two of casing was reduced to one size smaller, viz 5", the rest being 5 5/8", he thinks it may be possible to bring up this bottom length or two, and should the trouble be from clogged perforations, it could then be remedied, and the full flow of water recovered.

I respectfully submit that before any very heavy expense is incurred with respect to the water supply, it might prove advantageous to send Mr. Frederickson there to investigate the cause of this well falling off in yield, and to see if the original supply cannot be brought back. He has the necessary tackle, which he could ship to Brocket, and go right to work on his arrival. Perhaps the best time would be when the school closes for the holidays, and if Mr. Frederickson is then disengaged, he would undertake this work, charging only his time and expenses. I should be pleased to go with him, and render all the assistance in my power, if so instructed.

I have the honour to be, Sir,

Your obedient servant

E. Gardner Smith

Edmonton, August 13, 1927.

Rev. J.L. Levern,
Sacred Heart Indian School, Brocket.

Dear Sir,-

The following is the result of the bacteriological analysis of the sample of water submitted by you in our container B59, and of the chemical analysis of the sample of water submitted in container #73 for examination.

B 59 Well

Number of organisms per c.c. or each 15 drops	3520
Presence of organisms indicating unfavourable contamination --	Negative.

#72 Spring

Chemical results expressed in parts per million	
Total solids	670
Ignition loss	100
Hardness	Medium
Sulphates	125
Chlorides	2
Alkalinity	440 Carbonate of soda & lime.
Nitrites and nitrates	---
Free ammonia	0.04
Albuminoid Ammonia	0.07

The water represented by the sample submitted in container B 59 does not show any bacteriological evidence of unfavourable contamination, but there is a high bacterial count for such a deep well, which we think indicates the entrance of surface water either down the side of the casing or through a defect in the casing. We think you should investigate for the purpose of excluding any source of contamination.

The water from the spring seems to be too high in soda to make a good boiler water. We think it could be used, but if you wish a complete boiler analysis we would recommend that you write to the Industrial Laboratory, University of Alberta, and we will be glad to send you a container on demand.

Yours truly,

(sd) A.C. Rankin.

prov. Bact. Director.

University of Alberta,

Edmonton, September 22, 1927.

Rev. J.L. Levern
Sacred Heart School
Brockett.

Dear Sir,-

I beg to acknowledge receipt of your letter... I have gone over the analysis of this water as per letter and our files and note that the main constituents are carbonate of soda and lime and sulphate of soda.

In the boilers a certain amount of soft sludge will be precipitated but this could easily be blown off from time to time.

The soda and sulphate of soda are not excessive providing the water does not get too concentrated in the boilers and hence the value of blowing off occasionally.

I do not see that you should have any great trouble with this water and in regard to any chemical which might be added there is no compound which could be economically added to reduce the soda content. A great many boiler compounds rely on making the water alkaline with soda which you already have in the water.

Water such as this may give a little trouble from corrosion of fittings and if too concentrated might foam to some extent, but with careful watching I think you should be able to use this water.

Yours truly,

(sd) J.A. Kelso

Director Industrial Laboratories.

Calgary, Alta., May 26, 1931.

Proposed Water Supply for R.C. Indian Residential School

Brockett, Alta.

Memo. to the Commissioner.

Pursuant to instructions from the Director, dated 8th inst. the writer proceeded to the Peigan Reserve on 18th and investigated the water supply for the R.C. Indian School.

This school was located for many years on the Oldman river north east of Brockett. The soil at this point being gravelly and unsuitable for cultivation, the Indian Department abandoned this site in 1926 and built a new school at a point about 6 miles south of its former location near a spring which at that time was flowing quite freely, possibly 1200 or 1500 gallons or more per day. A well was drilled under the school before construction was begun. This well is located under the pump in the engine room.

The Well

This well is 300 feet deep. On Dec. 14, 1929, Mr. Brotherson, an electrical man from Calgary, pumped water from this well from 7.00 a.m. to 8.30 p.m. He pumped it dry eight times in 13½ hours, obtaining a total of 794 gallons. The average of each pumping (elapsed time) was 1 hr. 45 minutes. The highest amount obtained from one pumping was 225 gallons (first trial), the lowest was 60 gallons (sixth trial). This rate would produce 1400 gallons per day. For some time past, however, the capacity has only been between 500 and 600 gallons. A large portion of the yield apparently depends on the amount of rainfall.

At present the engineer pumps the well dry in one hour. The pump works about three hours per day. Near the end of a "trick" it draws one piston full to two or three strokes.

The pump is a Flint and Walling Kendallville Indiana make, the Agents being Jenkins Bros. of Montreal. It was installed by Scanlan of Medicine Hat.

The tanks

The pressure tanks, located in the engine room, are 10' long by 4' in diameter and stand upright. They would have 70 to 75 lbs. pressure if used to capacity. The school engineer stated and the writer verified the statement by observation, that he could not fill the tank more than one-third full with a consequent pressure of only 20 to 22 lbs. He can occasionally raise it to 30 lbs. but never more, or about two-fifths full.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The well water is good for human beings. A 3/4" pipe leads from the well to the barn at a depth of about 4 1/2 feet and has not frozen as yet although the winter weather has not been very severe since its installation. The writer thinks that 6 feet would be safer.

Engine and dynamo

The Dynamo is a Lister Bruston 110 volts 55 amps 550 r.p.m. and develops 6 KW. The engine is a 12 h.p. gasoline engine.

The well water corrodes the engine cooling tank. A tank was obtained 15 months ago, it is now in the repair shop while the original tank is being used temporarily although it is also badly corroded. The corrosion takes place underneath, the tank being about 7 feet long and 3 feet in diameter, standing on end.

The spring.

The spring (1) is located about 900 feet east of the school and 14.5 feet lower in elevation than the surface of the ground at the school (100-85.5). It is understood that the location of the school was dependent on this spring. It is understood that the spring possessed a much larger flow at that time - 1926, possibly 1200 or 1500 gallons or even more. The dry weather of the last couple of years has apparently lessened the flow as it was measured at about 400 gallons per day on May 19. It has yielded about the same amount all spring and since last summer. The supply apparently depends on the amount of rainfall to some extent. After a rain the 3/4" pipe leading from the spring northward for 100 feet or so runs full. A dam 300 feet north of the spring built of stone 10 feet high impounds the water. It is about 5 or 7 feet deep at the dam. The school engineer is also the farmer, and he hauls water in barrels to the house for washing. He can fill 3 barrels and then has to wait until the small reservoir 20' long 3' wide and 2' deep fills up again. This reservoir was formed by the construction of a small concrete wall across the location of the spring, the natural shale stratum which rises for 10 feet above the spring forming a natural circle behind it. Father Laverne, Principal of the School, cleaned out the spring and built the wall.

The dam which is built of stone and 10 feet high might be raised as high as the spring to impound more water. It would then have a capacity of about 600,000 gallons, but even now there is very little, if any, overflow with its present height. The water is now about one foot below the top of the dam. In 1929 and 1930 it overflowed a little. Very little runoff can be caught. The evaporation would be very high. Every

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

winter the spring and the portion of the small coulee adjacent to it is covered with 8' or 10' of snow which forms a bank northwards from the top of the shale stratum. If a house be built here this would have to be taken into account.

Analysis of the spring water indicates a considerable amount of soda as shown by the attached analysis. It is all right for stock while the well water is good for human consumption.

Requirements of the School

63 human beings at 30 gallons.	1890 gallons.
12 horses at 12 gallons	144 "
75 head of cattle at 12 "	900 "
50 pigs at 2 gallons.	100 "
100 fowls	16 "
Total.	3050 "

The allowance for horses and cattle is considered "fair". Heavily worked horses or milch cows require 20 to 25 gallons.

Amount available (which can be depended upon)

Spring (1)	400 gallons.
Well	550 "
Total.	950 "

The shortage is therefore about 2000 gallons per day.

Present Condition

The question might be asked "If there is a shortage to this extent how is the school carrying on?" The writer asked this question and was told that the children who should be bathed every week cannot have this attention to that extent. They also painfully economize in every way possible. When the water is not available in sufficient quantity they simply do without. The school has been carrying on under difficulties for two or three years.

Proposed Methods of Supplementing Supply.

- (1) The water impounded by the dam at the spring might be pumped to the house. This is doubtful because of the limited supply.
- (2) Obtaining a supply from new springs to the South of the School.

These so-called springs lie to the southwest of the School as shown on the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4.

accompanying map, which also indicates the general layout of the School area. An apparently intermittent spring exists about 1800 feet southwest of the school and 90 feet above its base. The lay brother of the institution who has lived in this area since 1888 led the writer to this point. A narrow coulee exists here, and at its head is boggy ground covered with "niggerheads" or hummocks indicating the recent presence of water. From its mouth (at 169.8 spot shot) a line of fresh vegetation extends northwards showing that water is not far from the surface. The boggy soil lies in a kind of pocket. Another intermittent "spring" lies 400 feet south of this and 50 or 60 feet above it. The lay brother claimed that a stream of water comes from this point after rains, apparently from the plateau to the south.

At the point (4) a well was sunk to a depth of 20 feet by the Indian owner of the house near by. It has filled up to 10 feet but a constant water supply one foot deep lies at the bottom of the well. This well, belonging to an Indian, was not baled for measurement, as it is 500' East of the proposed well and is not itself available. Another well exists less than 1/4 mile west of (2). Father Laverne and the lay brother contend that water can be found at (3) by excavation or drilling. The writer thinks, perhaps wrongly, that it may be found at (2) by excavation. The supply appears to be constant at (4).

If water can be found at (2), (3) or (4) by drilling or excavation or at two or three points and collected, it could be piped under gravity to the School under 90 feet head. The School is about 35 feet high. The necessary pipe trench would be 1800 feet long and six feet deep and two feet wide, or 800 cu.yds. of excavation. Details of pipe, collection of water, etc., would have to be considered later.

(3) Drilling a new well near the School.

This is liable to "rob" the original well, or to partially fail in time of drought, similarly to No. 1 well. It might prove effective however. That is a matter for an expert well-driller to decide.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

5.

(4) Examination of the pump for defects.

Defects may possibly be found but it is not probable.

An experienced driller or "water-man" could be taken to the site for an inspection. After all, an engineer will transport the water to the school, but it first must be found in sufficient quantity. To do this excavation of some kind must be made.

It is suggested that this be authorized in the immediate future as the situation at the school is acute.

This report is accompanied by a topographical map of the school layout, springs, etc.

Two appendices are also attached, consisting of letters to Father Laverne from Provincial analysts. These consist of reports on analyses of water obtained in 1927 from the main spring to the east of the School and from the well. The writer obtained samples from the well, the east spring, and the Indian's well to the south. These have not been analysed as yet.

Four photographs are enclosed.

116-2-5
Sacred Heart Indian Residential School, Brocket, Alta,
July 20th, 1931

The Honourable Duncan C. Scott,
Deputy Supt. General of Indian Affairs,
Ottawa.

Dear Sir,

I beg to submit you these few lines about the poor condition of the water supply at our school. You are not without knowing that this has been causing us serious trouble for the last three years : finally I was told on May 4th, 1931, N6.116-2-5, that the "Department was making arrangements in the immediate future to improve our water supply."

In fact, the Dominion Water Power and Hydrometric Service of Calgary sent here one of their men on the 19th of May, and after having made a thorough investigation, he left on the 21st, saying that he would point out to the Department the necessity of taking an immediate action.... Since that day we have been waiting and have not heard any more about it : we are still waiting, we are still suffering, our water supply has not improved, and in the meantime the sewer pipe system is giving very poor satisfaction on that account.

Therefore I will ask you to be kind enough to give your personal attention to the matter, so that the work may be started as soon as possible.

Thanking you most sincerely for all the past favours, I remain, dear Sir,

Yours respectfully,

J. L. Lavern, O.M.I.

Principal

Sir : I would urge the Department to take immediate action to improve this water system

July 30, 1931.

Sir,-

I beg to refer to your letter of the 22nd of June with reference to the water supply system for the Sacred Heart Indian Residential School on the Peigan Reserve.

It is noted on page 3 of the report submitted that it may be possible to obtain a satisfactory water supply by a gravity system from new springs to the south of the school. It is thought that if a gravity system could be installed at a reasonable cost that the same would best meet the requirements of the Institution. I would, therefore, ask you to kindly instruct the Commissioner of Irrigation at Calgary to take what action he thinks necessary to determine whether it would be possible to obtain a satisfactory water supply as outlined in Paragraph 2 of his proposed method of supplementing the supply.

If a satisfactory water supply can be secured by this system, I would ask that you submit a full detailed estimate of the cost of the installation.

Your obedient servant,

A. F. MacKensie

Ottawa, August 11, 1931.

Gentlemen:

I have to request that you will please forward chemical refills for Foamite fire extinguishers on hand at each of the Indian residential schools on the Peigan Reserve as follows:

4 refills for 2½ gallon Foamite extinguishers,
5 " " 1 quart size extinguishers,

addressed to:

Rev. J. L. Levern, O.M.I.,
Principal,
Sacred Heart Indian Res. School,
Brockton, Alta.,

also:

7 refills for 2½ gallon Foamite extinguishers,
7 " " 1 quart size extinguishers,

addressed to:

Rev. W. Barlow,
Principal,
St. Cyprian Indian Res. School,
Brockton, Alta.

The price charged for supplying the above refills should be F.O.B. Brockton, Alta.

J.P.
I shall be pleased if you will prepare accounts, in duplicate, covering the cost of the refills for each school separately, and forward same to H. C. Lancaster, Esq., Indian Agent, Brockton, Alta., who is being informed of the order placed with you, and requested, upon receipt of these refills at each of the above named schools, to certify the accounts and send them to the Department for payment.

Yours truly,

F. H. Paget,
Accountant & Purchasing Agent.

Ottawa, August 11, 1931.

Sir:

Replying to your letter of the 1st instant, I have to say that the Department is today placing an order with Lafrance Fire Engine & Foamite Ltd., Toronto, to ship, addressed to the Principals of the Sacred Heart and St. Cyriac Indian Residential Schools, the number of refills for the Foamite extinguishers as mentioned in your letter. *See 116-1-5*

The above firm have also been requested to prepare separate accounts, in duplicate, covering the cost of the refills for each school F.O.B. Bocket, and to forward same to you. Upon receipt of the refills at each school, you should certify the accounts covering the cost in the usual manner and forward same promptly to the Department for payment.

When these refills are received at each school, you should arrange with the respective Principals to see that they are installed in the extinguishers in a satisfactory manner.

Your obedient servant,

A. F. MacKenzie

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

INTRODUCTORY.

The Sacred Heart School is located in the Peigan Indian Reserve, about six miles south-east of Brockett, Alberta. The school was built in 1926, and contains 63 inmates. There are also 12 horses, 75 head of cattle, 50 pigs and 100 fowl.

The original water supply, consisting of a 300 foot well under the engine room producing when drilled 1200 to 1400 gallons per day, and a spring 1000 feet east of the school producing, in the opinion of the Principal, 1200 to 1500 gallons per day, was considered sufficient to meet the school requirements. Both of these sources, however, lessened in yield during the dry weather of the last few years. The well at the present time produces only 550 gallons per day while the spring, until lately, produced only 400 gallons through a surface pipe.

Faint indications of water were found lately on the side of the hill to the south of the school, 1700 feet away and 90 feet above. This was favoured for development by the Principal and his assistants. Plans were tentatively made to excavate or drill for water at this point. An exhaustive study, however, indicated that drilling, pumping and excavation would be prohibitive as to cost, particularly in view of the fact that a drill, possibly through rock, might not find water. A visible supply is always better than a speculative supply. Consequently this site was abandoned as a source.

Attention was then turned to the original spring.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

This spring is located at the head of a small coulee 100 feet wide on top and 12 feet deep, beginning abruptly at the face of a partially laminated sandstone ledge, 10 feet thick, of which 7 feet is above the surface of the ground. A small concrete wall had been constructed by the Principal across the face of the coulee and three or four feet away from the ledge, which faces the north. This wall is 3 feet high, the top almost coinciding with the bottom of the coulee. It was decided to excavate between this wall and the ledge to a sufficient depth to ascertain the full capacity of the spring, which was at the time producing 400 gallons per day. The material, consisting of laminated sandstone about 3 feet thick overlying soft laminated clay shale, was excavated for the full width of 30 feet to a depth, in the centre, of 5.5 feet. Two distinct streams of water were uncovered, a large one on the west side and a smaller stream on the east side. These were carefully measured several times.

The west spring produced 830 gallons per day while the east spring produced 360 gallons. Water was also allowed to collect in a deep sump. The water collecting in this sump was measured for a period of 3 hours, and was found to produce 216 gallons or at the rate of 1728 gallons per day. The sides of the pit were seen to exude small streams, evidently not seepage water; this accounts for the difference between the yield of the two small springs and the total yield.

It is also apparent that 1300 gallons which had

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

been flowing through the laminated material was now intercepted by the excavation. These measurements were made after a long period of dry weather and therefore evidently represent the minimum capacity. The above data could only be obtained after actual development of the spring. Development of the spring would insure a reliable water supply for the school since the total discharge of the existing well under the boiler room plus that to be anticipated from the spring when fully developed should equal 2200 gallons per day. This quantity should be ample for all moderate requirements. It was therefore considered feasible to develop the spring and to design a pumping system to carry water to the school.

Plans and profiles of the proposed works, together with estimates of the cost, accompany this report. The elevations given on the plans and profiles are an assumed datum. The top of the east manhole cover of the coal bin at the school is taken as 100.00.

GENERAL DESCRIPTION.

The necessary construction consists of improvement works at the spring, a pipe line about 6 to 7 feet deep from the spring to the school, and installation of a pump.

IMPROVEMENT WORKS AT THE SPRING

The accompanying plan shows the extent of these works. Excavation is necessary in order to form a foundation

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4

for a tank and to intercept the spring water, which is evidently flowing through the subsoil at present. A tank, 7'4" x 7'4" x 9'.0" high, outside dimensions is to be constructed in the centre of the spring area. A manhole 4'4" x 4'4" x 5'0" high is to be constructed above the tank for inspection purposes. These concrete structures should be reinforced.

Two impervious plank wing walls will extend from the north, or outside, face of the tank to the sides of the coulee. These wing walls will be carried to the same height as the tank. Two short plank walls will be constructed against the face of the natural ledge to a height of 4 feet from the bottom of the excavation. The space on each side of the tank and between these plank walls and the face of the ledge will be filled with stones, gravel and sand, as indicated on the plans. The excavated space on the outside of the wing walls will be filled with impervious clay adjacent to the planks and earth over all.

The tank will really act as a sump, holes being left in the sides to allow free ingress of water.

An overflow pipe, placed at about the original elevation of the water, and leading to the outside of the main fill, and covered with stones and manure will provide for surplus water, which can be used for stock-watering purposes. Two pipes should lead the water from the two main springs to the central tank.

The original surface of the water was, and is, at an elevation of 86.0. The bottom of the tank will be constructed at an elevation of 79.0. The foot valve of

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

the supply pipe will be located 6" above the inside bottom of the tank. The tank will be reinforced to withstand the pressure of the soil and stones surrounding it on all sides. The reinforcing rods should be bent at appropriate points to withstand shear.

The 2" supply pipe will lead from this tank to the trench.

Trench and Supply Pipe.

The trench will be excavated to an average depth of about 6'6" and 1000 feet long. This trench cannot be built directly from the pumphouse to the spring owing to the contour of the surface. The galvanized pipe used should be 2" inside diameter, and should be painted with a waterproofing paint. It is noted that certain cities are discarding iron pipe and are using lead and copper.

It may be necessary to locate a stand pipe near the hog corral.

The Pump.

The logical location for the pump is at the school where it can be conveniently operated. The only available space is to be found under the steps of the boiler room as the engine room is fully occupied by other machinery. The only possible space in the engine room existed at the point 'x' on the plan but this would cause an overloading of the main drive shaft. The elevation of the engine room floor is 95.6.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The elevation of the boiler room floor is 91.7, being 9.2 feet below the surface of the ground at that point. The difference in elevation between the bottom of the foot valve in the tank at the spring and the pump is 12'.4, i.e. 92.4 less 80.0. The probable minimum is 6'.4, i.e. 92.4 less 86.0.

Under these conditions a shallow well pump is quite sufficient to pump the water, as the maximum lift will be 12'.4 plus the loss in friction in 1000 feet of pipe and friction in five elbows, a total of slightly less than 16.0 feet. The pump will then be connected with the present pressure system by means of a 1½" pipe.

The necessary water supply should be pumped in 3 or 4 hours. The spring has an apparent capacity of about 1700 gallons per day. This work can be done with a Fairbanks-Morse Typhoon pump, Outfit No.6001-M, with a 1 h.p. motor. This pump will deliver 600 U.S. gallons per hour at a maximum pressure of 100 lbs. The School D.C. Dynamo generates 12 h.p., consequently sufficient power is available. The motor should be so arranged that starting can be done by hand while stopping will be done automatically.

Storage Capacity of Tank and Rock Fill.

The total capacity of the space at the spring occupied by the tank and rock fill between the plank walls and the face of the ledge is nearly 4000 gallons, allowing 40% for voids. This represents more than two days' flow from the spring.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

ESTIMATES.

The following gives the estimated cost of labour and materials necessary for the construction of the system. The prices are based on summer conditions and it is therefore imperative that the work should be finished before freeze-up to take advantage of summer prices. All prices are F.O.B. Brockett, Alta.

ANALYSIS OF WATER.

A sample of water from the spring was preserved, and analysed by the Calgary City Chemist. The result of analysis is given in Appendix 1. This water has four times the salinity of Calgary city water but only 75% of its hardness as most of the salinity is due to the presence of $\text{Na}_2 \text{CO}_3$. It is therefore suitable for all purposes.

PHOTOGRAPHS.

Photographs are attached to the original report.

Edmonton, August 13, 1927.

Rev. J.L. Levern,
Sacred Heart Indian School, Brocket.

Dear Sir,-

The following is the result of the bacteriological analysis of the sample of water submitted by you in our container B59, and of the chemical analysis of the sample of water submitted in container #73 for examination.

B 59 Well

Number of organisms per c.c. or each 15 drops	3520
Presence of organisms indicating unfavourable contamination --	Negative.

#72 Spring

Chemical results expressed in parts per million	
Total solids	670
Ignition loss	100
Hardness	Medium
Sulphates	125
Chlorides	2
Alkalinity	440 Carbonate of soda & lime.
Nitrites and nitrates	---
Free ammonia	0.04
Albuminoid Ammonia	0.07

The water represented by the sample submitted in container B 59 does not show any bacteriological evidence of unfavourable contamination, but there is a high bacterial count for such a deep well, which we think indicates the entrance of surface water either down the side of the casing or through a defect in the casing. We think you should investigate for the purpose of excluding any source of contamination.

The water from the spring seems to be too high in soda to make a good boiler water. We think it could be used, but if you wish a complete boiler analysis we would recommend that you write to the Industrial Laboratory, University of Alberta, and we will be glad to send you a container on demand.

Yours truly,

(sd) A.C. Rankin.

University of Alberta,

Edmonton, September 22, 1927.

Rev. J.L.Levern
Sacred Heart School
Brockett.

Dear Sir,-

I beg to acknowledge receipt of your letter... I have gone over the analysis of this water as per letter and our files and note that the main constituents are carbonate of soda and lime and sulphate of soda.

In the boilers a certain amount of soft sludge will be precipitated but this could easily be blown off from time to time.

The soda and sulphate of soda are not excessive providing the water does not get too concentrated in the boilers and hence the value of blowing off occasionally.

I do not see that you should have any great trouble with this water and in regard to any chemical which might be added there is no compound which could be economically added to reduce the soda content. A great many boiler compounds rely on making the water alkaline with soda which you already have in the water.

Water such as this may give a little trouble from corrosion of fittings and if too concentrated might foam to some extent, but with careful watching I think you should be able to use this water.

Yours truly,

(sd) J.A.Kelso

Calgary, Alta., May 26, 1931.

Proposed Water Supply for R.C. Indian Residential School

Brockett, Alta.

Memo. to the Commissioner.

Pursuant to instructions from the Director, dated 8th inst. the writer proceeded to the Peigan Reserve on 18th and investigated the water supply for the R.C. Indian School.

This school was located for many years on the Oldman river north east of Brockett. The soil at this point being gravelly and unsuitable for cultivation, the Indian Department abandoned this site in 1926 and built a new school at a point about 6 miles south of its former location near a spring which at that time was flowing quite freely, possibly 1200 or 1500 gallons or more per day. A well was drilled under the school before construction was begun. This well is located under the pump in the engine room.

The Well

This well is 300 feet deep. On Dec. 14, 1929, Mr. Brotherson, an electrical man from Calgary, pumped water from this well from 7.00 a.m. to 8.30 p.m. He pumped it dry eight times in 13½ hours, obtaining a total of 794 gallons. The average of each pumping (elapsed time) was 1 hr. 45 minutes. The highest amount obtained from one pumping was 225 gallons (first trial), the lowest was 60 gallons (sixth trial). This rate would produce 1400 gallons per day. For some time past, however, the capacity has only been between 500 and 600 gallons. A large portion of the yield apparently depends on the amount of rainfall.

At present the engineer pumps the well dry in one hour. The pump works about three hours per day. Near the end of a "trick" it draws one piston full to two or three strokes.

The pump is a Flint and Walling Kendallville Indiana make, the Agents being Jenkins Bros. of Montreal. It was installed by Scanlan of Medicine Hat.

The tanks

The pressure tanks, located in the engine room, are 10' long by 4' in diameter and stand upright. They would have 70 to 75 lbs. pressure if used to capacity. The school engineer stated and the writer verified the statement by observation, that he could not fill the tank more than one-third full with a consequent pressure of only 20 to 22 lbs. He can occasionally raise it to 30 lbs. but never more, or about two-fifths full.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

The well water is good for human beings. A 3/4" pipe leads from the well to the barn at a depth of about 4 1/2 feet and has not frozen as yet although the winter weather has not been very severe since its installation. The writer thinks that 6 feet would be safer.

Engine and dynamo

The Dynamo is a Lister Bruston 110 volts 55 amps 550 r.p.m. and develops 6 KW. The engine is a 12 h.p. gasoline engine.

The well water corrodes the engine cooling tank. A tank was obtained 15 months ago, it is now in the repair shop while the original tank is being used temporarily although it is also badly corroded. The corrosion takes place underneath, the tank being about 7 feet long and 3 feet in diameter, standing on end.

The spring.

The spring (1) is located about 900 feet east of the school and 14.5 feet lower in elevation than the surface of the ground at the school (100-85.5). It is understood that the location of the school was dependent on this spring. It is understood that the spring possessed a much larger flow at that time - 1926, possibly 1200 or 1500 gallons or even more. The dry weather of the last couple of years has apparently lessened the flow as it was measured at about 400 gallons per day on May 19. It has yielded about the same amount all spring and since last summer. The supply apparently depends on the amount of rainfall to some extent. After a rain the 3/4" pipe leading from the spring northward for 100 feet or so runs full. A dam 300 feet north of the spring built of stone 10 feet high impounds the water. It is about 5 or 7 feet deep at the dam. The school engineer is also the farmer, and he hauls water in barrels to the house for washing. He can fill 3 barrels and then has to wait until the small reservoir 20' long 3' wide and 2' deep fills up again. This reservoir was formed by the construction of a small concrete wall across the location of the spring, the natural shale stratum which rises for 10 feet above the spring forming a natural circle behind it. Father Laverne, Principal of the School, cleaned out the spring and built the wall.

The dam which is built of stone and 10 feet high might be raised as high as the spring to impound more water. It would then have a capacity of about 600,000 gallons, but even now there is very little, if any, overflow with its present height. The water is now about one foot below the top of the dam. In 1929 and 1930 it overflowed a little. Very little runoff can be caught. The evaporation would be very high. Every

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

winter the spring and the portion of the small coulee adjacent to it is covered with 8' or 10' of snow which forms a bank northwards from the top of the shale stratum. If a house be built here this would have to be taken into account.

Analysis of the spring water indicates a considerable amount of soda as shown by the attached analysis. It is all right for stock while the well water is good for human consumption.

Requirements of the School

63 human beings at 30 gallons.	1890 gallons.
12 horses at 12 gallons	144 "
75 head of cattle at 12 "	900 "
50 pigs at 2 gallons.	100 "
100 fowls	16 "
Total.	3050 "

The allowance for horses and cattle is considered "fair". Heavily worked horses or milch cows require 20 to 25 gallons.

Amount available (which can be depended upon)

Spring (1)	400 gallons.
Well	550 "
Total.	950 "

The shortage is therefore about 2000 gallons per day.

Present Condition

The question might be asked "If there is a shortage to this extent how is the school carrying on?" The writer asked this question and was told that the children who should be bathed every week cannot have this attention to that extent. They also painfully economize in every way possible. When the water is not available in sufficient quantity they simply do without. The school has been carrying on under difficulties for two or three years.

Proposed Methods of Supplementing Supply.

- (1) The water impounded by the dam at the spring might be pumped to the house. This is doubtful because of the limited supply.
- (2) Obtaining a supply from new springs to the South of the School.

These so-called springs lie to the southwest of the School as shown on the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4.

accompanying map, which also indicates the general layout of the School area. An apparently intermittent spring exists about 1800 feet southwest of the school and 90 feet above its base. The lay brother of the institution who has lived in this area since 1888 led the writer to this point. A narrow coulee exists here, and at its head is boggy ground covered with "niggerheads" or hummocks indicating the recent presence of water. From its mouth (at 169.8 spot shot) a line of fresh vegetation extends northwards showing that water is not far from the surface. The boggy soil lies in a kind of pocket. Another intermittent "spring" lies 400 feet south of this and 50 or 60 feet above it. The lay brother claimed that a stream of water comes from this point after rains, apparently from the plateau to the south.

At the point (4) a well was sunk to a depth of 20 feet by the Indian owner of the house near by. It has filled up to 10 feet but a constant water supply one foot deep lies at the bottom of the well. This well, belonging to an Indian, was not baled for measurement, as it is 500' East of the proposed well and is not itself available. Another well exists less than 1/4 mile west of (2). Father Laverne and the lay brother contend that water can be found at (3) by excavation or drilling. The writer thinks, perhaps wrongly, that it may be found at (2) by excavation. The supply appears to be constant at (4).

If water can be found at (2), (3) or (4) by drilling or excavation or at two or three points and collected, it could be piped under gravity to the School under 90 feet head. The School is about 35 feet high. The necessary pipe trench would be 1800 feet long and six feet deep and two feet wide, or 800 cu.yds. of excavation. Details of pipe, collection of water, etc., would have to be considered later.

(3) Drilling a new well near the School.

This is liable to "rob" the original well, or to partially fail in time of drought, similarly to No. 1 well. It might prove effective however. That is a matter for an expert well-driller to decide.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

5.

(4) Examination of the pump for defects.

Defects may possibly be found but it is not probable.

An experienced driller or "water-man" could be taken to the site for an inspection. After all, an engineer will transport the water to the school, but it first must be found in sufficient quantity. To do this excavation of some kind must be made.

It is suggested that this be authorized in the immediate future as the situation at the school is acute.

This report is accompanied by a topographical map of the school layout, springs, etc.

Two appendices are also attached, consisting of letters to Father Laverne from Provincial analysts. These consist of reports on analyses of water obtained in 1927 from the main spring to the east of the School and from the well. The writer obtained samples from the well, the east spring, and the Indian's well to the south. These have not been analysed as yet.

Four photographs are enclosed.

Your file 116-2-5

Sir:

In further reference to your letter of
May 6th regarding the Sacred Heart Indian residential
school on the Peigan Reserve at Brockett, I enclose
herewith a report, dated May 26th, received from the
Commissioner of Irrigation, which deals with this question.

The report recommends that an expert
driller should be taken to the site for an inspection
so as to decide what is the most promising locality to
excavate for an additional water supply.

Your obedient servant,

J. T. Johnston,
Director.

116-2-5
Sacred Heart Indian Residential School, Brocket, Alta,
July 20th, 1931

The Honourable Duncan C. Scott,
Deputy Supt. General of Indian Affairs,
Ottawa.

Dear Sir,

I beg to submit you these few lines about the poor condition of the water supply at our school. You are not without knowing that this has been causing us serious trouble for the last three years: finally I was told on May 4th, 1931, N6.116-2-5, that the Department was making arrangements in the immediate future to improve our water supply.

In fact, the Dominion Water Power and Hydrometric Service of Calgary sent here one of their men on the 19th of May, and after having made a thorough investigation, he left on the 21st, saying that he would point out to the Department the necessity of taking an immediate action.... Since that day we have been waiting and have not heard any more about it: we are still waiting, we are still suffering, our water supply has not improved, and in the meantime the sewer pipe system is giving very poor satisfaction on that account.

Therefore I will ask you to be kind enough to give your personal attention to the matter, so that the work may be started as soon as possible.

Thanking you most sincerely for all the past favours, I remain, dear Sir,

Yours respectfully,

J. L. Lavern, O.M.I.

Principal

Sir: I would urge the Department to take immediate action to improve this water system

July 30, 1931.

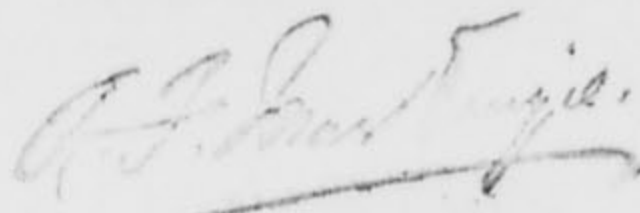

Sir,-

I beg to refer to your letter of the 22nd of June with reference to the water supply system for the Sacred Heart Indian Residential School on the Peigan Reserve.

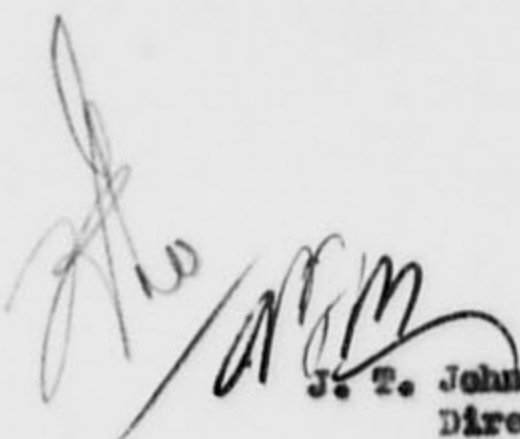

It is noted on page 3 of the report submitted that it may be possible to obtain a satisfactory water supply by a gravity system from new springs to the south of the school. It is thought that if a gravity system could be installed at a reasonable cost that the same would best meet the requirements of the Institution. I would, therefore, ask you to kindly instruct the Commissioner of Irrigation at Calgary to take what action he thinks necessary to determine whether it would be possible to obtain a satisfactory water supply as outlined in Paragraph 2 of his proposed method of supplementing the supply.

If a satisfactory water supply can be secured by this system, I would ask that you submit a full detailed estimate of the cost of the installation.

Your obedient servant,

A. F. MacKensie.
SECRETARY.

Sir:

I have received your letter of July 30th
with reference to proposed water supply system for the
Sacred Heart Indian Residential School on the Peigan
Reserve.

A copy of this letter has been sent to the
Commissioner of Irrigation and he has been asked to prepare
a report covering the possibility of a gravity supply
from new springs to the south of the school.

Your obedient servant,

J. T. Johnston,
Director.

(Original on #..116-2-5;
116-1-5.)

Ottawa, August 11, 1931.

Gentlemen:

I have to request that you will please forward chemical refills for Foamite fire extinguishers on hand at each of the Indian residential schools on the Peigan Reserve as follows:

4 refills for 2½ gallon Foamite extinguishers,
8 " " 1 quart size extinguishers,

addressed to:

Rev. J. L. Levern, O.M.I.,
Principal,
Sacred Heart Indian Res. School,
Brockton, Alta.,

also:

7 refills for 2½ gallon Foamite extinguishers,
7 " " 1 quart size extinguishers,

addressed to:

Rev. W. Barlow,
Principal,
St. Cyprian Indian Res. School,
Brockton, Alta.

The price charged for supplying the above refills should be F.O.B. Brockton, Alta.

J.P.
I shall be pleased if you will prepare accounts, in duplicate, covering the cost of the refills for each school separately, and forward same to H. C. Lancaster, Esq., Indian Agent, Brockton, Alta., who is being informed of the order placed with you, and requested, upon receipt of these refills at each of the above named schools, to certify the accounts and send them to the Department for payment.

Yours truly,

F. H. Paget
F. H. Paget,

Accountant & Purchasing Agent.

A. F. MacKenzie
Ottawa, August 11, 1931.

Sir:

Replying to your letter of the 1st instant, I have to say that the Department is today placing an order with Lafrance Fire Engine & Foamite Ltd., Toronto, to ship, addressed to the Principals of the Sacred Heart and St. Cyprian Indian Residential Schools, the number of refills for the Foamite extinguishers as mentioned in your letter. *See 116-1-5*

The above firm have also been requested to prepare separate accounts, in duplicate, covering the cost of the refills for each school F.O.B. Brocket, and to forward same to you. Upon receipt of the refills at each school, you should certify the accounts covering the cost in the usual manner and forward same promptly to the Department for payment.

When these refills are received at each school, you should arrange with the respective Principals to see that they are installed in the extinguishers in a satisfactory manner.

Your obedient servant,

A. F. MacKenzie
A. F. MacKenzie,
Secretary.

R

Sir:

With reference to your letter of July 30th last requesting a report on the possibilities of improving the water supply system for the Sacred Heart Indian Residential School on the Peigan Indian reserve, I enclose herewith a report received from the Commissioner of Irrigation dealing with this subject.

Your letter of July 30th had reference to the possibility of obtaining the water supply by a gravity system from new springs to the south of the school. The report herewith states that on further examination it was found that the cost of drilling and excavating to prove up the springs for the gravity supply was prohibitive, and it is now recommended that the original spring now in use should be improved as further tests there have found that the supply has been enlarged so as to be sufficient for the requirements of the school. A supply of over 2,000 gallons per day is expected to be obtained from the spring as further developed, but as this is at a lower elevation than the school, pumping is required although the head to be overcome is only about 16 feet. The estimated cost of providing this additional supply is \$2,040.

It should be noted that these estimates are based on summer prices, consequently in order to complete the system within the estimates, and also because the school is in great need of the water supply, the Commissioner recommends that the Department of Indian Affairs authorize this construction as soon as possible.

Your obedient servant,

J. T. Johnston,
Director.

Memorandum:

Dr. Scott.

For some time past the water supply system for the Sacred Heart Indian Residential School on the Peigan Reserve has not been adequate for this Institution. The Dominion Water Power Branch, through their Calgary office, were asked to investigate and submit a report and recommendation. This has been received, and in order to make the supply adequate it will be necessary to improve the original spring now in use. If this is done a sufficient supply of water will be available. Additional pumping equipment and pipe line will be required. They estimate the cost of the work at \$2,040.00. \$3,000.00 is provided in this year's estimates for this work. Will you please advise me if the Water Power Branch can be authorized to proceed with this improvement, which appears to be necessary.

OFFICE OF
INDIAN AGENT

OCT 13 1931
RECORDED

Sir:

In reference the water shortage at the R.C. School on this reserve I beg to draw the Departments attention to the necessity for immediate action in obtaining a further supply of water. Yesterday being wash day they had not enough water from the well to make tea for lunch and were hauling the washing water in barrels from a muddy spring.

Winter is coming on and an adequate supply of water is required for the heating system, bathrooms, toilets, light plant etc. and if something is not done soon a lot of suffering will be entailed and possible damage to boilers and plant.

I have the honour to be,

Sir,

Your obedient servant,

H.C. Lancaster

Re- Water Supply at Peigan R.C. School, Brocket.

Sir:

This letter is unofficial, and may or may not contain any information on the above subject not already known to the Department. I have not been asked to make a report, so am merely passing on a few impressions for whatever they may be worth.

Having supervised the drilling of the well at this school, when ample water was obtained, I am naturally concerned over the falling off in the water supply during the past year or two, and have been giving a good deal of thought to the problem of procuring sufficient water again for the needs of the institution and for the live stock.

After conferring with Mr. Fetterly and Mr. French, engineers connected with the Water Branch Office, Calgary, and being shown their drawings and recommendations following their recent visit to the school in question, I decided with their concurrence to go to Brocket and make a further study of the situation on the spot. On the 7th instant, accompanied by the Indian Agent, Mr. Lancaster, I arrived at the school. The Rev. Principal, Father Lavergne, and his school engineer, were present and gave me all the information within their knowledge regarding the matter under discussion. Previous to my arrival at the school I had called on Mr. Stanley Pearson of Pincher Creek, the local plumber, who had done some work in the well since it was drilled. Mr. Pearson stated he had lowered the cylinder and intake pipe to within 10 or 15 feet of the bottom of the well.

The reports which I had heard of a serious water shortage at this school had not been exaggerated. The well now yields only about 600 gals. a day, which, of course, is hopelessly inadequate. On the day I called it was with difficulty that sufficient water could be obtained for laundry requirements, and as the outside stock had trampled and muddled the spring, there was not enough clean water available to make tea for the children, I was informed.

By referring to my Diary for 1926, I find that on May 7th of that year the well-driller then at work reached a depth of 300'. I personally conducted a careful baling test at that time, and water was then baled at the rate of 416 gals an hour, at which rate it was found impossible to empty the well, there being 50' of water in the casing at the conclusion of the test. The well-driller and myself estimated the capacity of the well at fully 500 gals an hour, which was ample for all requirements. The drilling ended in a rock formation, and is cased all the way down, with perforations in the lowest 60' of casing which is 5", the rest being 5 5/8" diameter.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

Owing to some cause not yet established this well has been steadily falling off in production, and now only yields little more in 24 hrs than was originally obtained in one hour's pumping.

There is a weak spring coming out of the rocky depression in the side of a neighboring ridge 1000' distant from the school, which Mr. Fetterly thinks might be developed sufficiently to yield an auxiliary supply of water to the extent of approximately 70 gals an hour. He had the spring dug out to a depth of 6', and satisfied himself by actual test that this amount of water can be obtained. His proposal is to excavate and construct a concrete chamber at the source of said spring, into which chamber the water would be diverted and held by wing extensions and a clay retaining wall. The full details of the scheme will be seen in the drawings already forwarded to Ottawa from the Water Branch. This proposal has one point in its favor, viz that it deals with an existent and visible water supply. It would involve a 1000' trench 6' deep and pipe line and an additional pumping plant, in addition to the excavating and concrete work at the spring. As the spring seepage is out of a much disturbed laminated strata formation there is some slight danger of the water seeking other channels when held back sufficiently to form a head, and might break out beyond the confines of the proposed works. At best this is but a meagre water supply. Its estimated cost is put at \$2000.00 for the complete scheme.

My own impression is that it would be advisable to drill another well about 8' distant from the outside wall of the boiler room on the chance of tapping the water vein reached when the original well was drilled. I think there is a very strong probability, if not a certainty, that we can get this water again, though we may have to go a few feet deeper. We cannot deepen the present well owing to its being within the building. Then in the event of recovering the original water supply there should be a pump chamber provided, level with the boiler-room floor, with a doorway between, and roofed by a concrete slab extension of the adjoining coalbin roof, and with an iron door directly over the well. A drilling rig can be set up readily at the place indicated; and should it ever become necessary to do further work at this well, it would be accessible to the drilling rig at any time. This proposed location of the well and pumping chamber is exactly what has been done at the New Blue Quills School. The total cost should not exceed the estimate for developing the spring. The objection to drilling the suggested second well is that there is the element of chance, and in the event of failure to get water the outlay would prove useless, and recourse would then have to be to the spring. But all things considered, I incline strongly to the suggestion of drilling as stated, believing that the original ample supply of water can yet be recovered, and the Rev. Principal fully shares this view.

If I can be of any further service in this matter I shall be pleased to co-operate in any way desired by the Department.

I have the honour to be, Sir,

Your obedient servant

E. Gardner-Smith

Dear Reverend Father Provincial,

I beg to submit you these few lines about a very important matter concerning our school. You are well aware that our water supply has not been very satisfactory for the last three years: during that time, I have been corresponding with the Indian Department, pointing out this poor condition and asking to have it improved. Some experts have been sent here on different occasions, one after another, and they all agreed that something should be done indeed as soon as possible. Finally, in the spring of 1930, I was promised that the work would be done before the winter, but in the following October I was told that they had run short of money, and in order to remedy in some way the lack of sufficient water at the school and the danger of fire, they appointed a night watchman; they assured me at the same time that an item was already put in the Estimates for the purpose and that the work would be done this year as early as possible. In fact, two Engineers came, a good while ago, and made a plan to have an outside spring connected with the school: this is a long and hard work, since the spring is over a thousand feet from the house; it could have been done during the fine weather, but it is not started yet; the winter has arrived and it will be almost impossible to do it before the frost is out. In the meantime, we are suffering, the water condition is getting worse than ever, sometimes we cannot even have decent water to make tea, the sewer pipes have been blocked five times already during the last few months, etc; we can hardly store any amount of water in the pressure tanks and in a case of fire we have no way at all to fight it.

Mr. Gardner-Smith, who knows better than any body else the conditions of this location, came here again on the 7th of last month and suggested to the Department that the simplest and least expensive way to improve our water supply would be to have another well drilled by the house. I have nothing to say in that regard of course; but on the other hand I must state that, if the spring is connected with the school, all the ones who have been on the spot are wondering how it will be possible to prevent the dirt from seeping in from the surrounding hill and contaminating it.

Anyhow, something should be done at once: the situation has become too serious and too dangerous. Therefore, I have thought of writing you to-day and of asking you to urge the Department to take some action as soon as possible.

Yours sincerely in Xto & M.I.

J. L. Levern, omi. pr.

NOVEMBER 20 1931

Hon. Duncan Scott,
Deputy Superintendent General,
Department of Indian Affairs,
Ottawa, Ont.

Honorable Sir :

Here is a letter that speaks for itself; it comes from Rev. Father J.L. Levern, O.M.I., Principal of the Sacred Heart School, at Brocket, Alta. It reveals the unsatisfactory and indeed the very dangerous conditions of the water supply in that School.

I visited the place not long ago, I spoke the matter over with the Rev. Principal and I know that your Department is fully aware of the extreme shortage of water in that institution. Orders have been given at different times to study the situation and reports have been sent to Ottawa on the matter. I am of the opinion that the work should be done immediately, because every delay hampers the work of the staff, threatens the health of the children and in case of fire would be the cause of a total loss.

Mr Gardner-Smith advocated the drilling of a new well close to the School, and this is certainly the only way of assuring an ample supply of good and pure water. The spring referred to in Father Levern's letter would not, in my humble opinion, fill the purpose.

I hope, dear Mr. Scott, you'll pardon me for insisting so much on the immediate drilling of this new well; I think that by so doing I am giving you another proof of the keen interest I take in the beautiful work your Department is doing for the Indians.

Yours truly,

J. Langlois O.M.I.

November 24, 1931.

Dear Father Langlois:

I have your letter of the 20th instant, enclosing a communication from the Reverend Principal of the Sacred Heart Indian Residential School, relative to improving the water supply system at the school. The Department obtained a report from the Dominion Water Power and Hydrometric Bureau, through their Calgary office, recommending the enlargement of the original spring now in use and stating that a sufficient supply of water will then be available. Authority has been given to the Dominion Water Power Branch to proceed with the work of enlarging the spring and install the necessary pipeline and pump. The Department is informed that instructions have been given to place the work in hand.

Yours very truly,

Duncan C. Scott

DEPARTMENT OF THE INTERIOR
DOMINION WATER POWER AND HYDROMETRIC BUREAU
Calgary, Alberta,

Nov. 18, 1931.

Specifications of Proposed Works in connection
with the construction of an Auxiliary Water System at Sacred
Heart School Peigan Reserve, Brockett, Alberta.

General.

The works comprised in the construction of the
proposed water supply works are to be carried out to the
satisfaction of the Commissioner of Irrigation, and only
material of the best quality is to be used.

Location.

The school is situated about 5½ miles south-east
of Brockett, and can be reached by a trail from the Railway
Station at the town. No difficulties will be met in freight-
ing.

Nature of Works.

The works consist of improvement of a spring
situated 1000 feet east of the school, a trench and pipe
line from said spring to the school and a shallow well pump
to be located in the boiler room. Connections are also to
be made between the pump and the existing pressure system.

The contractor will be liable for personal
injuries or injury to stock during construction and shall free
the Department of Indian Affairs from all responsibility
from claims arising therefrom.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

Improvement Works at Spring.

The bottom of the coulee is to be excavated to a depth of nine feet below its present level for the width shown on the attached plan. The contractor must satisfy himself as to the nature and quantity of the material to be excavated, and to provide himself with the necessary equipment. He must also make provision for disposal of the inflow from the spring during excavation and construction.

The concrete in the tank shall consist of clean screened gravel, clean sand with the addition of Portland cement in the proportions of one part cement, three parts sand and five parts gravel, except the top slab of the tank which will consist of one, two and four parts, respectively.

The ends of the reinforcing rods should be wired together where feasible.

Two wing walls, constructed of two thicknesses of one-inch boards with lapped edges will be constructed from the tank and two shorter plank walls will be constructed at the rear against the sandstone ledge. The space thus created will be filled with rock for 7'6" depth, then 6" of rock and gravel, 6" of gravel and 6" of sand spread over all.

A layer of clay four feet thick will be placed on the outside or north side of the wing walls for the entire width to the height of the tank. An earth fill will be placed over all to the height of the manhole and six feet wider than the tank on all sides, sloping to the sides and bottom of the coulee at a slope of $1\frac{1}{2}$ to 1. The stones, etc., on the inside and clay on the outside will be placed simultaneously.

The overflow pipe is to be protected by stones

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

throughout its length to the pile of stones and manure at the outlet.

The bottom of the space between the wing walls should be puddled with six inches of clay.

The Trench and Pipe.

The trench will have an average depth of 6'6" to 7'.0" and about 950 feet long. The 2" supply pipe should be primed and painted with an approved water-proofing paint before laying and should be rendered water-tight. Paint worn off by handling should be renewed.

The Pump

The pump shall be installed in the boiler-room, at the location shown on the plan. It shall consist of a Fairbanks-Morse Typhoon Pump, Outfit No.6001-M, or other approved make, delivering 600 U.S.gallons per hour. This pump shall be connected with the new 2" supply pipe from the spring and the existing pressure system by means of a 2" pipe and check valve. The pump shall have an air attachment and be started by hand and stopped automatically.

The pipe system, before covering, should be tested by subjection to a water pressure of 50 lbs. per square inch.

All work is to be performed in a thorough and substantial manner, and to the approval of the Commissioner of Irrigation, Water Power and Hydrometric Bureau, Department of the Interior, Calgary, Alta.

The works herein specified are to be completed

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

ARCHIVES PUBLIQUES
CANADA

4.

within thirty days of the signing of the contract.

A certified cheque for 10% of the bid shall accompany the tender. This cheque will be returned if the tender be rejected. The lowest or any tender shall not necessarily be accepted.

Payments.

Payment will be made as soon as the works are completed and both work and material are found to be satisfactory.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

Mr. J. S. Tempest
Commissioner of Irrigation,
Calgary,

Dear Sir,-

I thank you for your letter of the 18th inst.
referring to the Auxiliary Water Supply System at the
Sacred Heart Indian School at Brocket.

I will provide all the material and labor,
as shown on the plan and specifications for the complete
water system, and I will see that the work is done in
a thorough workmanlike manner, and that all the material
to be used on the work comply with your specifications.
For the consideration of Two Thousand, Seven Hundred and
Thirty Four Dollars (\$2734.00)

In reply to your letter of the 20th inst. I can
supply the pump and one thousand feet of two inch
galvanized pipe, for Six hundred and twelve dollars (\$612.00)

If I am successful in receiving this contract,
which I will endeavour to fulfil in the time specified
weather permitting, you can rest assured that I will give
this, as I have given the other contracts that I have
received from the Indian Department, my own personal care
and attention.

Your obedient servant,

(sd) Stanley Pearson.

Dominion Water Power and Hydrometric Bureau

Calgary, Alta. November 27, 1931.

Sir,-

This will acknowledge receipt of your telegram of the 26th instant, in answer to mine of the same date regarding the tenders submitted by four contractors of the six mentioned in your letter of the 14th instant, for prices of pumping equipment, pipe line and labour in connection with the proposed Auxiliary Water Supply of Sacred Heart School, Peigan Reserve.

I am sending copies of each tender to you for inspection.

I might state that apparently the majority are not capable of interpreting blue prints correctly. They do not know for instance, that storage batteries require a Direct Current motor which costs \$30. more than a single phase motor, or that the elbows, etc., shown on the plan, are included in the contract.

Geo. H. Scougall's tender includes the correct equipment for \$660 but does not include the remainder of the contract. He stated over the phone that he would not bid on labour, etc.

W.G. Andrews bid an inclusive amount of \$550 without specifying details. It appears evident that he did not include all equipment in his computations.

McRoberts Company tendered on black (he probably meant iron) pipe, while galvanized pipe is specified. He also tendered on one check valve only. This, together with a device for starting the motor automatically - a magnetic switch - was mentioned in the specifications; but elbows, reducers, etc., were indicated on the plans. He also apparently tendered for a single phase motor instead of a D.C. Motor.

S. Pearson sent a bid for the entire contract for \$2734 together with an alternative bid for equipment alone for \$612. He also probably bid on a single phase motor in the latter bid.

The inclusive bid is probably based on the fact that we are now in the winter season with snow and zero weather present.

The season is now far advanced. Many difficulties and much expense would be encountered if the material were purchased and the work done by day labour which would necessitate

2.

the constant attendance of an engineer or skilled foreman, or both, I deduce from your letter of 14th instant that you intended to follow this method.

The prices obtained by this office from the Fairbanks-Morse Co. for the equipment aggregates \$631.

I would recommend that the inclusive tender of S. Pearson, for \$2734, be accepted. You will note from his letter, copy of which is enclosed, that he has had other contracts with the Indian Department.

Memorandum:

Mr. Buskard

For some time past the water-supply system for the Sacred Heart Indian Residential School on the Peigan Reserve has not been adequate for this institution. The Dominion Water Power Branch, through their Calgary office, were asked to investigate and submit a report and recommendation. This has been received, and in order to make the supply adequate it will be necessary to improve the original spring now in use. If this is done a sufficient supply of water will be available. Additional pumping equipment and pipe line will be required. The cost of this improvement is estimated at \$2040.00. In this year's estimates \$3,000.00 has been provided for the work. We are now going to make the necessary change in this water-supply system. The work will be done under the supervision of the Water Power Branch, but I think I should ask for the names of firms where necessary purchases in this connection may be made. It is possible that some of the Peigan Indians may be employed as labourers, but I should know where to secure any extra labour required.

Dec. 7, 1931.

Memorandum:

Approved
Dr. Scott.

The Dominion Water Power Branch investigated and submitted a report for an adequate water supply for the Sacred Heart Indian Residential School on the Peigan Reserve.

On Nov. 7th you furnished me with the names of firms from whom prices were to be obtained, and I forwarded this information to the Dominion Water Power Branch, advising that the Department approved of having the work carried out, and that prices were to be obtained from the firms submitted, also that Mr. Geo. H. Scougall of MacLeod should be consulted as to any labour required.

A letter has now been received from the Director of the Dominion Water Power Branch, in which he encloses copies of prices received, and recommends that the work be carried out by S. Pearson as he has quoted a price for all of the work required. I concur in his recommendation.

DOMINION WATER POWER AND HYDROMETRIC BUREAU

OTTAWA, ONT., December 15, 1931.

Sir:

I have received your letter of the 11th instant with reference to improvements to the water supply for the Sacred Heart Indian Residential School on the Peigan Reserve, and have accordingly instructed the Commissioner of Irrigation to arrange to have this work carried out by S. Pearson of Pincher Creek at the price of \$2,734. as quoted in his letter of November 24th.

Your obedient servant,

J. T. Johnston,
Director.

DEPARTMENT OF THE INTERIOR
DOMINION WATER POWER AND HYDROMETRIC BUREAU
Calgary, Alta.,
Nov. 18, 1931.

Specifications of Proposed Works in connection with
the construction of an Auxiliary Water System at Sacred Heart
School, Peigan Reserve, Brockett, Alberta.

General.

The works comprised in the construction of the
proposed water supply works are to be carried out to the
satisfaction of the Commissioner of Irrigation, and only
material of the best quality is to be used.

Location

The school is situated about $5\frac{1}{2}$ miles south-east
of Brockett, and can be reached by a trail from the Railway
Station at town. No difficulties will be met in freighting.

Nature of Works

The works consist of improvement of a spring
situated 1000 feet east of the school, a trench and pipe
line from said spring to the school and a shallow well pump
to be located in the boiler room. Connections are also to
be made between the pump and the existing pressure system.

The contractor will be liable for personal
injuries or injury to stock during construction and shall free
the Department of Indian Affairs from all responsibility from
claims arising therefrom.

Improvement Works at Spring

The bottom of the coulee is to be excavated to a

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

depth of nine feet below its present level for the width shown on the attached plan. The contractor must satisfy himself as to the nature and quantity of the material to be excavated, and to provide himself with the necessary equipment. He must also make provision for disposal of the inflow from the spring during excavation and construction.

The concrete in the tank shall consist of clean screened gravel, clean sand with the addition of Portland cement in the proportions of one part cement, three parts sand and five parts gravel, except the top slab of the tank which will consist of one, two and four parts, respectively.

The ends of the reinforcing rods should be wired together where feasible.

Two wing walls, constructed of two thicknesses of one-inch boards with lapped edges will be constructed from the tank and two shorter plank walls will be constructed at the rear against the sandstone ledge. The space thus created will be filled with rock for 7'6" depth, then 6" of rock and gravel, 6" of gravel and 6" of sand spread over all.

A layer of clay four feet thick will be placed on the outside or north side of the wing walls for the entire width to the height of the tank. An earth fill will be placed over all to the height of the manhole and six feet wider than the tank on all sides, sloping to the sides and bottom of the coulee at a slope of $1\frac{1}{2}$ to 1. The stones, etc., on the inside and clay on the outside will be placed simultaneously.

The overflow pipe is to be protected by stones throughout its length to the pile of stones and manure at the outlet.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

The bottom of the space between the wing walls should be puddled with six inches of clay.

The Trench and Pipe

The trench will have an average depth of 6'6" to 7'0" and about 950 feet long. The 2" supply pipe should be primed and painted with an approved water-proofing paint before laying and should be rendered water-right. Paint worn off by handling should be renewed.

The Pump

The pump shall be installed in the boiler-room at the location shown on the plan. It shall consist of a Fairbanks-Morse Typhoon Pump, Outfit No.6001-M, or other approved make, delivering 600 U.S.gallons per hour. This pump shall be connected with the new 2" supply pipe from the spring and the existing pressure system by means of a 2" pipe and check valve. The pump shall have an air attachment and started by hand and stopped automatically.

The pipe system, before covering, should be tested by subjection to a water pressure of 50 lbs. per square inch.

All work is to be performed in a thorough and substantial manner, and to the approval of the Commissioner of Irrigation, Water Power and Hydrometric Bureau, Department of the Interior, Calgary, Alta.

The works herein specified are to be completed within thirty days of the signing of the contract.

A certified cheque for 10% of the bid shall accompany the tender. This cheque will be returned if the tender be rejected. The lowest or any tender shall not necessarily be accepted.

Payments

Payment will be made as soon as the works are completed and both work and material are found to be satisfactory.

Stanley Pearson.

Dominion Water Power and Reclamation Service

Calgary, Alta., Dec. 22, 1931.

Sir,-

I beg to inform you that, immediately on receipt of your letter of the 14th instant, authorizing construction of proposed water supply for the Sacred Heart School on the Peigan Indian Reserve, I instructed Mr. Fetterly to proceed with the work.

He proceeded to Brockett on December 18th and, after explaining details to the successful contractor, Stanley Pearson, who is very intelligent and accustomed to this kind of work, laid out the work with his assistance.

The weather is fine at present and the work should go ahead with despatch.

Mr. Pearson began construction on the morning of December 21st with about ten men. He had evidently made a close study of the plans. Hard snow lies in the coulee to a depth of from two to six feet. This will have to be cleared away but is included in the contract. Mr. Pearson intends to concentrate on the coulee section while the weather holds.

Mr. Pearson requested information regarding interim payments and was informed that they would be dealt with in the usual way.

Father Laverne, the Principal, is exceedingly well pleased with the fact that construction is started.

I am enclosing two copies of the specifications duly signed by Mr. Pearson, no formal contract being necessary, in accordance with your letter of the 14th instant.

You will be kept informed of the progress of the work.

Your obedient servant,

(Sgd.) J. S. Tempest,
Commissioner of Irrigation.

R
Honorable D.C. Scott,
Supt. Gen. of Indian Affairs.
Ottawa.

Honorable Sir,

I beg to call again your attention to the condition of water supply at the Indian School, Brocket, Alberta. I understand that a certain Mr. Pearson had lately started some work at the spring near the school site, but owing to weather conditions was obliged to discontinue, and would not resume till next summer.

The Rev. Principal informs me that at times, for several days, there is not a drop of water to be got from the present well. You easily realize this very deplorable situation in an Indian Residential School, being without a supply of water for heating, cooking, laundry, sanitation, fire-protection, etc.

I know that this very serious matter has been brought to the attention of the Department at different times, and I am aware that Engineers from Calgary had worked on some plan to secure a greater supply of water, since May 1931; but unfortunately nothing was practically done till the beginning of the winter, with the result that everything is again at a stand-still.

Therefore I beg to inquire what the Department intends to do for immediate relief to this precarious situation. In submitting this matter to your serious consideration, I do so in the interest of the School and of the Indian Department.

I remain, Honorable Sir,

Yours respectfully,

H. Langlois O.M.I.
Provincial.

Dear Mr. Johnston:

I wish to refer to your 41167 of the 28th ultimo, with reference to the water supply for the Sacred Heart Indian Residential School. There is a report that the contractor has discontinued work and does not intend to resume until next summer. If Mr. Tempest's office can do anything to expedite this work under the terms of the contract, this Department would be grateful.

Yours very truly,

Duncan C. Scott

EX-10

January 18, 1932.

Dear Father Langlois:

I have your letter of the 13th instant, with reference to the water supply at the Sacred Heart Indian Residential School. The Department has received a report to the effect that the contractor began construction with 10 men on the morning of December 21st. The contract includes the clearing away of snow from the valleys where the supply pipe will lie. It is understood that the valley section will be undertaken first, while the weather remains mild, as it was when the work started. The Department's information is that the work would be carried on as fast as weather would permit. In the meantime, it may be necessary for the Reverend Principal to arrange to have water drawn to the school. I am writing to the Dominion Water Power Branch, with a view to seeing that the work is proceeded with whenever possible.

Yours very truly,

over

Duncan C. Scott

Dear Dr. Scott: *Noted*

I have received your letter of the 18th instant with reference to the water supply for the Sacred Heart Indian Residential School, in which you mention that there is a report that the contractor has discontinued work and does not intend to resume until next summer.

We have had no information in regard to this project since Mr. Tempest's letter of December 22nd, copy of which was sent to Mr. MacInnes on December 28th. According to this report the work appeared to be well under way, but I have written to Mr. Tempest sending him a copy of your letter and asking him to do everything that is necessary to expedite this work under the terms of the agreement with the contractor.

Your obedient servant,

J. T. Johnston

Dominion Water Power and Hydrometric Bureau

Calgary, Alta.,
January 20, 1932.

Sir,-

Please be advised that I have received a letter from S. Pearson, Contractor, of Pincher Creek, Alta., with reference to the progress of construction on the Auxiliary Water Supply System at Sacred Heart School on the Peigan Reserve near Brocket, Alta.

He states that the bad weather has retarded the work. He began construction on December 21 by removing fifteen feet of snow from the spring. He then constructed a fence 250 long by 4 feet high, probably to the south west. This was found on January 18th to be largely effective in holding the snow.

The lumber, cement, reinforcing iron, etc., has been hauled to the School. The discovery and hauling of rock and gravel is rendered difficult by snow and snowdrifts.

He has begun construction at the spring and will work towards the School, testing as he advances.

It is obviously impossible to enforce the time limit because of the heavy falls of snow and below-zero weather which has occurred. Mr. Pearson is advancing the work as fast as is possible. His letter finishes as follows:- "I will let you know in the near future how the work is progressing, and I expect to have considerable of the work done at the spring, for you to inspect".

Mr. Fetterly will make the first inspection very shortly.

Your obedient servant,

(Sgd.) J. S. Tempest,
Commissioner of Irrigation.

February 8, 1932.

Sir,-

I beg to inform you that an inspection was made of progress on construction of the Auxiliary Water Supply System at Sacred Heart School, Peigan Reserve, near Brocket, Alta., by P.A. Fetterly of this Bureau, on February 2 and 3.

He reports conditions to be as follows:

Weather Conditions

The weather from Dec. 21 until the present (February 8) has been cold and stormy, the thermometer standing below zero almost continuously. The inspection was made in a blizzard. Operations for the first two weeks were confined entirely to removing the accumulated snow with which the coulee was filled to a depth of fifteen feet.

Work Days

The contractor was instructed on December 19 to begin work, which he did on Dec. 21 with six men. They worked from Dec. 21 to 31 and Jan. 20 to 29. Blizzard conditions and temperature were too severe from Jan. 1 to 20 to work. The temperature fell to 20° or 30° below zero on Jan. 29, and has continued to a modified extent to the present. The men could work only half the time while on the job. The pump and hose for draining the excavation became frozen if pumping ceased for a minute. If the fair weather of Jan. 29 had continued one more day the forms and concrete could have been prepared.

Work Completed. (Temporary)

A temporary fence 450 feet long and 4 feet high was built on the west and south sides about 150 feet from the spring. A snowbank 50 ft. wide and 5 ft. high has formed on the inside of the fence, which is being continuously replenished by fresh storms and drifting. The coulee itself, however, is now being kept reasonably clear. Everything in

the vicinity of the spring is frozen. A temporary fence is erected around the excavation every time it is temporarily abandoned.

Work Completed. (Permanent)

1. Reinforcing Steel, now on the location, Value	\$38
2. Lumber " " " " " "	80
3. Excavation. An excavation 40 ft. by 4 to 13 ft. by 8 or 9 feet deep, has been made at the Spring. The material consisted of sandstone and shale. A clay ledge was found at 6 ft. depth,	
90 cu.yds.	110
4. Stone. 26 cu.yd. of clean rock have been gathered. Some of this is placed.	40
TOTAL.	\$268

Progress of the Work

Mr. Stanley Pearson, the Contractor, of Pincher Creek, Alta., has paid out about \$250 in wages, a considerable amount of which is for snow removal, and snow fence. He has paid out over \$400 altogether. He has no intention of ceasing work until summer. Delay is caused entirely by bad weather. Mr. Pearson stated candidly that he did not know how soon the pipeline could be completed. The frost has penetrated at least three feet since November 24, the date of his estimate, due to lack of snow cover. The frost was then at 8 inches. It would cost him \$2000 to excavate the trench now.

In addition, if concrete were poured, and a trench were excavated and backfilled with frozen soil, during the existing cold weather, faulty construction would surely occur. It was very evident that Mr. Pearson is trying to do everything possible under adverse conditions and is working against great difficulties. It is obviously impossible to force him to finish during a time limit.

Father Laverne's Statement

Father Laverne, the Principal, stated that he was quite satisfied that it was impossible to continue the work during the very cold weather and was surprised at the amount done under the prevailing conditions. He stated that in his belief it would be impossible to excavate the trench until the frost withdrew from the ground. He can continue drawing the water from the spring in barrels as before, until the pump is installed.

However, he is much concerned with the fire hazard. He states that he had a night watchman last year to

3.

minimize the fire hazard and to look after the heating system, but that this is not the case at present.

He states that the complaint regarding non-completion of the work probably came from the Oblate Superior in Edmonton, who was apparently concerned with the fire hazard.

Conclusions

The delay in completion is not due to the contractor. He has carried on as well as can be expected, in the opinion of Father Laverne and myself. He can only work in fair weather, but he does expect to do this. Winter equipment for handling concrete and excavation is expensive and only of practical use on a large project.

Recommendations

It is recommended that an interim payment of \$200 be made to Mr. Pearson for the material hauled and the work completed to date.

The matter of a night watchman is left entirely in the hands of the Indian Department. Father Laverne requested that it be mentioned in this communication.

I am enclosing a certificate of work done and interim recommendations for payment.

Your obedient servant,

J. S. Tempest

Sacred Heart Indian Residential School, Brocket, Alta,
March 23, 1932.

The Honourable Duncan C. Scott,
Deputy Supt. General of Indian Affairs,
Ottawa.

Dear Sir,

I beg to address you these few lines in connexion with the work which has been authorized and is already started to improve the water supply at our school.

Four years ago, we built a dam across the coulee at a little distance from the spring in order to gather all the water running from it and to form a pond for our stock. This artificial pond has given perfect satisfaction: our horses and cattle have always found there sufficient water to drink, and we never had to pump for them. But now that the spring is going to be piped to the school, we will lose that outside supply, the pond will be dry very soon, and we will have to pump for the stock as well as for the house.

Therefore there must be a special pipe line from our pressure tanks to a certain place in the field or the yard, where the water can be pumped into a trough, and I beg to make the present application for this extra work. I understand indeed that times are hard and money scarce; but on the other hand I must say also that the fact of losing this pond and being obliged to pay much heavier gasoline bills from now on is already such a great disadvantage that I feel quite justified in asking for this supplementary expenditure.

This pipe line may be laid along the other pipe line in the same trench: it will take about seven hundred feet of $\frac{3}{4}$ " pipe costing \$10.50 a hundred feet, a few elbows and other fittings and two taps, and a 16 foot trough made of 2 x 10" planks that will cost between nine and ten dollars. Consequently I do not believe that the whole installation will cost much more than a hundred dollars, if it is done with the present work.

Feeling confident that you will be able to make provision for this needed expenditure, and thanking you again most sincerely for the numerous past favours, I remain, dear Sir,

Yours respectfully,

J. L. Lavern O.M.S.
Principal

Mr. R. T. Ferrier,
Superintendent of Indian Education,
Department of Indian Affairs,
Ottawa.

Dear Mr. Ferrier,

I am sending you a letter signed by Rev. Father Levern and sent to me by Rev. Father Langlois for the Department. Rev. Father Langlois approves the letter and speaks of the trouble caused at the Sacred Heart School by the lack of convenient water supply. As the work on the piping from the spring is now going on, he suggests that a telegram could perhaps be sent to the contractor concerning the additional pipe.

Yours very truly,

F. X. Marcotte, O.M.I.

Mr. J.S.Tempest,
Commissioner of Irrigation,
Calgary, Alta.

Dear Sir,-

In reply to your letter of March 31st, re the Water System at the Sacred Heart School, Bocket, I went back to work on the 30th and if the weather stays fine for about a week we will have considerable work at the spring done. I have all the material on the job, with the exception of the gravel, and the pump. I expect to have the pump in about one weeks time, and the gravel also if the weather stays fine so we can haul.

When Mr. Fetterly comes down, will you ask him to bring his level? so I can get the grade for the pipe line correctly.

I can assure you that I am going ahead with the work, now that the weather has broken, as quickly as possible, and if the weather stays fine expect to finish the contract by the end of the month.

Yours truly,

(SGD) STANLEY PEARSON.

Ref. 122839 W.

L/F.

File No. 4919

Department of the Interior
Canada
Dominion Water Power and Hydrometric Bureau

Calgary, Alta., April 16, 1932.

Sir,-

Please be advised that Mr. Fetterly found it imperative that he inspect the works in connection with the Auxiliary Water Supply System at Sacred Heart Indian School on the Peigan Reserve near Brocket, Alta., during the present week. The Contractor stated by letter that he wished to obtain the exact location of the pipe trench and the depth of the pipe at intervals along the 940 feet of pipe immediately. Although no expense money was available, a trip was absolutely necessary. Mr. Fetterly, in the absence of orders, but after consultation with me, proceeded to Brocket on April 14th, paying his own expenses with the hope that he would be reimbursed by the Indian Department.

He made an inspection of the work, gave Mr. Pearson the necessary instructions, grades, etc., and returned to Calgary on April 15th.

He ascertained that Mr. Pearson is very conscientiously completing an excellent piece of work. The development of the spring is completed with the exception of the earth covering. About half of the trench has been excavated and a portion of the pipe laid. All of the material is on the ground with the exception of the pump which is now on its way from Winnipeg and should arrive within a day or two.

The flow of the spring is even now more than was estimated owing to the method of development and should amount to at least 2000 gallons per day. It rose 24 inches in the tank and reservoir during the 24 hours during which Mr. Fetterly was present.

Father Laverne is now enthusiastic regarding the general development although at the time the design was prepared he was sceptical of the use of the spring as a source, the design and size of the tank, etc., Mr. Fetterly is completely satisfied with the general results.

The installation should be completed within three weeks at the latest, although Mr. Pearson stated that he could probably finish by the end of April.

The Director,
Water Power & Hydrometric Bureau,
Department of the Interior,
Ottawa.

2.

It will, of course, be necessary to inspect the completed works, consequently I would suggest that a request be made to the Indian Department for an advance for expenses of Thirty dollars (\$30) for the visit of this week and the next and last trip.

As Mr. Pearson has spent a large amount of money to date in material and wages, I am enclosing a certificate for interim payment to be made immediately, comprised as follows:-

Concrete tank	\$300
Excavation	120
Stone and gravel fill	50
Clay Fill	40
Lumber	80
Manhole Cover	5
Trench	125
Paint & primer for pipe	10
Painting pipe	10
950' pipe @ 31.69 per 100'	316.90
	<u>\$1056.90</u>

As an interim payment of \$200 has already been made I would suggest that an immediate additional payment of six hundred dollars (\$600) be made as per enclosed certificate.

Your obedient servant,

(Sgd.) O. H. HOOVER,

Acting District Chief Engineer.

OTTAWA, ONT., April 27th, 1932.

Sir,

Referring to my letter of February 15th, 1932,
regarding the installation of the water supply system at the
Sacred Heart Indian Residential School on the Peigan Reserve,
I enclose copy of a letter dated April 16th received from
Mr. O.H. Hoover, the engineer now in charge of the Calgary
district of our Bureau, reporting further progress on this
work.

The progress certificate, in duplicate, men-
tioned in Mr. Hoover's letter, is enclosed herewith, show-
ing a further payment of \$600 to be due the Contractor,
Stanley Pearson, of Pincher Creek, Alberta. Will you
kindly arrange payment of this amount direct to Mr. Pearson.

It will be further noted from Mr. Hoover's
letter that Mr. Fetterly of his staff has made one trip
this fiscal year to the work, and a further trip will be
necessary to inspect the completed work. Mr. Hoover asks
that he be advanced \$30.00 to cover costs of these trips,
and provided his request meets with your approval, I would
ask that a cheque in Mr. Hoover's favour for the above
mentioned amount be forwarded to the undersigned for
delivery.

Your obedient servant,

J. T. Johnston,
Director.

OTTAWA, ONT.,

May 27, 1932.

Sir,-

Attention Mr. N.C.Allen

I have received your letter of the 26th instant with reference to accountable advances to meet travelling and other emergency expenditure of officers of this Department, while engaged in work for the Department of Indian Affairs, together with cheques for the following amounts:

C.E.Webb.....	\$200.00
O.H.Hoover	50.00
D.B.Gow	50.00

It is noted that these advances are to be operated on the Imprest System, vouchers for any expenditure being submitted monthly, classified in accordance with the approved objects of expenditure.

In this connection I beg to refer you to my letter of April 27th in which a request was made that an advance of \$30. be made to Mr. O.H.Hoover for travelling expenses incurred in connection with the installation of the water supply system at the Sacred Heart Indian School on the Peigan Reserve. In view of the advance of \$50. now made to Mr. Hoover, it will not be necessary to give him an additional \$30. to cover this particular expenditure, as he will be asked to submit his accounts in accordance with the arrangement which is now being made to meet an expenditure of this nature.

I would also draw your attention to my letter of May 17th enclosing account received from D.B.Gow amounting to \$18.05 covering expenses in connection with a trip to Kenora to examine the condition of the sewage system at the Roman Catholic Indian School there. Are these accounts in a form satisfactory for payment, or would you prefer them to be resubmitted to conform with the classification of sub-allotments approved by the Treasury Board.

Your obedient servant,

J.T. Johnston,
Director.

File 4919

Final Report
on
Auxiliary Water Supply
at
Sacred Heart Indian School
Peigan Reserve, Brocket, Alberta,
by
P. A. Fetterly
Assistant Hydraulic Engineer.

Purpose of Report.

The purpose of this report is to describe the completed installation of the Auxiliary Water Supply System at the Sacred Heart Indian School on the Peigan Reserve near Brocket, Alberta. The inspection was made on May 11 to 13, 1932, immediately after completion of the contract.

Works

The works consist of the construction of a concrete collecting tank joined to a rock-filled tank at the spring, a 2½ inch pipe line 950 feet long in a trench with an average depth of 6.6' and a Typhoon shallow well pump at the school rated at 600 gallons per hour. It also included connections with the existing pressure system.

Tank at the Spring

A description of the spring improvement is contained in the report dated September 11th 1931. The concrete tank is well and strongly constructed according

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

to the plans. The concrete mixture is richer than was demanded in the specifications. The reinforcement is also according to specifications. The rock-filled portion is filled with clean rocks, stones and gravel collected in the field. The sandstone and shale from the excavation was not used. The collecting pipes and overflow pipe were placed. The lumber was used as detailed in the plans and specifications. The clay and earth fills were also constructed. The whole of this portion of the contract was completed in a workmanlike manner, the Contractor taking a great deal of pains. The water enclosed by the tank is clear and clean.

The capacity of the tank at the spring between the check valve on the outlet pipe and the overflow pipe is over 6000 gallons, equal to more than three days' run of the spring. This amount should be ample for all purposes and should provide a reserve supply for fire or other emergency necessities. The water rises in the spring tank about 18 inches per day if none be used.

Pipe Line

A trench 950 feet long was excavated to an average depth of 6'6" from the spring tank to the pump at the school. The pipe is primed and painted and all joints carefully made. An extra 3/4" pipe was laid in this trench from the school to the hog corral with two stand pipes for watering the stock. This latter pipe was laid at the request of Father Laverne, the Principal, and

was not included in this contract. It was purchased by the school at no expense to the Indian Department. This trench is now filled in, a ridge one foot high being left to compensate for future settling of the earth.

The Contractor drew the water along the pipe by means of a hand pump during construction in order to disclose any leaks which might exist. The progressive tests were successful.

Pump at the School

A Typhoon shallow well pump, rated at 600 U.S. gallons per hour, is installed in the Boiler Room. This is connected by means of pipes to the existing pressure system in the engine room. The pump was first used on the evening of May 11, and, the pressure tanks being nearly empty, they were filled at a computed rate of nearly 750 Imperial gallons per hour.

An automatic stop switch is installed. The maximum at present is set at 49 pounds. The starting will be done by hand, i.e., by manipulation of a switch. The pump is driven by a 1 h.p. motor actuated from the existing power system.

The pump being located in the boiler room under the steps, it was suggested to Father Laverne that he enclose the installation in order to protect the machinery of the pump. This was not included in the contract as the cost could be met by causing the school engineer to do this in his spare time.

Extras

The Contractor was instructed at the beginning of

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

the work that no extras would be allowed as everything necessary was included in the plans and specifications. This rule was adhered to with one exception. The relief valve and gate valve used in connection with the deep well pump were expected, at the time the design was prepared, to act for both pumps. The writer was advised, however, on good authority, that these relief valves frequently wear out and need replacing. If these existing valves had been used for both systems it would be found that water from the spring pump would be liable to be driven into the deep well, if and when the deep well relief valve leaked. Consequently the Contractor was instructed to install extra valves between the new pump and the pressure tanks at a cost of \$11.75 as shown on the certificate. The invoice, duly "O.K'd" is attached.

Another possible necessary extra consists of a gate valve on the horizontal line of pipe in the spring tank just above the elbow and nearer the pump. This may be needed if the vertical section of pipe is ever disconnected to replace or repair the check valve near the bottom of the spring tank, in order to prevent the pipe from being emptied of water while being repaired. This, however, should not be needed for a long time and is not absolutely necessary as the pipe could be plugged.

The Deep Well

This well appears to have almost entirely failed. The School Engineer pumped at this well for 1½ hours on the evening of May 11 and did not obtain a drop of water.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 2)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

5.

The reason for this is not known. The bottom of the casing may be filled up or the water supply may have disappeared, probably the former. However, removal of the pipe and examination of the well would be expensive with no guarantee that it would not occur again. The deep well has been sunk for a few years only. This deep well may recover in time and some water should always be available from it.

The pressure tanks were empty when the shallow well pump began to function. The school authorities were drawing nearly all their water from the spring in barrels. If the writer had recommended the sinking of another deep well near the school, as he was advised by several interested parties, it might function in a similar manner to that of the present deep well. They now have an abundant visible supply of good water, easily accessible, for school and stock. Father Laverne has one objection to the system, viz: that the large open reservoir between the dam and the spring will not receive as much water as formerly through the overflow pipe. The answers to these objections are obvious. The final inspection was made on May 12. The delay in sending a final certificate is due to the necessity for proving the efficiency of the work during a period of time.

Recommendations.

I would recommend that Stanley Pearson, of Pincher Creek, Alberta, the Contractor, be paid the final

sum of One thousand Nine Hundred and Forty-Five Dollars and seventy-five Cents (\$1945.75) being the balance due on completion of his Contract. This sum, together with a certificate for \$200 issued on February 8, 1932, and one for \$600 issued on April 23, 1932, comprises the total contract price of \$2734.00, together with extras of \$11.75 as per enclosed invoice, in triplicate, duly "O.K'd".

(SIGNED) P. A. FETTERLY.

Your file 116-2-5.

Sir,

In further reference to my letter of April 27th regarding the installation of the auxiliary water supply system at the Sacred Heart Indian Residential School on the Peigan Reserve, I enclose herewith a report describing the system as constructed, signed by P.A. Fetterly as inspecting Engineer, together with copy of a letter from the Principal of the school, Father Laverne, stating that the work is satisfactory. There is also enclosed, in duplicate, final certificate covering the payment to the Contractor, Stanley Pearson, of \$1,945.75. The amount of the contract was \$2,734.00, and there is only one item for extras, amounting to \$11.75, for a relief valve and gate valve, the necessity for which is explained in Mr. Fetterly's report. A voucher, in triplicate, covering this extra is enclosed. I beg to recommend that the final payment on this contract be made to Mr. Pearson, in accordance with the certificate herewith.

Your obedient servant,

Ottawa, 18th August, 1932.

Sir,-

In reply to your letter of the 12th instant, with enclosure, I beg to say that the Dominion Water Power Branch of the Department of the Interior, acting for this Department, has dealt with the matter of the auxiliary water supply system, at the Sacred Heart Indian Residential School, Peigan Reserve, the contract in connection with which was awarded to Mr. Stanley Pearson.

I may add that the order, signed by Mr. Pearson, which accompanied your letter quoted, is being sent to the Department of the Interior, with a view to action thereon being taken, and no doubt you will hear from that Department in the matter at an early date.

Your obedient servant.

A. F. MacKenzie

With Enclosure.

Ottawa, 18th August, 1932.

Sir,-

I beg to bring to your attention your letter of the 15th June, and previous correspondence, regarding the installation of the auxiliary water supply system at the Sacred Heart Indian Residential School, Peigan Reserve. With that letter you enclosed final certificate covering payment to the contractor, Mr. Stanley Pearson of \$1,945.75, a cheque, No. 8647, for which amount went forward on the 22nd July.

The matter is referred to now because of the receipt at this Department of a letter dated the 12th instant, from the Royal Bank of Canada, Pincher Creek, enclosing an order signed by Mr. Pearson, on this Department, which reads as follows:- "This will be your authority to forward direct to the Royal Bank of Canada, Pincher Creek, Alberta, to be placed to my credit there, my certified cheque for Two hundred and seventy-three 50/100 (\$273.50) in favour of yourselves representing 10% of contract re Sacred Heart School, Peigan Reserve."

As this matter has been dealt with throughout by the Dominion Water Power Branch of the Department of the Interior, I beg to transmit the order mentioned, and shall be glad if you will see that the matter is finally adjusted.

Your obedient servant.

A.F. MacKenzie.

IN YOUR REPLY QUOTE THIS FILE NO.

OTTAWA, October 26th, 1932.

Dear Sir:

I am enclosing an account in duplicate for \$191.13 received from the Engineer in charge of the Dominion Water Power and Hydrometric Bureau, Calgary, covering the services of one Engineer, P.A. Fetterly, employed on work for the Department of Indian Affairs from April to September, 1932.

This account has been checked and found correct. Will you kindly forward cheque in favour of the Receiver General for the above amount at your earliest convenience.

Yours truly,

116-2-5.

Ottawa, December 7, 1932.

Sir:

The Reverend J. L. Levern, O.M.I., Principal of the Sacred Heart Indian Residential School, who visited the Department today, discussed the question of fire hazard at the school.

In the case of several of our residential schools, the Department has provided a grant, at the rate of \$40 per month, towards the salary of a night watchman. Father Levern has been instructed to engage a competent man as night watchman and the Department has agreed to allow him a grant at the above rate for the watchman's services during the winter months, from, approximately, October first to April 30th in each year. As the watchman will likely begin duties only about the middle of the present month, a grant at the above rate will be allowed from the day he begins. The grant will be paid upon receipt of a voucher from you, in triplicate, properly certified, at the end of each quarter, for the amount due at the above rate. For your information, I enclose a copy of a voucher which it is desired you submit.

The Department is today placing an order with the Canadian Fairbanks-Morse Company, Limited, here, to supply, from their nearest branch office to the school, one (1) only D-P Watchman's Clock, complete, with ten stations, and one year's supply of record dials. This company has been requested to forward the clock, charges prepaid, to the Reverend Principal and to forward to you the account, in triplicate, covering the cost, with receipt for freight charges prepaid. When the clock is received, you should attach the account to proper voucher forms, certify in the usual manner and forward for payment.

It is expected that the school authorities will engage the services of a reliable night watchman. I shall be pleased if you will inform the Department of the name, qualifications, etc., of the man engaged and the date upon which he begins duties.

Your obedient servant,

Encl. *ABM*

Ottawa, December 7, 1932.

Gentlemen:

I have to request that you will supply, from your nearest branch office, for the use of the Sacred Heart Indian Residential School, Brocket, Alberta, one (1) only D-P Watchman's Clock, complete, with ten stations, and also one year's supply of record dials. The clock should be shipped, charges prepaid, addressed to:

Reverend J. L. Levern, O. M. I.,
Principal,
Sacred Heart Indian Residential School,
Brocket, Alta.

Your account, in triplicate, covering the cost, together with receipt for the shipping charges prepaid, should be forwarded to Mr. H. C. Lancaster, Indian Agent, Brocket, Alta. He is being informed of the order placed with you and requested, upon receipt of the clock, if in good condition, to certify the account and sent it to the Department for payment.

This clock should be supplied at a cost not to exceed the price charged for other clocks which have been ordered from your firm by this Department. Full instructions should be furnished.

Your obedient servant,

A. F. MacKenzie,
Secretary.

The Secretary,

Department of Indian Affairs
Ottawa.

Dear Sir,

With reference to our conversation of the 7th inst. in your office, I beg to thank you first for your kindness, which has touched me so much, and to offer you my best wishes for the New Year.

Now : I. Concerning our iceh house trouble, I spoke to you about an expert's plan to improve it ; but, after having considered the matter again, we have come to the conclusion that even with this costly improvement it is still doubtful that it will give satisfaction : a frigidaire is the only thing that will answer the purpose, whenever it will be possible to have it.

II. - With regard to the night watchman, I regret to say that I was not able to get him before yesterday; he is here at last, his name is " Brother L. Guillaume", a good and reliable man, 60 years old. The Clock which you have kindly sent us and for which I thank you has arrived and the ten Stations are hung and screwed in the different rooms of the house.

Now, although I am very glad to have a night watchman, I must say also that we are now without any room at all for the visitors and even without a parlor : the parlor is the only place where we can put him. When this School was in construction I made a remark about the insufficient accommodation for the staff and suggested to put a partition in the large parlor in order to have one more room. This was refused, but now I beg to repeat it : this parlor is 19 feet by 12½, and therefore after being divided it will still be large enough. A good carpenter from Pincher-Creek (Mr. Ouellette) is willing to do this work at once for about \$65.00.

Consequently, I beg to ask the Department to allow an immediate grant for that purpose.

Expecting a satisfactory answer and thanking you in anticipation, I remain, dear Sir,

Your obedient servant,

J. L. Lacombe, omi
Principal.

Ottawa, January 7, 1933.

Reverend Sir:

I have your letter of the 31st ultimo, informing the Department of the name of the man whom you have engaged to perform the services of night watchman at the Sacred Heart Indian Residential School.

With reference to accommodation for the night watchman, I have to say that the Department will approve of you incurring an expenditure not exceeding the sum of approximately \$65 in having a partition erected to divide the parlour, in order to provide a room for him. The above amount is to include the cost of material and labour. After the work has been completed to your satisfaction, you should prepare an itemized account, in triplicate, showing the various quantities of material used, the number of days or hours of labour employed and the rate paid. This account, you should hand to Mr. H. C. Lancaster, Indian Agent, who is being informed of the authority granted you to incur the above expenditure. It is hoped that, with the services of the night watchman, any chance of fire hazard will be eliminated.

The Department has noted the need of a frigidaire, but, in this connection, I have to say that it is very doubtful if funds for the purpose can be provided in the Estimates for the next fiscal year.

Your obedient servant,

A. F. MacKenzie

Sacred Heart School, Brocket, Alta, July 8, 1933

Mr. Webb,

Acting Agent, Brocket.

Dear Sir,

Just a few lines about our kitchen Range : if you remember it, I spoke to you already about this matter last may, and having been told that Doctor McGill was coming, we decided to wait for him.

Unfortunately, he did not visit our school, and therefore I beg to tell you again that we absolutely need a new range as soon as possible: it was in 1915 that we received the one we are using; it was a very good one, a Gurney-Oxford, 7 $\frac{1}{2}$ feet long, but in spite of the good care of the cook, it has been giving very poor satisfaction for the last two years.

I sincerely regret to cause such a heavy expense to the Department, but I cannot help it. Consequently, I will ask you to refer this matter to the Department as soon as you can.

Thanking you in anticipation and begging pardon for all the trouble, I remain, dear Sir,

Yours sincerely,

J. L. Laverne, omc.
Principal

Sir:

I have your letter of the 10th instant, enclosing a communication which you received from the Principal of the Sacred Heart Indian Residential School, requesting that a new kitchen range be supplied.

In reply I have to say that the Department has no funds to provide the expenditure required in supplying a new range. Our Appropriation this year was considerably reduced and there has recently been a request for a further reduction. I would suggest, however, that a further application be made at the end of September, next, at which time we will be aware of the amount available for the supplying of equipment to residential schools.

The Secretary,

Department of Indian Affairs, Ottawa.

Dear Sir,

The winter is coming and therefore I am worrying again about the life of our pupils. Last winter, you kindly allowed me to hire a night watchman at \$40.00 a month, and this was indeed a great relief for me. I wish to know if you are willing to do the same this year.

Hoping for a prompt and satisfactory answer and thanking you in anticipation, I remain, dear Sir,

Your faithful servant,

J. L. Levern, O.M.I.

Principal.

Ottawa, October 14, 1933.

Sir:

The Department is in receipt of a letter from Rev. J. L. Levern, O.M.I., Principal of the Sacred Heart Indian Residential School, requesting a renewal of the grant towards the salary of a night-watchman.

Please inform Rev. Father Levern that the Department will allow grant at the rate of \$40 a month towards the salary of a night watchman at the Sacred Heart School for the period November 1st to March 31st, 1934. This grant will be paid upon receipt from you of the usual voucher, in triplicate, properly certified, at the end of each quarter. The vouchers should be prepared in a similar manner to the voucher forwarded with official letter of December 7, 1932.

The Department is not replying to Father Levern's letter, but you should inform him at once regarding the employment of a night watchman.

Your obedient servant,

A. F. MacKenzie,
Secretary.

qu'il fournit à présent est nulle et qu'une intervention immédiate du Département s'impose.

Je sais qu'on a reproché au Rév. Père Principi, le P. Levesque, de garder un troupeau trop nombreux. C'est la première fois, à ma connaissance, qu'on se plaint d'un Principal qui veuille le succès complet de sa ferme et tient à posséder un troupeau qui dispense l'Ecole d'avoir à se procurer ailleurs la viande nécessaire à l'alimentation. Nous avons fait de grands sacrifices pour monter ce troupeau, où il y a sans doute beaucoup à améliorer encore; mais il nous a semblé, en ce faisant, répondre aux désirs maintes fois exprimés du Département, et fournir en même temps à l'Ecole les moyens de se suffire à elle-même. Nous ne croyons pas que le nombre d'animaux soit exagéré, et nous regretterions beaucoup que le Département, en refusant de procurer à l'Ecole l'eau et le pâturage qui conviennent, lui enlève ainsi une partie des ressources qui lui permettraient de donner entière satisfaction.

Veillez croire, cher M. Sutherland, à ma plus haute considération et agréer mes meilleurs vœux de santé, de bonheur et de succès pour l'Année Nouvelle,

E. Langlois c.m.s.

Translation

Brocket, Alta. Dec. 21st 1933.

Mr. Sutherland

Superintendent of Indian Education.

Dear Mr. Sutherland

I am at the present moment at the Sacred Heart School of the Peigans, on the Brocket reserve. The school functions very well everything seems to be prosperous, and I believe the Department has reasons to be glad of the work of the staff and of the good result which has crowned their efforts.

There is however a very serious matter on which I wish to draw your attention: it is that of the water supply. They suffer much here from the lack of water, for the first necessities of the school itself as well as for the needs of the stable.

Since 1928, numerous complaints were addressed to the Department about this question. The water supply has never been sufficient: at a certain moment of the year, the school was practically without water. The well gives hardly any water and the source itself is almost dry; water comes out of it only intermittently and in small quantity. You can imagine the inconvenience and the dangers of all kinds that might happen for an institution of that importance.

On account of lack of water, it is impossible to give the children their weekly bath and that since September; for the same want of water the sewer pipes get continually clogged and sometimes we can not use the W.C. Yet I can assure you that everyone tries to economise the water as much as possible. There is just enough on certain days to supply the kitchen, and prevent the cattle from suffering from thirst.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Do you not believe that this state of affairs should not be tolerated any longer. We are running great risks and in spite of all precautions taken by the staff, very little ^{would} under such conditions ^{cause} irreparable misfortune might. I consequently take the liberty of insisting with you and the Superintendent General, Mr. McGill so that efficacious remedy be brought immediately to the situation. The real remedy would be the digging of a good well. This part of the country is too much exposed to dryness to depend on surface water which form here and there small sources during the rainy years and in the Spring. It was one of these sources the we tried to use in 1932, by expensive work, to which Mr. G. Smith was opposed because he only had confidence in a good well which would have pumped the necessary water from a reasonable depth. It might be sufficient to clean the present well and to dig it further down, if this is possible. What is certain is that the quantity of water it supplies now is null and that steps must be taken by the Department immediately.

I know that reproaches were made to Rev. Principal Father P. Lavern, of keeping a too numerous herd. It is the first time to my knowledge, that I hear complaints against a Principal who wishes the complete success of his farm and wants to possess a herd that would dispense the school from procuring its necessary meat outside. We made great sacrifices to bring up that herd, which evidently needs much improvement - yet, but it seemed to us by doing so, that we were fulfilling the wishes often expressed by the Department, and give at the same time a chance to the school to supply itself. We do not believe that the number of cattle is exaggerated, and we would regret very much to see the Department, by refusing to give the school

the convenient water and grazing land, remove
from it a good portion of its resources which would
permit it to give full satisfaction.

Kindly believe, dear Mr. Lutherland, in the
expression of my high consideration and accept
my best wishes of health, happiness and suc-
cess for the New Year

(sgd) W. Langlois.

O. M. V.

116-2-5.

Ottawa, January 2, 1934.

Dear Father Langlois:

I have your letter of the 21st ultimo, with reference to the present condition of the water supply at the Sacred Heart Indian Residential School, on the Peigan reserve. I was rather surprised to learn of the lack of water at this school, as, some two years ago, the Department expended the sum of approximately \$3,000 in the installation of an auxiliary water supply system - the work being carried out by the Dominion Water Power and Hydrometric Bureau in Calgary. This supply, as you are aware, was obtained from a spring and piped to the school. It was stated, at that time, that it could supply 6,000 gallons per day, which amount was ample for all purposes and for providing a reserve supply for fire or other emergencies.

I may add that your letter is the first information received regarding the present condition of the water supply. No doubt, this is due, to a very great extent, to the very limited rainfall during the past summer. It is possible that a good supply of water could be obtained from the former deep well, if it were placed in good condition. This well was examined at the time the work of installing the pipeline from the spring was performed, and the authorities of the Dominion Water Power Branch stated, at that time, that this well appeared to have almost entirely failed.

However, I may add that the Department is taking up with Mr. Inspector Christianson the matter of the water supply. He is being requested to submit a report with reference to drilling a new well and an estimate of the cost. I may state, further, that as the Department had no recent intimation regarding the inadequacy of the water supply at this school, no provision has been made in the Estimates for funds to carry out any work in drilling a new well or for other means of obtaining a supply of water.

When a report is received from the Inspector, consideration will be given as to what work can be carried out to augment the present water service at this school.

Your obedient servant,

J. D. Sutherland
J. D. Sutherland,
Acting Supt. of Indian Education.

EX. 1.

Ottawa, January 2, 1934.

Sir:

A communication has been received from Very Rev. Father Langlois, O.M.I., Provincial of the Oblate Order, in Edmonton, with reference to the condition of the water supply at the Sacred Heart Indian Residential School, on the Peigan reserve. He states that the school is suffering much from lack of water, both for school purposes and for the stock.

As you are, no doubt, aware, in the summer of 1932, the Department incurred considerable expense in installing a water supply system at this school - which work was carried out by the Dominion Water Power Branch. It consisted of the constructing of a concrete collecting tank at a spring and piping a distance of 950 feet to the school. It also included connections with the existing pressure system from a well.

No doubt, the present condition is due to a great extent to the small quantity of rainfall during the past summer, and it may be that, under more favourable conditions, an ample supply of water could be obtained from the spring.

Father Langlois, in consultation with the Principal, recommends that either the present old well be dug out and deepened or that a new well be drilled.

I would request that you investigate the water conditions at this school and submit a report. Please make a recommendation concerning what should be done to improve the water system, giving an estimate of the cost. It might be advisable for you to consult the local representative of the Dominion Water Power Branch in Calgary. Father Langlois is being informed that the question of the water supply at the Sacred Heart School is being referred to you for a report. I may add that, as no complaint regarding the water supply at this school has been received since the work mentioned above was carried out in the summer of 1932, no funds have been provided in the Estimates for the coming fiscal year to cover any expenditure in improving the system.

Your obedient servant,

A. F. MacKenzie

INSPECTOR'S OFFICE,

PB CALGARY, ALTA., January 9th, 1934.

IN YOUR REPLY REFER TO

No. 406-11A.R.C.

ALSO TO DATE OF THIS LETTER

Sir:

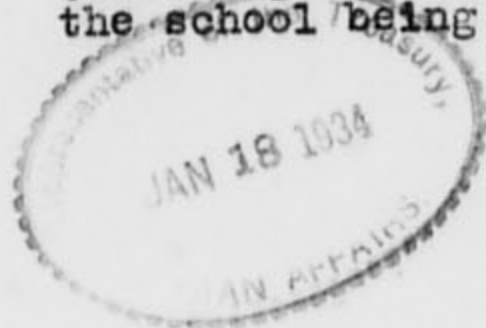

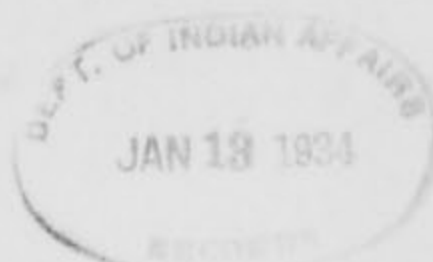

I beg to acknowledge receipt of Department's letter No. 116-2-5 of the 2nd instant in connection with the water situation at the Sacred Heart Indian Residential School on the Peigan Reserve. I have just been over to see Mr. Hoover, of the Dominion Water Power Branch here, and have made arrangements with him to have Mr. Fetterly accompany me down to Brocket to look into this situation as soon as possible. At the present time Mr. Fetterly is at the Delmas Indian School west of Battleford, and on his return he will get in touch with me immediately. Of course we will have to depend on fine weather to go down there so it may be some time before I am able to furnish the department with a full report. I trust this will be satisfactory.

In the meantime I would think that the school has sufficient water as this winter there has been a lot of snow in the southern part of the province and several chinooks which has melted the snow. Of course when you take into consideration that the school has approximately 100 head of live stock and that that number of cattle require a great deal of water, there is some possibility of the school being short of water.

Your obedient servant,

M. Christianson,
Inspector of Indian Agencies,
Alberta Inspectorate.

Sacred Heart Indian School, Alta. January, 8th. 1934.

H. C. Lancaster.
Indian Agent, Brocket.

Dear Sir,

You remember that two weeks ago I spoke to you about the alert we got here at the school one morning at a quarter past five : a few minutes after the engine had been started, the Sister in charge of the girls remarked in the dormitory some sparks around the 4" sewer Ventilator, just under the ceiling. She ran down at once to the chapel to tell me about it; I went up and I saw sparks indeed between that pipe and the metal ceiling, while we were hearing a sonorous noise on the roof. I gave order to stop the engine immediately, and then the sparks ceased very soon, and the fierce wind went down at about the same time: our trouble was all over. As soon as the daylight came, we examined all the wire connexions between the ceiling and the roof, but we could find nothing wrong.

We were still wondering what might have caused those sparks, when on Christmas day Mrs Bad Eagle asked me what was the meaning of the very big light which she saw from her house, one morning, on top of the roof of the School: Before I could answer, Mrs Mike One Owl and her mother, who were sitting near her, exclaimed at once: "Oh! Yes, we have seen that big light also from Nathan Many Feathers' house." This has given us the explanation of the big noise we heard while we were looking at the sparks : we thought it was due to the fierce wind blowing on the west fire escape or the revolving ventilator on top of the dormitory; but, in fact, it was caused by the flame rushing out of the sewer ventilator.

But this has not explained the cause of the accident: Is there any place under the roof where the insulation cover of the electric wires has been rubbed off under the pressure of the wind shaking the building, establishing thus a short circuit? we hardly think so; or was it just the gas exploding from the sewer? This is what some experts claim, and they suggest that two high ventilators should be put on the sewer pipe line in order to let the gas escape, and to prevent the repetition of the same accident. When this happened there was six inches of snow on the roof, otherwise the whole building would have been burnt. Such is the reason why I have considered it my duty to write you, so that you may submit the matter to the Department.

Yours truly,

OFFICE OF
INDIAN AGENT

Peigan Indian Agency, Brocket., Alberta.

January, 18th. 1934.

Sir,

Rev. J. L. Levern, principal of the Sacred Heart Indian Residential School (R/C) Brocket, reports the Lister light plant engine is in need of a general overhauling, and I would ask authority to have ~~***~~ a representative from the company in Calgary, make an inspection and estimate of the cost.

This was the course adopted in connection with the Lister engine at the St. Cyprian's School recently. Should authority not be granted for the the overhaul to be done, the expert would necessarily have to be paid for his time.

I also enclose copy of a letter received from Rev. J. L. Levern recently.

I have the honour to be

Sir,

Your obedient servant,

H. C. Lancaster

Dear Sir,-

Replying to your letter of the 18th with reference to the lighting plant at the Sacred Heart Indian Residential School, I beg to say that the department approves of having a competent representative of the Lister Company examine the plant and submit a report with estimate of cost as to what is required to put same in good working condition.

Yours very truly,

A. F. MacKenzie.

M. J. D. Sutherland,
Département des Affaires Indiennes,
Ottawa, Ont.

Cher M. Sutherland,

Lors de la réception de votre bonne lettre du 2 janvier dernier au sujet de l'approvisionnement d'eau insuffisant à l'Ecole Indienne du Sacré-Coeur de Brocket, Alta., je n'étais pas en mesure de vous donner de plus amples renseignements. C'est pour quoi j'ai dû attendre jusqu'à ce jour pour accuser réception de votre communication.

Vous voudrez bien lire les deux lettres ci-jointes qui vous diront que si le Département n'avait pas mis au courant de la situation, ce n'était pas de la faute du R. P. Principal. A ce propos, permettez-moi d'ajouter que ce qui vient de se passer à Brocket n'est pas un cas unique dans l'histoire de nos relations avec les Agents du Département sur les réserves. Ils ont peut-être trop d'autorité en mains, et de ce fait trop d'influence sur les Indiens, pour ne pas être parfois tentés d'en abuser et de s'en servir dans un esprit de favoritisme peu compatible avec leur charge.

Vous verrez d'après la lettre du R. P. Levern, qu'actuellement, depuis quelques jours, le puits fournit une bonne provision d'eau; il en est ainsi, chaque année, à partir du milieu de l'hiver jusqu'au milieu de l'été environ. Ensuite il s'assèche presque complètement. Ceci portait le R. P. Principal à croire que si le puits pouvait être nettoyé comme il faut et remis en excellent état, nous n'aurions plus, cher M. Sutherland, à vous ennuyer avec cette question.

Vous remarquerez aussi qu'en désespoir de cause le P. Levern a tenté lui-même de creuser un puits. Je n'ai pas approuvé cette manière de faire; mais je comprends qu'on en vienne à des déterminations comme celle-là, lorsque, pendant des mois, on est menacé d'une disette d'eau extrêmement dangereuse. C'est ainsi que vers la mi-janvier de cette année le feu a pris

Translation

Brocket, Alta. Jan 28th 1934
 Rev. F. U. Langlois, Prov. C.M.I.
 Edmonton.

Rev. and dear Provincial Father

I received your good letter of the 11th together with a copy of the reply from Ottawa, dated the 2nd inst., and I thank you very heartily.

Now I wish to bring out two sentences of that letter: "I was rather surprised to learn of the lack of water at this school"..... "I may add that your letter is the first information received regarding the present condition of the water supply....." There is a mystery in this for me; judge it by yourself, after you read my letter of the 23rd of August to Mr. Lancaster, of which you will find a copy attached herewith.

About two weeks after I gave this letter to Mr. Lancaster, I received from him this verbal answer: "The Department replied that we can not do anything for your cattle; you have too many of them, sell some of them and pay Nap. Provost yourself." - Verbal answer, such as it has become a habit at the office at Brocket for a long time, when it concerns correspondence with Ottawa.

However, if Mr. Lancaster has really brought my letter to the attention of the Department (letter of the 23rd of August), the surprise mentioned above comes from a simple omission, and it would not be true that "your letter is the first information received regarding the condition of the water supply." I prefer not to make any other comments.

Mr. Christianson came with Mr. Fetterly, Engineer of Calgary, during my trip to Edmonton. As I told you the well has come to life again, as it happens every winter for two or three months.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
 ARCHIVES PUBLIQUES

This is not consequently one reason to tell us that we have water in abundance, because our long experience is there to warn us that we must be ready to melt snow again, if there is any, not only for the cattle, but also for the need of the school. You have seen yourself, when you came to visit us in December, that judging the situation desperate, after being turned down by Mr. Lancaster, and in presence of our lack of water, I was forced to rent a machine for digging wells; we made two attempts, these were unsuccessful so far, and expensive and painful to accomplish; but in justice, should not the Department refund at least this expenditure?

This is all for the present. We are all well.

Your humble brother in O.S. and M.S.

Mr. J. M. Sutherland
Dept. of Indian Affairs
Ottawa, Ont.

Dear Mr. Sutherland

At the time I received your good letter of the 2nd of January last concerning the insufficiency of the water supply at the Indian school of the Sacred Heart at Brocket, Alta., I was not in a position to give you any further information. That is why I had to wait until now to acknowledge the receipt of your communication.

You will kindly read the two letters enclosed herewith, which will tell you that if the Department was not informed of the situation, it was not the fault of the Rev. Father Principal. About this matter, permit me to add that what has just happened at Brocket is not a unique incident in the history of our relations with the Agents of the Department on reserves. They have perhaps too much authority on hand, and on that account too much influence on the Indians, and are evidently tempted at times to abuse of it and make use of it in a spirit of favoritism which is not compatible with their functions.

2415
Return
after Jan. 20/34

You will see by the letter of Rev. Father Severn, that for a few days past, the well has been supplying a good provision of water; It is the same every year, from the middle of Winter to the middle of Summer or about. Then it dries up completely. This brought Rev. Father Principal to believe that if the well could be cleaned thoroughly and put in good order, we would not have, my dear Mr. Sutherland, to annoy you with this question.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2

You will notice also that finding his case desperate
Rev. F. Levern tried himself to dig a well. I did not
approve this move; but I understand that one can
come to such determination as that, when for months
they are menaced by a scarcity of water extreme-
ly dangerous. It is so that about the middle of
January this year fire started in the sewer, on
account of the accumulation of gas which is not
regularly washed away. We were afraid at
a certain moment that the whole school would burn.

I hope that this question will finally be settled
to the best advantage of the interested persons, and
in the meantime, I pray you to believe in my
best sentiments.

Ottawa, February 8, 1934.

Dear Father Langlois:

I have your letter of the 3rd instant, with further reference to the water supply at the Sacred Heart Indian Residential School, on the Peigan reserve, and enclosing a communication which you received from the Rev. Principal, regarding the matter.

Upon receipt of your former letter, dated December 21st, last, the Department requested Mr. Inspector Christianson to investigate the water conditions at this school and submit a report. He was to consult the representative of the Dominion Water Power Branch in Calgary. Mr. Christianson has replied stating he has arranged that Mr. Fetterly, of the Water Power Branch, would accompany him to Brocket to look into the situation as soon as weather conditions permit. Mr. Christianson stated that it would depend on the weather when they would visit the school and examine into conditions.

It is hoped, in the meantime, that the school will have sufficient water, as this winter there has been a great deal of snow and several Chinooks in the southern part of the province, which have melted the snow. Of course, when you take into consideration that the school has approximately 100

Report
on
Condition of Water Supply
at
Sacred Heart (R.C.) Indian School,
Brockton, Alberta,

by
P.A. Fetterly,
Asst. Hydraulic Engineer.

1. Purpose of Report

Instructions were received by Mr. M. Christianson, Inspector of Indian Agencies, from the Department of Indian Affairs, to proceed to Sacred Heart Indian School, Brockton, Alberta, to ascertain the reason for complaints received from Father Lavern to the effect that the water supply at the school was inadequate.

He was also instructed to request a representative of the Dominion Water Power Bureau to accompany him. It stated that the sum of \$2750, or thereabouts had been expended in 1932 for an improved water supply and, in view of this, to obtain all available data on the matter.

The writer, who was responsible for the design and construction of the works in connection with the

2.

development and consequent augmentation of the water supply accompanied Mr. Christianson on an inspection trip on January 23 and 24.

2. Review of Past Activities

The preliminary report was made on May 26, 1931. This report describes in detail conditions as they existed at that time.

(a) School Requirements

The requirements of the school were 3050 gallons per day, with an available supply from the original well of 550 gallons, together with 400 gallons from the undeveloped spring. This latter supply flowed from the spring to a dammed pond, a great deal of water being lost by seepage and evaporation, and more through pollution by livestock.

(b) The Original Well

The original well was drilled under the engine room to a depth of 300 feet, Mr. Gardner-Smith being in charge for the Department of Indian Affairs. It then yielded an adequate supply for all purposes and continued to do so for a time. It at last began to fail but the reason could not be ascertained although various attempts were made.

Certain men connected with the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

school who were present when the well was drilled claimed (on January 23) that the well became crooked at 250 feet because the strata of stone were at an angle and that the driller withdrew his tools at 300 feet. The driller, Ben Sill, of Macleod, Alberta, who was interviewed on the same date, stated definitely that the well was straight to the bottom. Mr. Gardner-Smith has lately corroborated this statement.

However, for some reason which has not been definitely ascertained, the production lessened to 550 gallons per day. The yield of the well has been fluctuating from that amount upwards since that time. In the dry season, say from May to October, the yield is at a minimum. It then gradually increases during the winter.

In the semi-arid regions the general efficiency of wells is very difficult, in fact almost impossible to foretell. There may be surface springs of small or average flow in the vicinity, but this is no criterion of conditions 300 or 400 feet down.

(c) Driller Sill's Statement

Mr. Sill, who was out of the country

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4.

when the original report was made in 1931, and so could not be interviewed, stated on January 23, 1934, that he went through hard sand and clay to 133 feet. He obtained some water at 80 feet but not enough. This volume increased as he went down. The hardness of the sand structure also increased. He stopped drilling in hard sand at 300 feet with an adequate supply of water. He then cased the well with 5-5/8" casing to 133 feet and with 5" casing to 300 feet. The last 20 feet of casing was well perforated with holes. He claims the well was not crooked, and that it was a good well. He plugged the well as the pump was not lowered for some time after he finished drilling. Insidentally this matter of waiting to put in the pump for some time after the hole is finished is objected to by some drillers as the well has a chance to fill up with sand, e.g. Blue Quills School well trouble.

Mr. Sill states now that if he were drilling another well he would drill deeper.

Summing up, the probable trouble is caused by a seasonal fluctuating supply in the underground reservoir. The water may not seep sufficiently fast into the well to produce an adequate supply. Or the holes may

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

5.

plug up with sand. Conditions may be caused by one or more of several reasons which are almost impossible to ascertain in a well 300 feet deep.

(d) The Spring.

The spring produced 12 to 1600 gallons per day in 1926, when the school was constructed. In 1931 it produced 400 gallons per day, as measured by the writer.

It was determined, in a final report before construction, dated September 11, 1932, after considering three alternatives, i.e., drilling a new well near the old one, drilling a new well on the plateau 3000 feet south of the school, or developing the spring; to carry out the latter plan. This plan was the one suggested by Mr. Christianson before the writer mentioned it and without his (the writer's) knowledge until January 23. It was, and still is, considered the best plan, the success of a new well near the site of the old one being problematical, and a well on the hill being considered entirely too expensive because of the trenching, together with the construction of a well house, engine and pump, etc., on the site which would be difficult of access. The spring would produce a sure supply of good water, even if it did fluctuate in volume.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

6.

However, the spring was excavated in order to intercept underground water and to act as a reservoir, a concrete tank and engine being installed. A trench was excavated to the School 900 feet to the west. The total cost was \$2750.

The point should be emphasized that no change in the opinion of Mr. Christianson or the writer has taken place as regards the best plan to use in 1932, viz: development of a sure and visible supply, i.e., the spring.

The first trial development increased the flow of the spring to 1700 gallons per day. It was therefore considered that the best plan was to develop the spring.

Father Lavern stated in a letter to this office, dated June 4, 1932, as follows:- "I am glad to say that the new water supply system at our school is giving perfect satisfaction. The plant is working very well". This was written several months before the supply began to fail, the spring of 1933.

3. Present Situation

The writer interviewed the school authorities on January 23, 1934. They stated that it was very unfortunate that the inspection was made at that date. They stated that if the school had been visited between May and December it would have been found that the supply was entirely inadequate. The cattle were all sent to the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

river bottom, 6 miles north of the school, for the summer. Even then the supply was inadequate.

It appears that the supply in the well and spring diminished substantially in May and only began to increase about January 1. Christmas day, and many other days, were occupied melting snow to provide a sufficient supply for the school.

Present Requirements

The approximate amount now required is as follows:

70 persons at 30 gallons	2100 gallons.
65 head of cattle at 12 gallons	780 "
14 horses at 12 gallons	168 "
8 pigs	<u>16</u> "
	3064 "

The total requirements are therefore about 3100 gallons, which is substantially the same as those of 1932.

Information Received from School Authorities and by

Observation.

In the spring of 1933, the water in both well and spring diminished, until Nov. 15, then began to rise. It rose late in December. The tank pressure sometimes rose to 15 lbs. but usually 10 lbs. Normal pressure being 40 lbs. for two tanks of 700 gallons each.

Before pumping for the cattle there was enough for the house. Last fall there was not sufficient for house alone. In the summer the well was very low most of

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

8.

the time. It furnished a little water but could not be depended upon.

As a rule the water was pumped from the spring for about one hour per day producing 500 or 600 gallons.

On January 23 the well was producing a fair amount.

The School Engineer stated that "4 tanks full" was sufficient for all purposes. This would amount to about the 3000 gallons estimated.

The School attempted last autumn to drill a well 200 feet east of the school, in the paddock, with a borrowed rig. They drilled 100 feet but found a dry hole. They then removed the rig to a small coulee about 2000 feet south of the School near the plateau and drilled 40 feet but were stopped by storm. This was done before Christmas. Water will evidently not be found in shallow wells in the vicinity of the School.

The school authorities state that the driller claimed at the time of drilling that the well produced 16 or 1700 gallons per day. This was corroborated by Mr. Gardner-Smith. Brotherson of Calgary, who tested the well about 1929 or 1930 claimed that it produced only 700 gallons per day. One can understand the difficulty of obtaining correct facts.

In an attempted test of conditions at the spring the writer on January 23, 1934, pumped upwards of 1000 gallons from the spring into the tanks. At the end

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

of three hours water was still coming freely. The school engineer stated that at first he pumped each day until the pump "sucked" but that now he pumps for a stated time only in order to obtain a reserve. Consequently, a supply has accumulated in the concrete tank at the spring which has a capacity of nearly 6000 gallons. This experiment was for the purpose of ascertaining the present probable production of the spring. This is very difficult to obtain but it is probably considerably in excess of the minimum of 400 gallons during the winter.

The total production of the well and spring during minimum flow in summer and autumn is therefore from 12 to 1400 gallons while the present flow - since Christmas - is from 2000 to 2500 gallons. This increased flow will last until April or May. It will then diminish to the minimum, as before.

4. Conclusions

- (a) Although ideas differ, the balance of opinion appears to favour locating wells in the open instead of under the main building.
- (b) The writer still believes that development of the spring provided the best remedy in 1932 for shortage of water.
- (c) A well on the plateau 2 or 3000 feet south of the school would have possibly provided a remedy as well drillers state that water is

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

10.

more often found on a hill than at the foot, although by no means invariably. They only say that there is a "better chance". In this case this would have been entirely too expensive. It would also have been very inconvenient because of the distance of the machinery from the house.

- (d) The present well does not provide sufficient water. This, together with the spring provides sufficient water during part of the year, but not sufficient during the dry season.
- (d) In this geographical situation water is very difficult to obtain under any circumstances, and every available source must be used. The engineer responsible for the supply, therefore, has to overcome a very difficult situation through no fault of his own, but because of physical conditions in a semi-arid area where no surface supply is available except for the spring.
- (f) As each individual source is deficient by itself, with no known means of improvement, use of both the present well and the spring should be continued, and the product of another source should be added to the supply.

5. Recommendation

Since conditions necessitate further

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11.

augmentation of the supply, there is no doubt of this fact, considering the necessities of the School itself, together with the large amount of stock to be supplied, entirely by artificial means - there is no other solution in the opinion of the writer, than to provide another supply. The two present sources of supply should be continued.

In view of this, one can see no other solution than to drill another well to a minimum depth of 300 feet, just outside the building and a few feet to the east or south, whichever is the most convenient.

The question of the new well being so near the old one was considered, and no reason could be adduced against locating the well five or six feet away regardless of the reason for the partial failure of the old one.

This new well should be sufficiently close to the present well so that a walking beam arrangement would connect the present pumping jack to the rods in the new well, for transfer of power from one well to the other when necessary.

If the well were located at a distance the cost of construction would increase greatly.

Facts learned by Mr. Sill in drilling the other well would be invaluable in drilling a new one. He drilled the old one with his own small rig. He now is an employee of T. Maughan of Lethbridge who has a large rig

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

at present lying unused 8 miles south of Pincher Creek and about 25 miles from the School. It was recently used in cleaning the well at school on the Blood Reserve. Incidentally, Mr. Sill charges \$100 for renovating an old well and \$1.50 per foot for drilling a new one.

One question which cannot be definitely answered is "What is wrong with the old well?" The supply may fluctuate or the well may be inefficient. If the former then augmentation is necessary. If the latter than a new well is a necessity. It is also suggested that a last examination be made of the old well at a cost of \$100 before starting the new one while the drilling rig is at the school.

6. Estimates.

The cost of a new well is as follows:-

Drilling 300 feet @ \$1.50	\$450.00
Casing 300 feet @ \$1.11	333.00
Piping P. & R. 300 feet @ 74.54	223.62
Working Barrel 2-3/4"	23.50
Octagonal Rods 1-3/8" 300' @ 41¢	123.00
Walking Beam. Connections.	75.00
Pipe Connections.	20.00
Alterations in walls of present building	30.00
Examination of old well.	<u>100.00</u>
Total.	1378.12

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Addendum re Walking Beam

Since the above was written the general design of the means of transferring power from the pump jack, which is being left in its present position over the old well, to the new well has been the object of further study.

In the first place, the writer does not know any duplicate of this idea of pumping from two wells by means of one jack and thus needs to proceed carefully. No detailed plans are being drafted as it would appear to be the work of a more experienced mechanical expert to design contact points of rods and walking beam, also the pivot in the wall. A 5" I beam should carry the necessary weight of approximately 1300 pounds, (doubled because of sudden strain?) and requiring between one and two horse power.

Secondly, the walking beam might work more efficiently if it were sufficiently long so that the inner end were directly over the centre of the old well so it could be connected to the centre plunger of the jack. If the new well were placed at an equal distance outside the well the total length of beam would be about 6½ feet. This would eliminate unequal strain on the shaft as would be the case if the rod were joined to the large cog wheel of the jack next the wall.

The upright rod, of course would move

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

14.

through a small arc, with a displacement of possibly 1/2" from the vertical. This might be the cause of difficulty in designing.

Thirdly, there appears to be no reason for doubting the possibility of activating both pumps simultaneously. In this way the weight of columns of water, etc., would be partially equalized and the delivery of water increased. The apparatus, of course, should be designed so that each could work independently.

Lastly, instead of using the walking beam the possibility of lengthening the overhead shaft to a point, say 3 feet outside of the building, has been considered. The concrete basement wall would then be cut through and an extra alcove made directly south of the pump jack. The building itself would need to be extended to cover the shaft. The present pulley shaft near the roof, however, is not very strong and might not stand the extra strain.

DOMINION WATER POWER AND HYDROMETRIC BUREAU

Your file 116-2-5.

OTTAWA, ONT., Feb. 19, 1934.

Sir,

Enclosed herewith is a report dated the 6th instant
by Mr. P.A. Fetterly of our Calgary staff dealing with the pre-
sent condition of the water supply system at the Sacred Heart
Indian school near Brocket, Alberta.

This report was prepared at the request of Mr.
Christianson, Inspector of Indian Agencies.

The report shows that there has been a serious
falling off in the water supply available for the school due
to partial failure of the deep well and of the spring which
was cleaned out and enlarged in 1932.

It is recommended that the existing deep well be
examined by a competent driller to find out if sand or other
obstructions are preventing a full flow of water, and if the
former flow cannot be obtained, to drill a new well 300 feet
deep near the present one as shown on the plan attached to the
report. The cost of examining the present well is estimated at
\$100 and of drilling a new well at \$1278.

Your obedient servant,

J.T. Johnston,
Director.

Calgary, Alta., Feb. 6, 1934.

Report
on
Condition of Water Supply
at
Sacred Heart (R.C.) Indian School,
Brocket, Alberta.

by
P.A. Fetterly,
Asst. Hydraulic Engineer.

1. Purpose of Report

Instructions were received by Mr. M. Christianson, Inspector of Indian Agencies, from the Department of Indian Affairs, to proceed to Sacred Heart Indian School, Brocket, Alberta, to ascertain the reason for complaints received from Father Lavern to the effect that the water supply at the school was inadequate.

He was also instructed to request a representative of the Dominion Water Power Bureau to accompany him. It stated that the sum of \$2750, or thereabouts had been expended in 1932 for an improved water supply and, in view of this, to obtain all available data on the matter.

The writer, who was responsible for the design and construction of the works in connection with the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

development and consequent augmentation of the water supply accompanied Mr. Christianson on an inspection trip on January 23 and 24.

2. Review of Past Activities

The preliminary report was made on May 26, 1931. This report describes in detail conditions as they existed at that time.

(a) School Requirements

The requirements of the school were 3050 gallons per day, with an available supply from the original well of 550 gallons, together with 400 gallons from the undeveloped spring. This latter supply flowed from the spring to a dammed pond, a great deal of water being lost by seepage and evaporation, and more through pollution by livestock.

(b) The Original Well

The original well was drilled under the engine room to a depth of 300 feet Mr. Gardner-Smith being in charge for the Department of Indian Affairs. It then yielded an adequate supply for all purposes and continued to do so for a time. It at last began to fail but the reason could not be ascertained although various attempts were made.

X Certain men connected with the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

school who were present when the well was drilled claimed (on January 23) that the well became crooked at 250 feet because the strata of stone were at an angle and that the driller withdrew his tools at 300 feet. The driller, Ben Sill, of Macleod, Alberta, who was interviewed on the same date, stated definitely that the well was straight to the bottom. Mr. Gardner-Smith has lately corroborated this statement.

However, for some reason which has not been definitely ascertained, the production lessened to 550 gallons per day. The yield of the well has been fluctuating from that amount upwards since that time. In the dry season, say from May to October, the yield is at a minimum. It then gradually increases during the winter.

In the semi-arid regions the general efficiency of wells is very difficult, in fact almost impossible to foretell. There may be surface springs of small or average flow in the vicinity, but this is no criterion of conditions 300 or 400 feet down.

(c) Driller Sill's Statement

Mr. Sill, who was out of the country

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4.

when the original report was made in 1931, and so could not be interviewed, stated on January 23, 1934, that he went through hard sand and clay to 133 feet. He obtained some water at 80 feet but not enough. This volume increased as he went down. The hardness of the sand structure also increased. He stopped drilling in hard sand at 300 feet with an adequate supply of water. He then cased the well with 5-5/8" casing to 133 feet and with 5" casing to 300 feet. The last 20 feet of casing was well perforated with holes. He claims the well was not crooked, and that it was a good well. He plugged the well as the pump was not lowered for some time after he finished drilling. Incidentally this matter of waiting to put in the pump for some time after the hole is finished is objected to by some drillers as the well has a chance to fill up with sand, e.g. Blue Quills School well trouble.

Mr. Sill states now that if he were drilling another well he would drill deeper.

Summing up, the probable trouble is caused by a seasonal fluctuating supply in the underground reservoir. The water may not seep sufficiently fast into the well to produce an adequate supply. Or the holes may

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

5.

plug up with sand. Conditions may be caused by one or more of several reasons which are almost impossible to ascertain in a well 300 feet deep.

(d) The Spring.

The spring produced 12 to 1600 gallons per day in 1926, when the school was constructed. In 1931 it produced 400 gallons per day, as measured by the writer.

It was determined, in a final report before construction, dated September 11, 1932, after considering three alternatives, i.e., drilling a new well near the old one, drilling a new well on the plateau 3000 feet south of the school, or developing the spring; to carry out the latter plan. This plan was the one suggested by Mr. Christianson before the writer mentioned it and without his (the writer's) knowledge until January 23. It was, and still is, considered the best plan, the success of a new well near the site of the old one being problematical, and a well on the hill being considered entirely too expensive because of the trenching, together with the construction of a well house, engine and pump, etc., on the site which would be difficult of access. The spring would produce a sure supply of good water, even if it did fluctuate in volume.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

6.

However, the spring was excavated in order to intercept underground water and to act as a reservoir, a concrete tank and engine being installed. A trench was excavated to the School 900 feet to the west. The total cost was \$2750.

The point should be emphasized that no change in the opinion of Mr. Christianson or the writer has taken place as regards the best plan to use in 1932, viz: development of a sure and visible supply, i.e., the spring.

The first trial development increased the flow of the spring to 1700 gallons per day. It was therefore considered that the best plan was to develop the spring.

Father Lavern stated in a letter to this office, dated June 4, 1932, as follows:- "I am glad to say that the new water supply system at our school is giving perfect satisfaction. The plant is working very well". This was written several months before the supply began to fail, the spring of 1933.

3. Present Situation

The writer interviewed the school authorities on January 23, 1934. They stated that it was very unfortunate that the inspection was made at that date. They stated that if the school had been visited between May and December it would have been found that the supply was entirely inadequate. The cattle were all sent to the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

river bottom, 6 miles north of the school, for the summer. Even then the supply was inadequate.

It appears that the supply in the well and spring diminished substantially in May and only began to increase about January 1. Christmas day, and many other days, were occupied melting snow to provide a sufficient supply for the school.

Present Requirements

The approximate amount now required is as follows:

70 persons at 30 gallons	2100 gallons.
65 head of cattle at 12 gallons	780 "
14 horses at 12 gallons	168 "
8 pigs	16 "
	3064 "

The total requirements are therefore about 3100 gallons, which is substantially the same as those of 1932.

Information Received from School Authorities and by

Observation.

In the spring of 1933, the water in both well and spring diminished, until Nov. 15, then began to rise. It rose late in December. The tank pressure sometimes rose to 15 lbs. but usually 10 lbs. Normal pressure being 40 lbs. for two tanks of 700 gallons each.

Before pumping for the cattle there was enough for the house. Last fall there was not sufficient for house alone. In the summer the well was very low most of

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

8.

the time. It furnished a little water but could not be depended upon.

As a rule the water was pumped from the spring for about one hour per day producing 500 or 600 gallons.

On January 23 the well was producing a fair amount.

The School Engineer stated that "4 tanks full" was sufficient for all purposes. This would amount to about the 3000 gallons estimated.

The School attempted last autumn to drill a well 200 feet east of the school, in the paddock, with a borrowed rig. They drilled 100 feet but found a dry hole. They then removed the rig to a small coulee about 2000 feet south of the School near the plateau and drilled 40 feet but were stopped by storm. This was done before Christmas. Water will evidently not be found in shallow wells in the vicinity of the School.

The school authorities state that the driller claimed at the time of drilling that the well produced 16 or 1700 gallons per day. This was corroborated by Mr. Gardner-Smith. Brotherson of Calgary, who tested the well about 1929 or 1930 claimed that it produced only 700 gallons per day. One can understand the difficulty of obtaining correct facts.

In an attempted test of conditions at the spring the writer on January 23, 1934, pumped upwards of 1000 gallons from the spring into the tanks. At the end

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

of three hours water was still coming freely. The school engineer stated that at first he pumped each day until the pump "sucked" but that now he pumps for a stated time only in order to obtain a reserve. Consequently, a supply has accumulated in the concrete tank at the spring which has a capacity of nearly 6000 gallons. This experiment was for the purpose of ascertaining the present probable production of the spring. This is very difficult to obtain but it is probably considerably in excess of the minimum of 400 gallons during the winter.

The total production of the well and spring during minimum flow in summer and autumn is therefore from 12 to 1400 gallons while the present flow - since Christmas - is from 2000 to 2500 gallons. This increased flow will last until April or May. It will then diminish to the minimum, as before.

4. Conclusions

- (a) Although ideas differ, the balance of opinion appears to favour locating wells in the open instead of under the main building.
- (b) The writer still believes that development of the spring provided the best remedy in 1932 for shortage of water.
- (c) A well on the plateau 2 or 3000 feet south of the school would have possibly provided a remedy as well drillers state that water is

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

10.

more often found on a hill than at the foot, although by no means invariably. They only say that there is a "better chance". In this case this would have been entirely too expensive. It would also have been very inconvenient because of the distance of the machinery from the house.

- (d) The present well does not provide sufficient water. This, together with the spring provides sufficient water during part of the year, but not sufficient during the dry season.
- (d) In this geographical situation water is very difficult to obtain under any circumstances, and every available source must be used. The engineer responsible for the supply, therefore, has to overcome a very difficult situation through no fault of his own, but because of physical conditions in a semi-arid area where no surface supply is available except for the spring.
- (f) As each individual source is deficient by itself, with no known means of improvement, use of both the present well and the spring should be continued, and the product of another source should be added to the supply.

5. Recommendation

Since conditions necessitate further

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11.

augmentation of the supply, there is no doubt of this fact, considering the necessities of the School itself, together with the large amount of stock to be supplied, entirely by artificial means - there is no other solution in the opinion of the writer, than to provide another supply. The two present sources of supply should be continued.

In view of this, one can see no other solution than to drill another well to a minimum depth of 300 feet, just outside the building and a few feet to the east or south, whichever is the most convenient.

The question of the new well being so near the old one was considered, and no reason could be adduced against locating the well five or six feet away regardless of the reason for the partial failure of the old one.

This new well should be sufficiently close to the present well so that a walking beam arrangement would connect the present pumping jack to the rods in the new well, for transfer of power from one well to the other when necessary.

If the well were located at a distance the cost of construction would increase greatly.

Facts learned by Mr. Sill in drilling the other well would be invaluable in drilling a new one. He drilled the old one with his own small rig. He now is an employee of T. Maughan of Lethbridge who has a large rig

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

12.

at present lying unused 8 miles south of Pincher Creek and about 25 miles from the School. It was recently used in cleaning the well at school on the Blood Reserve. Incidentally, Mr. Sill charges \$100 for renovating an old well and \$1.50 per foot for drilling a new one.

One question which cannot be definitely answered is "What is wrong with the old well?" The supply may fluctuate or the well may be inefficient. If the former then augmentation is necessary. If the latter than a new well is a necessity. It is also suggested that a last examination be made of the old well at a cost of \$100 before starting the new one while the drilling rig is at the school.

6. Estimates.

The cost of a new well is as follows:-

Drilling 300 feet @ \$1.50	\$450.00
Casing 300 feet @ \$1.11	333.00
Piping P. & R. 300 feet @ 74.54	223.62
Working Barrel 2-3/4"	23.50
Octagonal Rods 1-3/8" 300' @ 41¢	123.00
Walking Beam. Connections.	75.00
Pipe Connections.	20.00
Alterations in walls of present building	30.00
Examination of old well.	<u>100.00</u>
Total.	1378.12

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

13.

Addendum re Walking Beam

Since the above was written the general design of the means of transferring power from the pump jack, which is being left in its present position over the old well, to the new well has been the object of further study.

In the first place, the writer does not know any duplicate of this idea of pumping from two wells by means of one jack and thus needs to proceed carefully. No detailed plans are being drafted as it would appear to be the work of a more experienced mechanical expert to design contact points of rods and walking beam, also the pivot in the wall. A 5" I beam should carry the necessary weight of approximately 1300 pounds, (doubled because of sudden strain?) and requiring between one and two horse power.

Secondly, the walking beam might work more efficiently if it were sufficiently long so that the inner end were directly over the centre of the old well so it could be connected to the centre plunger of the jack. If the new well were placed at an equal distance outside the well the total length of beam would be about 6½ feet. This would eliminate unequal strain on the shaft as would be the case if the rod were joined to the large cog wheel of the jack next the wall.

The upright rod, of course would move

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

14.

through a small arc, with a displacement of possibly 1/2" from the vertical. This might be the cause of difficulty in designing.

Thirdly, there appears to be no reason for doubting the possibility of activating both pumps simultaneously. In this way the weight of columns of water, etc., would be partially equalized and the delivery of water increased. The apparatus, of course, should be designed so that each could work independently.

Lastly, instead of using the walking beam the possibility of lengthening the overhead shaft to a point, say 3 feet outside of the building, has been considered. The concrete basement wall would then be cut through and an extra alcove made directly south of the pump jack. The building itself would need to be extended to cover the shaft. The present pulley shaft near the roof, however, is not very strong and might not stand the extra strain.

DEPARTMENT OF INDIAN AFFAIRS
CANADA

IN YOUR REPLY REFER TO
No. 406-11A.R.C.
ALSO TO DATE OF THIS LETTER

INSPECTOR'S OFFICE,

PB CALGARY, ALTA., February 20th, 1934.

116-2-5

Sir:

I beg to refer you to Department's letter No. 116-2-5 of the 2nd ultimo and my reply thereto dated the 9th ultimo, in connection with the water supply at the Sacred Heart Indian Residential School on the Peigan Reserve. I now have to report that on January 23rd I left for the Peigan Reserve in company with Mr. P. A. Fetterly, Assistant Hydraulic Engineer of the Dominion Water Power Bureau here. His report on the water situation was forwarded to his Department at Ottawa and our Department has probably been furnished with a copy of this, but in case you have not received this I am forwarding an extra copy of the report which I have on hand; also a copy of the blue print. Mr. Fetterly handed me this report just as I was leaving for the Peace River country and this is the first opportunity I have had of going over it. I might say that Mr. Fetterly has discussed the matter thoroughly with me and he has made a very detailed report on the situation, so I have nothing to add to his remarks, which cover every phase of the situation.

I would now suggest that Mr. Fetterly's recommendation which appears on Page 12 of his report, be followed out: Viz.,- that an examination be made of the old well at a cost of \$100 before starting a new one; as I know there was sufficient water in the present well at one time, as shortly after it was completed I was there and had the well tested. There is a possibility that the source from which the water comes in the bottom of the well is clogged up with sand. Of course it would have to be understood....

The Secretary,
Department of Indian Affairs,
O T T A W A .

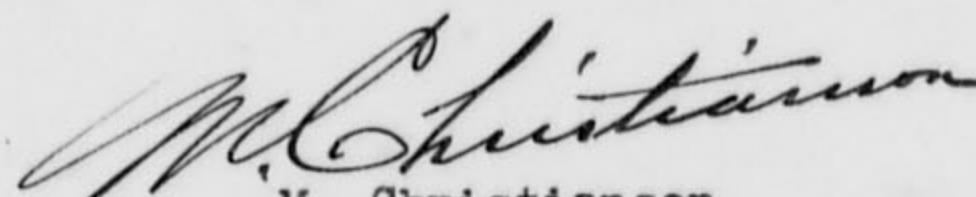

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

- 2 -

stood that if sufficient water could not be found in the old well authority for a new well should be given at the same time so that the well drillers would not have to move their outfit away from the premises. This should be gone on with as soon as possible while the outfit is in that vicinity, as you will note that Mr. Fetterly mentioned that it is now located about 25 miles from the school. I would also suggest that we secure the services of Mr. Fetterly at the school while the old well is being examined.

Your obedient servant,

M. Christianson,
Inspector of Indian Agencies,
Alberta Inspectorate.

Calgary, Alta.
Feb. 20, 1934.

Peigan Indian Agency,
Brocket, Alta.

Dear Sirs:

The writer examined the Electric Plant in the Roman Catholic School on your Reserve and have found the following troubles: This Plant Needs a new set of Valves and Valve Stem Guides, New Plungers for the Gasoline Pump, a new Set of Rings and possibly Piston Pins. It also needs a new Distributor Ring for the Magneto, High Tension Leads for the Magneto and some repairs to the Copper Tube from the Gas Tank. The bearings also need taken up, both Rods and Mains. The Exhaust Valves of this engine are worn well down into the Block and will need to have Valve Seat Inserts put in and the New Valves fitted to these Seats. The Commutator on the Generator will need to be turned down and the Mica Undercut.

We will undertake to supply the necessary parts and do the work necessary to put this Plant in first-class running shape for the sum of Eighty-three Dollars (\$83.00).

Yours truly,

BROTHERSTON ELECTRIC COMPANY LIMITED.

March 9, 1934.

Dear Sir,-

I have your letter of the 19th ultimo, enclosing a report from Mr. Fetterly, of your Calgary office, with reference to the condition of the water supply system at the Sacred Heart Indian Residential School near Brocket.

After carefully considering this report it is agreed that before proceeding with the drilling of a new well the old well should be cleaned, as recommended by Mr. Fetterly. You may, therefore, instruct him to have this done. It is noted that the cost will be \$100.00. After the well has been thoroughly cleaned Mr. Fetterly should submit a further report and advise whether it would be absolutely necessary to provide an additional well.

Yours very truly,

A. F. MacKenzie.

Dear Sir,-

The following is a letter with reference to the Lister lighting plant at the Sacred Heart Indian Residential School, which was addressed to Asst. Indian Commissioner Perry at Victoria in error.

"Replying to your letter of the 26th with reference to the Lister lighting plant at the Sacred Heart Indian Residential School, I beg to say that you may arrange with the Brotherston Electric Company Ltd. to have the necessary repairs made. It is noted that the cost will be \$85.00."

Mr. Perry has been advised today by wire to forward this letter to you.

Yours very truly,

A. F. MacKensie

RECORDED

Sir,-

I have received your letter of the 9th instant authorizing cleaning out the deep well at the Sacred Heart Indian Residential School near Brockton, at an estimated cost of \$100. Copy of this letter has been sent to Mr. Hoover and he has been instructed to have the cleaning carried out by the Mr. Sill mentioned in Mr. Fetterly's report on the Water Supply System dated February 6th last.

Mr. Hoover has been instructed to advise me whether or not this can be done before the end of the present month in order that arrangements may be made to provide payment of the account.

Your obedient servant,

J. T. Johnston,
Director.

Dear Sir:-

I have the honor to acknowledge receipt of letter dated March 8th, instant, No. 116-2-5, which was addressed inadvertently to me instead of to the Indian Agent at Brocket, Alberta.

I now beg to say I received the Department's wire of March 12th requesting me to forward this letter to the Indian Agent, Brocket, Alberta, and I have done this today.

P/KD.

Dominion Water Power and Hydrometric Bureau

Calgary, Alta. March 22, 1934.

Sir,- Re Sacred Heart Indian School, Brocket, Alta.

Immediately on receipt of your letter of the 12th instant, File 41167-W, regarding the rehabilitation of the deep well at the above named school, I tried to get into touch with Wm. Maughan at Lethbridge by wire. Mr. Maughan owns practically all of the drilling rigs in the general vicinity. Mr. Ben Sills was an employee of his but has been incapacitated for some time with an injured hand. However, Joe Maughan is an experienced driller.

Mr. Maughan phoned today that he has only now been able to ascertain conditions regarding his rig. The rig is now engaged at a well 18 miles south west of Brocket and it would be very difficult to pull tools and move 18 miles and then back, and do a good job before March 31. He is anxious to do the work but is reluctant to do it at present.

Personally I think it would be inadvisable to attempt to do the work within the time as it would have to be hurried. In addition, Mr. Fetterly, who will supervise it, expects to proceed to Prine Albert and Delmas next week.

I understand, however, that without further instructions from the Indian Department I will proceed with the cleaning process as soon as possible. Mr. Maughan stated today that the rig would be free about April 15.

I might mention that from last advices the school is sufficiently supplied at present by the spring, the present well and snow.

Your obedient servant,

'SGD' O.H.Hoover,

Engineer-in-Charge.

The Director,
Water Power & Hydrometric Bureau,
Department of the Interior,
Ottawa.

Mr. Maughan has just phoned that he can move on to the work about March 31.

FILE NO. 4919

DOMINION WATER POWER AND HYDROMETRIC BUREAU

File
CALGARY, ALTA. April 10, 1934.

Re Sacred Heart Indian School, Brocket, Alta.

Sir,-

With further reference to my letters of 20th and 22nd proximo I wish to state that Mr. Fetterly interviewed Mr. Tom. Maughan of the Union Drilling and Development Co. 814 Lancaster Bldg., Calgary, Alberta, regarding the proposed rehabilitation of the original well at the above-named school.

This firm owns the drilling rig which was to be used. Mr. Maughan stated that his brother, Mr. Joe Maughan, together with Mr. Ben Sill, mentioned in former letters as the original driller of the well, visited the site about April 1. They found that the cost of transporting the rig, which would have to be dismantled for shipment, would cost the most of the \$100 appropriated for the whole work. This excessive cost is caused by the present state of the roads, as the frost is now coming out.

Transportation would have been comparatively easy when the roads were frozen but they will now be impassable for a time.

However, these men inspected the well and thought it possible that the reservoir around the bottom of the hole has been partially denuded of water and now fills again only slowly. If this be the case a new well would need to be located further away than at first proposed. This matter will have to be decided later. Meanwhile, they thought that the best plan to follow at present was the attempted cleaning of the old well.

I might say that I have lately heard that an attempt was made several years ago to pull the inside pipe. It dropped from a height and injured the cylinder but was afterwards removed and repaired. They may have also tamped the sand if any were present in the casing. However, these matters should be cleared up when the well is examined.

I now consider, more than ever, that the

2.

development of the spring was a fortunate move.

I would therefore recommend that the appropriation of \$100 be renewed, the work to be done when transportation of the rig is possible.

Your obedient servant,

J. H. Hoover

Engineer-In-Charge.

Plumbing, Steam and Hot Water Heating.

Pincher Creek., Alta April, 11th. 1934.

Mr Webb,
Acting Indian Agent.
Brocket., Alta.

Dear Sir;-

I beg to submit the cost for the repairing of
the septic tank at the Sacred Heart School.

The size of the tank is twenty two feet by eight
feet. There is about three feet six inches of earth on the top
of the tank. I will remove this, and construct a ten inch-
reinforced concrete cover on the tank, with a cast iron man-hole
in each compartment. The gravel will be clean, and the mixture
will be six parts of gravel to one of cement, with five eighth
rods a foot apart, and hog wire over the whole top of the tank.

I can supply all of the material and labour for
this work, which I assure you will be done as specified, for the
consideration of One Hundred and Eighty two dollars.

Yours truly,

Signed.....Stanley Pearson.

DEPARTMENT OF INDIAN AFFAIRS
CANADA
File No. 2-34.

OFFICE OF
INDIAN AGENT
Peigan Indian Agency, Brocket., Alberta.

April, 11th. 1934.

Sir,

With reference to the Septic Tank installed at the Sacred Heart Indian Residential School, at the time of the erection of the school, there has been continuous trouble in connection with the sewage system.

Yesterday, the Principal (Rev. J. L. Leverh) called in, and at his request I went out to the school. Mr. Pearson (the plumber) was there and he showed me very plainly how the septic tank had not been operating since it was installed. The valves had been plugged with concrete, presumably at the time it was installed, accidentally, also the overflow pipes were each covered with a brick, the covering of the septic tank was with two layers of wooden planks, these partly owing to the tank inefficiently operating, had become rotted.

Mr. Pearson suggests (as per his letter attached) to remove the dirt on the top, take off the old planking and put a good permanent top of re-inforced concrete in place of the wood. I would strongly recommend this course, not only as a lasting repair, but also on account of this tank being located in the playground, where at any time in the near future, the top would cave in with disastrous results to a child being on the spot.

May I be favoured with an early reply please.

I have the honour to be

Dear Sir,-

Replying to your letter of the 11th with reference to the septic tank at the Sacred Heart Indian Residential School I beg to say that it is not considered necessary to install a reinforced concrete top to the septic tank. Planks properly protected should meet the requirements. If any of the planks have rotted they may be renewed.

Sir:

The enclosed account covering emergency repairs at the Sacred Heart Indian Residential School was included in the account which you recently forwarded to the Department. Please note that accounts for expenditure at Indian residential schools should be forwarded separately. You should, therefore, attach this account to a proper voucher form and return same for the Department's consideration.

In connection with this expenditure, I would refer you to the instructions contained in circular letter of November 14, 1932. Clause 1 of this letter reads, in part, as follows:

"Should it be necessary to incur expenditures before departmental authority has been obtained, the official responsible for incurring such expenditure must report same immediately to the Department for approval."

No report has been received from you regarding the necessity for incurring the expenditure mentioned on the enclosed account.

Your obedient servant,

A. F. MacKenzie

Peigan Indian Agency, Brocket., Alta.

May, 15th, 1934.

Sir,

I am returning herewith Voucher No. 29
(septic) covering plumbers labour charges for repair to
the Sptic tank at the Sacred Heart Indian Res.
School, on this reserve.

Regarding your letter No. II6-2-5 dated
May, 10th returning these bills for presentation
to the Department separately, I referred to the
trouble we were having in this tank not operating
properly, and my visit to the school in this connection,
in my letter No. 2-34 under date of April, 11th,
I admit it was in a general way only, as the tanks
were blocked completely up and I was unable to
estimate the amount of work necessary to put it in
working order.

Now we have uncovered the whole of the tank
top, all the planks are found to be unfit for use,
and under authority of your letter No. II6-2-5 April, 17th
I have ordered new planks to make a new similar top,
at a price of \$57.30 F.O.B. Pincher Creek.

I have the honour to be,

Sir,

Your obedient servant,

T. W. Victor Webb
T. W. Victor Webb,

File No. 2-34.

Peigan Indian Agency, Brocket., Alberta.

July, 13th. 1934.

Sir,

With reference to the Baking Oven
at the Sacred Heart Indian Residential
School, the firebox is completely burnt out
also the flues.

Mr S. Pearson (Blumber) was out to
inspect it and ascertain the cost of repairing
it, I am submitting herewith his estimate for
the work to be done, viz: "The repairs to the
bake oven at the R/C School would cost
approximately ninety five dollars, and the
labour of installing same, thirty dollars.
If these repairs are put in the oven, it will
be just as good as a new one."

May I receive authority to have this
work done during the summer holidays, whilst
the* it is not so much in use.

OFFICE OF
INDIAN AGENT

Peigan Indian Agency, Brocket., Alberta.

September, 24th. 1934.

Sir,

With reference to the Lighting Plants at The Sacred Heart Indian Residential School and The St Cyprian's (Anglican) Indian Residential School, I beg to request the Department to issue authority to have the batteries replaced with new ones, at an approximate cost of \$1,000.00.

The present ones were placed in operation in November, 1931 in both schools, now they are worn out, being sulphated so badly that the sediment is up to the plates in places, and they will not hold the charge. Winter is approaching, with the inevitable heavy drain on the batteries, and the new ones should be installed as soon as possible, may I be favoured with an early reply.

I may add the present present batteries, were supplied by Geo. Scougall (Macleod) for the St. Cyprian's School, these being "Globelite", and at the Sacred Heart School, Mr Brotherston (Calgary) rebuilt the old ones with new elements.

I have the honour to be

Sir,

Your obedient servant,

October 1st, 1934.

MEMORANDUM:

The Honourable the Superintendent General,-

New batteries are required for the lighting plants at the Sacred Heart (R. C.) and the St. Cyprian (Anglican) Indian Residential Schools, on the Peigan Reserve, No. 147, Electoral District of Macleod, Alberta.

The present batteries at both schools were supplied in November, 1931, and they are now worn out. The batteries at the Sacred Heart School were supplied by the Brotherston Electric Company, Limited, Calgary, and the ones at the St. Cyprian School, by George H. Scougall, Macleod, Alberta.

The cost of the batteries for each school will be, approximately, \$500.00. Funds for the purpose are available in the Appropriation for the current fiscal year.

I would be pleased to be advised of the names of the firms with whom the orders are to be placed.

Harold W. Hill

Deputy Superintendent General.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

116-2-5.

October 3, 1934.

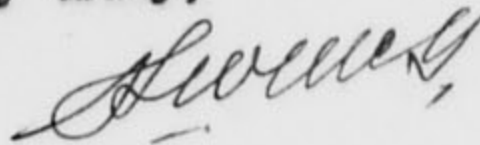

Dear Mr. Christianson:

A request has been received, through the office of Mr. Lancaster, Indian Agent, Brocket, to have the batteries replaced at each of the Sacred Heart and St. Cyprian Indian Residential Schools. The batteries at present in use at each of these schools have been in operation since November, 1931. The cost of supplying new batteries will be, approximately, \$500.00 for each school.

It has occurred to me that it might be possible to have these schools connected up with the lines of the Calgary Power Company and thus obtain light and power, obviating the necessity of renewing batteries for the lighting plants from time to time.

I would request that you report as to the advisability of supplying these schools with light and power and installing the necessary power line from the Calgary Power Company plant to the schools. You should state the distance it would be necessary to extend the power line to each school and the approximate cost. I shall be pleased to have as complete information as possible in this connection.

Yours very truly,

Deputy Superintendent General.

M. Christianson, Esq.,
Inspector of Indian Agencies,

NO. 406-11

ALSO TO DATE OF THIS LETTER

Dear Doctor McGill:

I have the honour to acknowledge receipt of your letter No. 116-2-5 of the 3rd instant in connection with the request of the Sacred Heart and St. Cyprian Indian Residential Schools on the Peigan Reserve, to be supplied with new batteries for their lighting plants. Immediately upon receipt of your letter I got in touch with the Calgary Power Company and they are going to give me an approximate price in a few days as to the cost of connecting the schools up with the power line. I asked them, at the same time, to give a price on connecting up with the Agency, as the power line is straight North of the Agency and the St. Cyprian School is practically straight of the Agency, so the power line would have to pass the Agency. This, of course, will be a separate item and need not be gone into at the present time.

Just as soon as I receive the necessary information from the Calgary Power Company it will be forwarded to you for consideration.

Your obedient servant,

Dr. H. W. McGill,
Deputy Supt. General,
Dept. of Indian Affairs,
OTTAWA.

M. Christianson,
Inspector of Indian Agencies,
Alberta Inspectorate.

116-2-5.

Ottawa, November 2, 1934.

Sir:

I beg to refer to your 406-11 of the 10th ultimo, in which you stated you were obtaining from the Calgary Power Company an estimate of the cost of connecting the Sacred Heart and St. Cyprian Indian Residential Schools, on the Peigan reserve, with their power line. As you have been informed, both these schools have requested new batteries for their electric light system. The Department is anxious to come to a decision as to whether it would be cheaper in the long run to continue present lighting arrangements and supply the new batteries or provide the cost of connecting these schools with the Calgary Power Company's lines. I should be pleased, therefore, to have the estimate of the cost of making the connection with the Power Company's lines, for each school, as soon as possible.

Your obedient servant,

A. F. MacKenzie

November 3rd, 1934

Mr. M. Christianson
Inspector
Department of Indian Affairs
507 Calgary Public Bldg.
Calgary, Alta.

Dear Sir:

A short time ago you made some inquiries regarding the cost of supplying the Agency and the two schools at Brocket with electric service. As mentioned to you at that time, these prospective loads are very small and widely scattered, each requiring several miles of expensive 13,000 volt line to reach them.

We approached the Canadian Pacific Railway Co. with regard to electrification of their pump at Brocket in order to try and obtain some additional revenue from this point but we are advised that the Canadian Pacific Railway Co. is unwilling to consider any change at the present time.

In order to extend our transmission line and install a distribution system for the Agency buildings at Brocket, we would have to be guaranteed a yearly revenue of \$1,025.00 in order for us to break even on the fixed charges on the line itself, plus energy, maintenance and replacement costs.

The extension to the St. Cyprian Anglican School requires a further extension of approximately 3-3/4 miles and we would expect a guaranteed revenue of \$950.00 per year from this school.

The Roman Catholic School is located approximately 4 miles beyond the Anglican School and the guaranteed yearly revenue from this point would have to be \$1,000.00.

IN YOUR REPLY REFER TO

406-11

ALSO TO DATE OF THIS LETTER

Dear Doctor McGill:

I have the honour to acknowledge receipt of your letter No. 116-2-5 of the 3rd ultimo, in connection with connecting Sacred Heart and St. Cyprian Indian Residential Schools on the Peigan Reserve with the Calgary Power Company's high power line which runs across the reserve. I immediately took this matter up with the Calgary Power Company and have just received their reply. I am attaching hereto their letter, which speaks for itself. The reason I included the Agency in the Estimates was that the power line that would run to St. Cyprian School would have to pass near the Agency. You will note that the Department would have to guarantee a revenue of \$1000.00 from each school, and the same from the Agency, practically \$3000.00 in all, and I think this project is out of the question.

Should the Department contemplate purchasing batteries for the two schools, I would strongly recommend the ironclad battery handled by the Bruce Robinson Electric Company. The cost would be approximately \$700.00 for each school, and the batteries carry a 7-year guarantee.

Your obedient servant,

Doctor Harold W. McGill,
Deputy Supt. General,
Dept. of Indian Affairs,
O T T A W A .

M. Christianson,
Inspector of Indian Agencies,
Alberta Inspectorate.

*Hydro power apparently too
expensive - Please arrange

Ottawa, November 14, 1934.

Sir:

I have been directed to acknowledge receipt of your letter of the 7th instant, enclosing a communication from the Calgary Power Company, Limited, with reference to the cost of supplying the Sacred Heart and St. Cyprian Indian Residential Schools and the agency on the Peigan reserve with electric service.

In reply I have to say that, owing to the cost involved, it is considered that this project is out of the question, and we are therefore not prepared to proceed further in the matter.

As you were informed, it will be necessary to have the batteries replaced at the Sacred Heart and the St. Cyprian Schools, and I would request that you arrange for the purchase of same. You should obtain prices for the supplying of the batteries, of the type required at each school, from the following firms:-

George H. Scougall, Macleod, Alta.
Pincher Creek Motors, Pincher Creek, Alta.

Purchase should be made from the firm quoting the lowest price. After the batteries have been delivered, you should obtain an account, in triplicate, covering the cost for each school, separately. These accounts, you should attach to proper voucher forms, certify in the usual manner and forward for payment.

Your obedient servant,

A. F. MacKenzie,
Secretary.

December 15th, 1934.

Dear Doctor McGill:

I have the honour to report on an inspection of the Sacred Heart R. C. Indian Residential School in the Peigan Agency. Conditions at this institution are very good. This is one of our best schools. I found there were 50 children on the register and 48 in attendance.

BUILDINGS & EQUIPMENT:-

I went over the buildings, equipment, machinery, &c. The outside buildings are all in a first class state of repair. I found that some new buildings had been put up by the Principal: A lean-to shed had been built to the barn with a roof to protect cattle during storms. They had also built a stable out of logs and a shed East of the other buildings where the calves are being taken care of.

The machinery all seemed to be in Al shape and giving satisfaction. The same can be said about the boiler and Lister Bruston engine at this institution as at St. Cyprian's: The engineer in charge of the plant and boiler

BUILDINGS &C. (Continued).-

is one Omer Dubois, who acts also as Farming Instructor. He is not a first class engineer by any means but keeps the plant well oiled and greased, &c., and does not tamper with it, and so far he has had very little trouble. I would recommend that this engine also be overhauled by an expert next summer. I think this would save money in the long run, and would give the engineer an opportunity of learning more about the engine.

The school building is in good condition except for wear and tear. Some of the walls need painting and quite a bit of plaster has come loose and is falling off the walls in the basement. The Sister Superior brought to my attention that if the Department would supply some paint, oil, &c., in the spring, they would do a lot of inside decorating during the summer holidays. My opinion is that a certain amount of paint should be supplied every year so as to enable the Staff to keep the buildings in good shape. I shall submit a list of the school's requirements to the Department. The outside buildings required painting very badly as well, but as I have said in other reports to the Department, we will have to get along without it until such time as funds are available.

The Principal informed me that the roof of the school was leaking last spring and they had done something to remedy this, but did not know whether it was effective as they had had no rain since. I presume that in a short time the roofs on both these schools will be gone over as

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Buildings, &c., (Continued),-

with the terrific winds that prevail there a roof requires constant repairing.

A few years ago a refrigeration plant was built at the school on the same plan as that built at St. Paul's School on the Blood Reserve by Mr. Weston. Father Lavern informs me that his plant has never been satisfactory, whereas the one at St. Paul's School has always given perfect satisfaction. I would like to have the Department give me authority to have Mr. Weston look over this plant sometime. This would not be expensive as I am sure Mr. Pugh would drive him up to the school.

The Department will recall that we had a lot of trouble about the water at this institution last year: I took Mr. Fetterly of the Dominion Water Power Branch down to the school, and while there he went into the matter thoroughly and recommended that the well be cleaned out. This work was done with good results and the school now have ample water in the well; also in the spring which was developed some few years ago.

FARMING:-

The live stock at this school consists of 13 horses, 57 head of cattle of which 35 are cows and at the time of my inspection they were milking 14; 40 pigs, 110 chickens, some geese and turkeys. The school threshed 2430 bushels of wheat and 1260 bushels of oats and 348 bushels of barley. They own their own threshing outfit and the tractor is also used on the farm. A certain amount of the work on the farm is done by the boys. The school harvested 10 tons of potatoes and all other garden

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

ARCHIVES PUBLIQUES
CANADA

Farming. (Continued).-

truck in large quantities; more than enough to take care of their requirements. During the last year 2000 pounds of butter were made and this all goes to the staff and children, so the children have butter on the table every day.

The grounds around this institution are in excellent shape: I only hope you have an opportunity of seeing them sometime in the summer time. This is one of the best examples I know of as to what can be done on the bald-headed prairie, even in Southern Alberta. They have the most beautiful grounds you could wish to see: Trees, hedges and shrubs all around the place.

TRAINING:-

The children here receive a very good training in household science and outside work, which fits them very well for their life on the reserve after they graduate from school.

I learned from the Principal that no fire drill was carried on at this school and the reason for this was that there was a night-watchman on duty. I instructed him that even with a night-watchman there a fire drill should be held periodically.

HEALTH:-

The same can be said about the children of this school as of St. Cyprian's: that I have never seen them looking any better. They certainly present a happy and well-cared-for appearance. I checked over the clothing and found that each child has several changes and is warmly clad.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 3)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

- 5 -

GENERAL:-

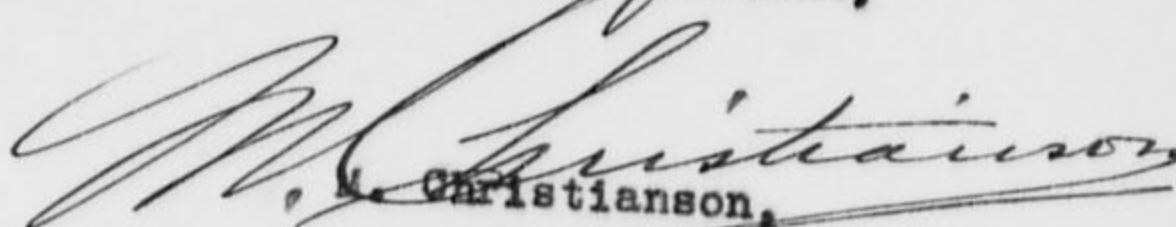

As a whole I have always found this school very satisfactory. Father Levern is an exceptionally good manager and a good provider and is running a good farm and producing ample food stuff from the garden and cattle to feed both children and staff well at a minimum of cost, and this is an achievement especially in that part of the country.

The Staff consists of 10 Sisters of Charity, the Principal, 1 lay-brother, one farming instructor who also acts as engineer, and an extra man is hired during the summer.

This school also has a number of children of school age out on the reserve who are not attending school, and the same remarks regarding recruiting as I made in the case of St. Cyprian's School, apply here.

I trust this report will be of interest to you.

Your obedient servant,

M. Christianson,

Inspector of Indian Agencies,
Alberta Inspectorate.

December 20, 1934.

Dear Mr. Christianson:

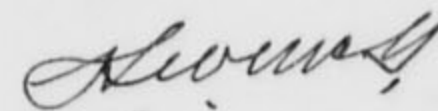

I have your 406-11A. R.C., of the 15th instant, reporting on your recent inspection of the Sacred Heart Indian Residential School. I am pleased to note that you found the children in good health, well clothed and fed, and that the management of the school, under Reverend Father Levern, is very satisfactory. I have noted the work that has been carried out by the Principal and staff. Credit is due for the improvements to the grounds around this institution.

Regarding the overhauling of the Lister-Brunston engine and also the painting and other repairs referred to by you, I would request that, early next spring, the Agent or yourself submit a report, setting forth in detail these requirements and giving an estimate of the cost. You may have a competent man examine the refrigeration plant and report what would be required to place it in a satisfactory working condition.

The Principal should carry out fire drill, and I note you have instructed him that these drills should be held periodically.

I note, further, that this school has now an ample supply of water in the well which was deepened last summer.

Yours very truly,

Deputy Superintendent General.

Dear Doctor McGill:

I have the honour to acknowledge receipt of your letters No. 116-2-5 and No. 116-1-1 of the 20th instant regarding my inspection of the two schools in the Peigan Agency.

I shall be glad to know if it is the intention of the Department, when spring comes, to do any outside painting at either of these institutions, or is the painting referred to simply material for the interior? If there are any funds available of course I can submit an estimate of the cost of the exterior painting, but I would prefer to know beforehand if the Department intends to have this done.

Your obedient servant,

Sir:

I have been directed to acknowledge receipt of your 406-11A of the 27th ultimo, requesting to be informed concerning the exterior and interior painting that will be authorized at each of the Sacred Heart and St. Cyprian Indian Residential Schools, in the Peigan agency, next spring.

In this connection I have to say, for your private information, that a small appropriation has been included in our Estimates for the next fiscal year. The Estimates are now before Treasury Board, and I am not in a position to state at the present time whether the amount requested for painting and repairs at these schools will be allowed. I would suggest that you draw this matter to the attention of the Department next spring, giving an estimate of the cost, separately, of the painting - exterior and interior - of these schools and also any minor repairs that may be required.

Your obedient servant,

A. F. MacKenzie,
Secretary.

PB CALGARY, ALTA. January 14th, 1935.

Dear Doctor McGill:

I have the honour to acknowledge receipt of your letter No. 116-2-5 of the 20th ultimo and in the second paragraph thereof you state that I may engage a competent man to examine the refrigeration plant at the Peigan R. C. Indian Residential School.

In this connection, I beg to state that I got in touch with Mr. R. Weston of Cardston and I am just in receipt of a letter from him stating that he has been there and that all that is wrong with the plant is the ventilation, and this will have to be remedied before the plant is of any use. I was fairly sure that this was the trouble there. Mr. Weston states that he is prepared to go up to the school with his own car and a helper and put the plant in first class order for \$45.00, and there will probably be about \$10.00 worth of lumber required as well.

I would ask that this expenditure be authorized as the plant as it is is of no use.

Your obedient servant,

M. Christenson,
Inspector of Indian Agencies,
Alberta Inspectorate.

OFFICE OF
INDIAN AGENT

FEB 9 1935

Peigan Agency, Brocket, Alta.

January 30th. 1935.

Sir.- In regard the attached Voucher, in favour of Geo. H. Scougall, Macleod, Alta. I note that Mr Scougall has included freight amounting to \$54.78 in his account for batteries, making a total of \$502.28, whereas Mr Morgan's account for the same batteries amounted to \$447.50 as no freight was charged. However I have secured the receipted freight bill from Mr Scougall and attached same to voucher.

I have the honour to be,

Sir,

Your obedient servant,

H.C. Lancaster

Ottawa, February 13, 1935.

Sir,-

The Department recently received your voucher No. 188, in favour of Pincher Creek Motors, covering the cost of the batteries supplied to the St. Cyprian Indian Residential School. This account read:-

1 set G. D. 13 Globelite Batteries	-	\$503.50
Less allowance for 56 old cells	-	<u>56.00</u>
Net cost	-	<u>\$447.50</u>

We are today in receipt of a voucher from Mr. Agent Lancaster, in favour of Geo. H. Scougall, covering the cost of batteries supplied to the Sacred Heart Residential School. This voucher reads:-

1 set G. D. 13 Globelite Batteries	-	\$503.50
To refund freight	-	<u>54.78</u>
		\$558.28
Less allowance for 56 old cells	-	<u>56.00</u>
Net cost	-	<u>\$502.28</u>

You will note from the above that Mr. Scougall is charging for freight whereas Pincher Creek Motors did not. Please let me know, as soon as possible, what quotations you received from both these firms and why Scougall is charging freight. Payment of Scougall's account will be withheld until your reply is received.

Your obedient servant,

M. Christianson, Esq.,
Inspector of Indian Agencies,
Calgary, Alta.

INSPECTOR'S OFFICE

IN YOUR REPLY REFER TO
406-4A.
ALSO TO DATE OF THIS LETTER

PB CALGARY, ALTA. March 1st, 1935.

copy

Dear Sir:

I have to bring to your attention my letter No. 406-11A.R.C. of the 28th of January, last, in connection with voucher rendered by Mr. Geo. H. Scougall of Macleod for batteries furnished to the Sacred Heart School: If you look up my letter you will see that I asked you to prepare the voucher and forward it through this office. Instead of that it was sent direct to the Department. The voucher in question was for \$502.28 whereas the Pincher Creek Motors supplied the batteries to St. Cyprian's School for \$447.50. The reason the voucher was forwarded to you was to avoid delay, as I had to take the matter up with the representative of the Fairbanks Morse here, and he was absent from the city at that time. If this difference had not been noticed by the Department we would have been called upon to pay about \$55.00 extra to Mr. Scougall.

You will please change the amount of your copy of the former voucher and same in your voucher book, from \$502.28 to \$447.50, as the corrected voucher is now going forward to the Department. In future be very careful as to whether the voucher is to go through this office or to the Department, direct.

H. C. Lancaster, Esq.,
Indian Agent,
BROCKET, Alta.

Yours truly,

M. Christianson,
Inspector of Indian Agencies,
Alberta Inspectorate.

INSPECTOR'S OFFICE

PB CALGARY, ALTA. March 1st, 1935.

Sir:

I beg to acknowledge receipt of your letter No. 116-2-5 of the 13th ult. in connection with batteries supplied to the 2 Indian Residential Schools on the Peigan Reserve, and I note the Pincher Creek Motors' voucher in the amount of \$447.50 has been paid, but that Mr. Scougall's voucher is being held. In this regard I wish to state that I had great difficulty in getting prices from the 2 above-mentioned firms, as they do not handle batteries, and to get a satisfactory quotation on something about which they knew very little, was not easy. As there were only the two names on the list submitted to me, I was anxious to divide the business between them, and therefore both had to give the same price. I learned that both firms were dealing with Fairbanks Morse Company in the city here, and a representative of that firm came to see me, and it was arranged with him that the net price of the batteries to us in each case would be \$447.50. The voucher from Pincher Creek Motors was forwarded to the Department as received; but it was noted that when Mr. Scougall sent in his account it was for \$502.28. I called up the Fairbanks Morse here and found that their battery man was out of the city at the time, and awaiting his return, I forwarded the voucher to the Peigan Agency asking them to prepare same and return it to this office, so that I could make the correction on it when the matter was adjusted. I was surprised to learn that Mr. Lancaster had sent the voucher to the Department direct, and I am attaching hereto copy of a letter I have addressed to him in this connection.

I am now enclosing herewith another voucher from Mr. Scougall for the correct amount of \$447.50, and I would recommend it for immediate payment, as these people are making a very small profit on the batteries. I wish to point out that the batteries purchased for the schools 3 years ago were only 7-plate, whereas those installed now are the very best 13-plate Globelites, which are far superior to the previous batteries, and I sincerely hope they will last a year or two longer than the old ones.

Your obedient servant,

The Secretary,
Dept. of Indian Affairs,

INSPECTOR'S OFFICE

PB CALGARY, ALTA. April 12th, 1935.

IN YOUR REPLY REFER TO
NO. 406-11A.R.C.
ALSO TO DATE OF THIS LETTER

Sir:

I beg to herewith enclose in duplicate requisition for some inside paint, varnish, &c., for the Sacred Heart R.C. School on the Peigan Reserve, as instructed. The work will be performed by the sisters of the school.

Your obedient servant,

M. Christianson
M. Christianson,
Inspector of Indian Agencies,

Ottawa, April 17, 1935.

Sir:

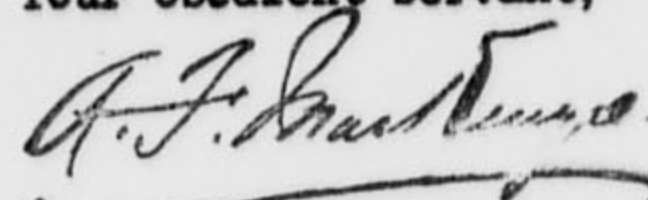

I have your 406-11A R.C. of the 12th instant, enclosing requisition for paint, varnish, etc., to redecorate the interior of the Sacred Heart Indian Residential School and also for the supplying of 20 yards of linoleum.

In reply I have to say that the Department will approve of you arranging for the purchase, from firms on the approved list, of the quantity of paint, turpentine, varnish, and the linoleum, as mentioned in the requisition - copy of which is returned herewith for your information.

Please obtain an itemized account, in triplicate, which you should certify in the usual manner and forward for payment.

Encl.

Your obedient servant,

A. F. MacKenzie,
Secretary.

- COPY -

116-2-5.

Orig. on... 116-1-5.

Ottawa, April 17, 1935.

Sir:

I have your 406-11A of the 12th instant, requesting to be informed if any funds are available for the outside painting at the St. Cyprian and Sacred Heart Indian Residential Schools, on the Peigan reserve, and also if there are funds for the purpose of having two engines overhauled.

In this connection I have to say that provision is made for the following in our Estimates for the current year, 1935-36:-

St. Cyprian School:-

Cattle shed	- \$200.
Repairs and painting	- 300.

Sacred Heart School:-

Miscellaneous repairs and painting - \$300.

I would request that you submit an estimate of the cost of the outside painting which you would recommend be carried out to the buildings at the two above named schools, including material and labour. You should state whether the school authorities could perform the labour in connection with the painting or if it would be necessary to engage outside help. You should also give an estimate of the cost of having the engines overhauled by a competent mechanic. When this information is received, the Department will be in a position to advise the amount of the painting that can be authorized at each of the schools.

You might also forward information regarding the erection of a cattle shed at the St. Cyprian School, giving full particulars as to type, cost of materials, and any outside labour required.

Your obedient servant,

A. F. MacKenzie,
Secretary.

EXTRACT FROM LETTER received from Mr. Philip Phelan, dated Calgary, Alta., May 31st, 1935, and addressed to Mr. J. D. Sutherland.

On File No. 116-2-5, you will find your letter of April 17th, with reference to repairs to the engine at the Sacred Heart School. To do this work properly, it is necessary to have a man from the Lister-Bruston Company at Edmonton. It only means spending extra money to have him call and examine the machine, and consequently, I have authorized Mr. Christianson to arrange to have him go to the school and make the necessary repairs, as these are stated to be necessary. There is money in the appropriation for painting at this school, but this matter can stand until you receive the account for fixing the engine, and if there is any money left then, the painting could be authorized.

[Handwritten signature]
The Secretary,
Department of Indian Affairs,
OTTAWA, Ont.

Dear Sir,

Re: SACRED HEART RESIDENTIAL
SCHOOL.

I visited this School on the 4th inst. with Mr. Christianson and Mr. Lancaster. I understand that paint to the amount of \$110.60 has already been allowed, and, in addition, I authorized material for the radiators at a cost of \$60.00, 600 ft. of "V" flooring, and some shelving for the girls' dormitory; 4 screen doors, and a small quantity of varnish.

The Principal requested 6 yds. of 27" heavy oilcloth for the kitchen table. This will be purchased by Mr. Christianson. I would recommend that a new sewing machine be supplied to this School.

As you are aware, this is a frame building, and the fire escape on the West side is falling away from the building. The Agent is going to have this fixed, but the cost will not be high.

Your obedient Servant,

Sir,-

Mr. Phelan, of this Department, who recently visited the Sacred Heart Indian Residential School, recommended that a sewing machine be supplied for use at the school.

I have, therefore, to inform you that an order, copy of which is enclosed, has been placed with the Singer Sewing Machine Co., here, to supply from their nearest branch office a machine of the household type. The account in triplicate, covering the cost, will be sent to you and, on receipt of the machine at the school, you will be good enough to attach the account to proper voucher forms, certify in the usual manner and forward for payment.

Mr. H. Lancaster, Indian Agent,
Brockton, Alta.

Dear Sir:-

In reply to your conversation in regard to the repairing of the tar and gravel roof at the Sacred Heart School. It is hard for me to give you a correct estimate on this work until I get the old gravel cleaned off, and examine the condition of the roof.

But I think the only thing to do is to strip this portion of the roof and relay with tar paper and ^{tar} ~~tar~~ and gravel. I can then guarantee that this portion of the roof will not leak. I would imagine that the material would cost in the neighborhood of Twenty eight dollars, and the labor ~~Twenty~~ Twenty six dollars.

Hoping to hear from you in the near future with regard to this work, I remain

Yours Truly,

S. Pearson

DEPARTMENT OF INDIAN AFFAIRS
CANADA

OFFICE OF
INDIAN AGENT

Peigan Agency, Brocket, Alta.

July 23rd. 1935.

Sir.-

We have been having considerable trouble with the Sky-lights over the engine rooms leaking at the two schools, and when Mr. Chelan was here he authorized me to have them repaired and the glass in the dome has been repaired but a recent heavy rain caused the roof at the base of the sky-light cupola to leak badly and this seems to be the source of the trouble and I enclose Mr. Pearson's estimate of the cost of repairing the roof at the R.C. school at around \$54.00.

It is possible the sky-light at the C of E school will have to be treated in the same manner.

I have the honour to be,

Sir,

Your obedient servant,

H.C. Lancaster
H.C. Lancaster.

116-2-5.

Ottawa, July 31, 1935.

Sir:

I have your letter of the 23rd instant, regarding the repairs required to the skylights over the engine rooms at the Sacred Heart Indian Residential School and enclosing an estimate of the cost of carrying out the repairs.

In this connection I have to say the Department will approve of an expenditure of approximately \$55.00 in having this work done. I enclose an encumbrance certificate, authorizing an expenditure to that amount. You should see that a satisfactory job is completed, and, when finished to your satisfaction, you should forward vouchers, in triplicate, stating in detail the work done. Please state, on each copy of your voucher, that the expenditure was incurred under authority of E. R. No. 3559.

The Department notes it is possible that the skylight at the St. Cyprian Residential School will require similar repairs. If this work is absolutely necessary, the Department would like to have a report from you, with an estimate of the cost.

Your obedient servant,

Encl.

A. F. MacKenzie,
Secretary.

116-1-5

Ottawa, October 22nd, 1935.

Sir,-

Your voucher No. 82, in favour of Mr. Stanley Pearson, amounted to \$104.50, in connection with work at the St. Cyprian Indian Residential School. This included Mr. Pearson's account of July 4th on which the following entries are shown:-

June 28th - To repairing skylight (5½ hrs. @ 90¢)	- \$4.95
2 lbs. white lead	- .50
2 lbs. putty	- .30
Total	- <u>\$5.75</u>

Your voucher No. 83 for \$5.75, also in favour of Mr. Pearson, covered repairs to the skylight at the Sacred Heart Indian Residential School. The account accompanying this voucher was dated July 4th and showed the following entries:-

June 28th - To repairing skylight (5½ hrs. @ 90¢)	- \$4.95
2 lbs. white lead	- .50
2 lbs. putty	- .30
Total	- <u>\$5.75</u>

Please let me know if the skylight at both the St. Cyprian School and the Sacred Heart School was repaired. In view of the fact that both accounts are exactly the same, it appears possible that an overpayment has been made. Your early reply would be appreciated.

Your obedient servant,

T. R. L. MacInnes.
Acting Secretary.

Brockton, Alberta,
October 29th, 1935.

Sir:

With reference to your letter No. 116-2-5 of the 22nd instant, in connection with Vouchers No's 82, \$104.50 & No. 83 for \$5.75, covering repair work, etc., done at both Sacred Heart & St. Cyprian's Indian Residential Schools on this reserve.

I beg to say that both of these vouchers are correct, as the skylights were repaired in each instance as shown. Later, application was made to the Department for extra work on the skylight at the Sacred Heart School and this was done by Mr. Pearson.

I have the honour to be,

Sir,

Your obedient servant,

(Sgd.) H. C. Lancaster,
Indian Agent.

EX'D.

Ottawa, March 18, 1936.

Dear Sir:

Replying to your letter of the 11th instant, I have to say that you may arrange for the purchase of three new toilet bowls, to replace three broken ones at the Sacred Heart Indian Residential School. It is noted that the cost will be approximately, \$15.00 for each bowl. I shall be pleased if you will arrange to have the purchase made before the end of the present month, and the account covering the cost should be dated before that time. It should reach the Department not later than the middle of April, next, in order that payment can be made from our Appropriation for the current fiscal year, before our books are closed. It is understood that the school staff will install the bowls, without cost to the Department.

Yours truly,

A. F. MacKenzie,
Secretary.

IN YOUR REPLY REFER TO
No. 406-11A.R.C.
ALSO TO DATE OF THIS LETTER

INSPECTOR'S OFFICE

PB CALGARY, ALTA., March 27th, 1936.

Sir:

I beg to bring to your attention my report addressed to Dr. McGill, on Sacred Heart Indian Residential School, R. C., on the Peigan Reserve.

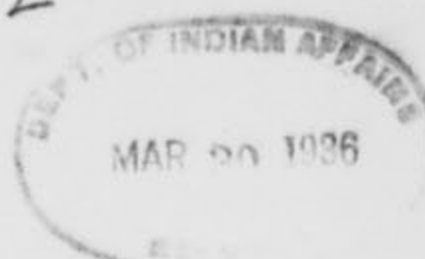

In going over the school I found that the pressure boilers in the basement had both been placed on end on a cement floor, on a level about 2 inches lower than the rest of the basement floor. Some water always drips around the tanks, and owing to the fact that they are lower than the rest of the floor, there is no way for the water to get away and it simply stays there and gradually evaporates. By that time probably a little more water has dripped in, so there is always a dampness around the tanks. The only way this could be drained would be to cut a hole in the concrete and put a pipe from the lower level where the tanks are situated, attaching it to one of the drain pipes in the sub-basement where the boiler is. The sooner this is done the better, because the tanks are beginning to show signs of rust from the dampness. Father Levern said the lay brother who was there would do this work if we furnished the material, and this should not cost more than \$10.00 or \$15.00. I would recommend authorization of this.

There is also the matter of paint for the interior of the school: For the last three years we have supplied the sisters with a certain amount of paint each year, which has certainly been put to good use, and they informed me that if the Department would supply what they asked for in the Estimates, this would be put on during the summer holidays. They also asked for linoleum for the 2 infirmaries, which rooms are 14' x 13'. This is a matter for the Department to decide, but I would strongly recommend that the paint be supplied, as it is costing us nothing for labour.

The Secretary,
Department of Indian Affairs,

INSPECTOR'S OFFICE

PB CALGARY, ALTA., October 20th, 1936.

R

Sir:

I beg to inform you that I had a call on Sunday from Mr. Lancaster, saying that the engine at the Sacred Heart R. C. School on the reserve was broken, and from the list of repairs that were required I thought it must have at least gone through a threshing machine.

I immediately got in touch with the Bruce Robinson people here, as this was an emergency repair job, as with the engine out of order the school is left without water except for what they can haul in barrels. The necessary repairs were not all on hand here and had to be shipped from Edmonton, but their expert is going down on the train tonight, and taking the parts with him.

I trust my action in this matter will be approved of by the Department.

Your obedient servant,

M. Christianson,
Inspector of Indian Agencies,

EXD.

Ottawa, November 17, 1936.

Dear Sir:

The Department finds it necessary to return your voucher No. 183 in favour of Bruce Robinson Electric Limited. The last item on the account reads, - "13 Hrs. Travelling @ 75¢" - or a total of \$9.75. It is presumed that the firm is charging for the employee's time for the return trip from Calgary to the Sacred Heart School. It is not usual for such a charge to be made, and I would appreciate your taking up the matter with the Company and advising the Department why this charge has been included on the account.

Yours truly,

T. R. L. MacInnes,
Acting Secretary.

W.C. Lancaster
DEPARTMENT OF INDIAN AFFAIRS
CANADA

Peigan Agency, Brocket, Alta.

February 4th. 1937.

Sir.-

In reference your telegram of January 13th re frequent repairs to Pumping system at the R.C. School here I beg to say this well is 200 feet in depth, and has 270 feet of pump rod in 20 foot lengths riveted together. The previous trouble was a broken rod, caused, no doubt, by the weight of the rods in action. The last trouble was the valve leathers worn out in the cylinder, caused by operating the pump when it was not pulling water.

When necessary to repair this pump, a strong tripod is erected on the roof of the building, and a windlass or chain block used to haul up the rods through the skylight, the weight in lifting the rods is several tons and requires two or three days on the job with the necessary equipment and men.

I have the honour to be,

Sir,

Your obedient servant,

H.C. Lancaster

INSPECTOR'S OFFICE

PB CALGARY, ALTA., March 19th, 1937.

IN YOUR REPLY REFER TO
No. 406-11A. R.C.
ALSO TO DATE OF THIS LETTER

Sir:

I beg to report on the water situation at Sacred Heart Residential School on the Peigan Reserve. When on the reserve on the 9th instant I visited the school, and was informed that the supply of water was inadequate; so much so that snow had to be melted during the winter to supplement the limited supply from the well and spring.

The present source of water supply, (well and spring), having been previously explained to the Department by both Mr. Inspector Christianson and Mr. P. A. Fetterly of the Dominion Water Power Bureau, Calgary, I do not consider it necessary that I do so again.

As it is, water must be spared for cooking and washing. Bath tubs are not used, there is no fire protection, and worst of all, toilets can only be flushed occasionally. This creates a great danger of the sewer pipes blocking, through lack of sufficient water pressure passing through same.

It is imperative that action be taken at once to relieve the situation. My suggestion would be that a new well be sunk outside the building and that the Dominion Water Power Bureau be asked to take charge of the work, as this will require underground connection with the pressure tanks; also a building will be required to cover the new well, &c.

Yours obedient servant,

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta.

116-2-5

Ottawa, March 24, 1937.

Dear Sir,-

The Department is advised by Mr. C. P. Schmidt, Inspector of Indian Agencies, Calgary, Alta., that the well at the Sacred Heart Indian Residential School on the Peigan Reserve is again giving trouble.

In the Spring of 1934, Mr. Fetterley thoroughly investigated the water situation at this school and, at that time, advised the cleaning of the well. This was done at a very reasonable cost and, since that time, there has been very little trouble with the water supply.

I would appreciate if you would instruct Mr. Fetterley to visit the Sacred Heart Indian Residential School at the earliest possible date and investigate and report on water conditions. It is possible that, if the well was again cleaned out, there would be no further trouble for some time and, in this event, Mr. Fetterley may proceed at once with the necessary work. If, however, he considers a new well is necessary, we will have to have full particulars, with an estimate of the cost.

Yours truly,

T. R. L. MacInnes

Memorandum:

Mr. Mills.

With reference to Mr. Johnston's memorandum of the 28th of May addressed to you, and attached letter from Mr. Hoover regarding an inspection in connection with the possibility of irrigation on the Blackfoot Indian Reserve at Gleichen and water supply for the Sacred Heart Indian Residential School on the Peigan Reserve, I beg to give you the following information.

Regarding the investigation into irrigation possibilities on the Blackfoot Reserve Mr. Hoover should be asked what amount is required for this purpose. I might say that the funds for this investigation, and any funds for work which might be carried out on receipt of Mr. Hoover's recommendations will have to be provided by the Indian band. On receipt of Mr. Hoover's reply an advance will be made to your branch, covering expenses incurred by Mr. Hoover. The attached letter has been prepared for your signature to Mr. Hoover.

With reference to the investigation of the water situation at the Sacred Heart Indian Residential School, I beg to advise that the Treasury Branch of Indian Affairs were requested on June 4 to forward a cheque for \$50.00 to cover the travelling expenses incurred by Mr. Hoover. No doubt this cheque will be forwarded to you in due course.

Engineer.

Dear Sir,-

A copy of your letter of the 22nd of May, addressed to Mr. Johnston, Controller, Water and Power Bureau, has been forwarded to this office.

With reference to the investigation into irrigation possibilities on the Blackfoot Indian Reserve at Gleichen, will you kindly advise me what amount should be sent to you to cover the expenses incurred by you in making this investigation. You should also forward your report on this matter in order that the Indian Affairs Branch may take up the question of providing funds with the Indian band.

I understand that a cheque for \$50.00 is being forwarded to this branch by Indian Affairs to cover your travelling expenses on the investigation into the well situation at the Sacred Heart Indian Residential School. Your report on this question should also be furnished.

Yours very truly,

T.S. Mills.

May 4, 1934.

Re Sacred Heart Indian School, Brocket, Alta.

Sir,-

I beg to report that, in accordance with your instructions dated April 10, regarding an attempted cleaning out of the deep well at the above-named school. An agreement was made with Mr. Joe Maughan of Lethbridge to perform the work. This was done during the week beginning April 23 and finished April 27. The cost, as agreed upon was \$100.00.

The well was cleaned out and new leathers installed in the cylinder.

Mr. W. T. McFarlane inspected the completed work on May 2, owing to the absence of Mr. Fetterly in the north. He obtained the following information:

"Depth of well	300 feet.
Height of water before baling.	160 "
The water dropped 10 ft. after 10 to 15 minutes baling, then remained steady. Both parties decided that further baling was not necessary.	
Amount baled out	260 gallons.
Inside diameter of well casing.	5-5/8 inches.
Very little dirt was found when cleaning out the well.	
Diameter of pump pipe	3-1/2"
Total length of pump pipe.	260 feet.
Diameter of working barrel.	2-3/4"
Length of cylinder.	30 inches.

Mr. Maughan believed that the pump would be efficient. The present well was drilled in 1928 and has gone dry every summer except the first one.

If another well were dug the location suggested would be near the barn where the stock could use it. There is no reason why it would not go dry when most needed."

On May 3 we received a letter from Rev. Father J. L. Lavern, Principal, reporting as follows:

"Just a few lines to tell you that Mr. Maughan has finished his work yesterday evening; before six o'clock we were pumping the well. Everything is all right for the present time. We have all of the water that we need, - right now - but God knows how it may be again in July or August."

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

It will be noted that Father Lavern is not sure of a permanent cure. Consequently the school is again to be congratulated on possessing a permanent visible supply - though small - in the spring development.

Mr. Joe. Maughan the driller, has been requested to provide an invoice in quadruplicate for his services.

Your obedient servant,

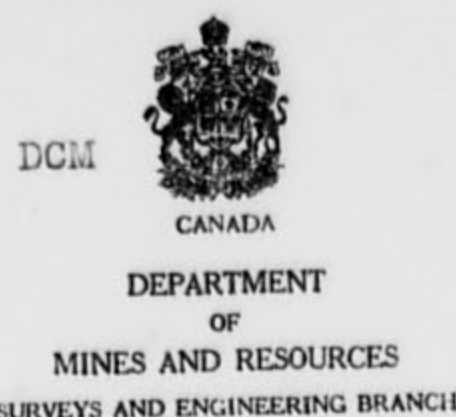

P.A. Fetterly

ADDRESS REPLY TO:
ENGINEERING AND INSTRUCTION SERVICE

QUOTE FILE

Ottawa, June 16, 1937.

Memorandum:

Mr. Wardle.

I am enclosing herewith a copy of a report by Mr. P. A. Fetterly of the Calgary Office of the Dominion Water and Power Bureau entitled "Preliminary Report on Water Situation at Sacred Heart Indian Residential School, Brockett, Alberta." This report was prepared in accordance with instructions sent the Controller, Dominion Water and Power Bureau under Indian Affairs Branch letter dated March 24th last, their file 116-2-5. As you are aware, since the date of the above letter, arrangements were made by which the Engineering and Construction Service is now responsible for work of this nature, and under the circumstances this matter was referred to us by the Dominion Water and Power Bureau.

In the letter of instructions Mr. Fetterly was requested to visit the Sacred Heart School and report on water conditions. If he considered it desirable he was authorized to have the well referred to in the attached report cleaned out, but if he considered a new well was necessary, he was to supply full particulars with an estimate of cost.

It will be noted from the report that in 1934 the well was cleaned out, but the improvement in flow only lasted a few weeks. Further, it is stated that since the well was first drilled in 1928 it has never yielded the supply expected or hoped from it. It is understood that a minimum supply of 5,000 gallons per day is required at the School. Under the circumstances, simply cleaning out the well once more would not appear to meet the situation.

Mr. Fetterly has considered means of amplifying the present supply during drought periods and first concludes that much of the water in the well is a local "ground supply", depending on heavy rainfalls. In the fall and winter months the well is dry, and the School is dependent on a spring whose maximum observed output is reported at 1,700 gallons per day. The two suggestions put forward in the report as remedies are:-

- (a) Drilling of a new well.
- (b) Removal of the School to a site near the Oldman River.

In considering (a) it is pointed out that if the hypothesis regarding the supply of water to the existing well is correct there would be little use sinking a new well near it. The cost of a new well is estimated at \$1,378.12. The cost of a well drilled apart from the school requiring pump house, piping, etc., is estimated at \$2,000.00 or more. Even then the purpose of the new well might not be served as the water might not be there.

In regard to suggestion (b) Mr. Fetterly has given no estimate of cost of moving the buildings and plant to-----

J. M. Wardle, Esq.,
Director,
Surveys and Engineering Branch,
Department of Mines and Resources,
Ottawa.

KODAK SAF

2.

to the proposed new location. This would appear the most desirable solution from an engineering viewpoint, but would, of course, be altogether dependent on the policy to be followed as to local School requirements.

In connection with the foregoing, I would point out, aside from all other requirements, the necessity of having a reliable and sufficient water supply as a fire protection, which under the present circumstances is not provided.

In view of the situation as set forth in the attached report which is the only information we have concerning this matter, there would appear to be no suitable alternative to the suggestion (b) above, removal of the school to a site near the Oldman River, and under the circumstances this action is recommended. This recommendation would of course be subject to any decision made in this connection by the Indian Affairs Branch under their local School policy or regulations.

Respectfully submitted,

T.S. Mills

Preliminary Report on
Water Situation
at
Sacred Heart Indian Residential School
Brockett.

by P.A. Fetterly, B.Sc.,
Asst. Hydraulic Engineer.

1. Purpose of Report.

A letter was received from the Controller dated March 27, 1937, containing instructions to investigate the water situation at the above-named School.

Pursuant to these instructions the writer visited the school on May 18, having been unable to do so before that date due to pressure of routine work, and also due to the fact that Mr. Schmidt, Inspector of Indian Agencies for Alberta, had also requested to make the trip in an unofficial capacity to ascertain conditions. The inspection was therefore delayed until he was free. Due, however, to the fact that Mr. Schmidt was compelled to be in the north for a further two weeks, it was decided that the inspection be made without further delay, and in his absence.

2. Observations.

(a) Preliminary Consideration.

The whole matter will be discussed in this

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

report as it presents itself to the writer at the present time and for preliminary consideration.

At present the school has sufficient water to supply its necessities. This condition, as will hereinafter be shown, will continue until August, especially since the school will require still less water during July and August due to depleted population. Consequently future actions need not be hurried particularly because of the seriousness of the general situation.

(b) Past History

The first complaint regarding water supply was received in 1931, three years after construction of the school. It was then decided to provide a sure and visible supply of water, although an admittedly small one, by developing a spring nine hundred feet south-east of the school. This was completed in May 1932 and acted as auxiliary to the well under the boiler room of the school which was originally intended to provide all of the necessities of the school. The spring has done all that was expected of it.

As outlined in the enclosed copy of a report dated May 4, 1934, the well has never performed its full duty since it was constructed. Of course it provided sufficient water for construction of the building but the provision of 5000 gallons per day for years to come was another matter.

The final report on development of the spring dated June 1, 1932, describes all conditions as on that date, as does also one dated February 6, 1934, in which a new well at a cost of \$1378.12 is considered.

Indian Affairs. (RC 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The next development was receipt of a letter dated March 12, 1934, from the Director, requesting another inspection of the well. It was then decided to clean the well. This operation was completed on May 3, 1934.

It is to be understood that since the well was first drilled, in 1928, it has never yielded the supply expected or hoped from it. The last improvement, in 1934, only lasted a few weeks.

A new complaint dated March 27, 1937, has now been received from the Controller concerning the well, containing a suggestion that the well be again cleaned if considered feasible, before considering the construction of a new well.

(c) Present Condition of Well & Spring.

For the past three years, practically ever since the well was cleaned in 1934, the school has had an entirely inadequate supply of water. As will be noted from the report dated May 4, 1934, very little dirt was removed at the last cleaning. Consequently the renovation did not seem to be of much use in increasing the flow. Evidence presented in this present report corroborates this opinion.

During the last few years the spring and well both increase their flow each year about May first, in fact to a sufficient amount to supply the school. This continues until August in varying degrees. For instance, almost exactly four days after a heavy thaw or a heavy rain both well and spring increase in flow to quite an appreciable extent. This last condition lasts for a short while until both sources again lower in yield but not to an insufficient amount. In August the flow definitely lowers to an absolutely ridiculous amount considering the necessities of the school.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

(d) Particulars as to use of water by the School.

To capitulate, sufficient water is available from May to August, when the necessities are least. In August the supply diminishes almost to the vanishing point. During the past winter from September to April, for instance, the stock, which has been reduced from nearly 100 head to 30 head for this very reason, were watered once per week. During the remainder of each week they ate snow. During the day on which the stock was watered the school had no supply whatever.

It naturally follows that if the well fails, no water is available for both stock and school together as the spring will not supply both. Incidentally it might be mentioned that the spring on the average supplies possibly 1000 to 1200 gallons per day. The wants of the whole school would be 5000 gallons per day or more.

Again, on wash day, no water is available for anything else whatever. From September to April the children are bathed less than once per month. The clothes are successively washed in the same water until it becomes too filthy to be used. No water is available for flushing the toilets except at impossible intervals. An explosion occurred in the septic tank a short time ago due to the accumulation of gas, the contents being in a solid form instead of liquid. This tank is about 60 feet from the school. The gas took fire probably by electric spark and the flame leapt 15 feet into the air, bringing all of the Indians within sight to the School, thinking it was on fire.

During this season no water is available in case of fire, ~~xxx~~ i.e. for the most important and largest portion of the year. The two pumps are activating most of the

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

day pumping air and a little water, not because of inefficiency but because the water is not in the well or spring in sufficient quantities. Father Ruaux states that he is spending \$80 to \$100 per month for water, mostly because he has to pump so much air.

Before April the spring supplies sufficient water for the school proper. The stock obtains water from the small dammed pond below the spring. When the lake goes dry in the fall the spring cannot supply all, until the thaw in the spring. It will be noted that nothing is mentioned regarding the well. This, however, quits in August and resumes a small flow about April 20. There are no sloughs or lakes in this general area.

There is a real danger of typhoid epidemic as the toilets are so infrequently flushed and the children are bathed and their clothes washed so seldom. The explosion in the septic tank is significant external evidence of conditions.

The Principal stated that, in order to protect himself, he would be compelled to call in the Minister of Health of the Alberta Government who would likely take steps to close the school until conditions are remedied. It is apparent that action such as this would be disastrous.

3. Obvious Remedies.

The writer hesitates to approach this matter in the way which he feels it should be, and is satisfied that it must, ultimately, be considered. However, he feels that some one must take the responsibility of at least introducing the subject of the only final remedy. Before discussing this drastic solution the matter of cleaning or duplicating the present well will be considered. As

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

sufficient water is being produced for ordinary purposes at present, and as vacation time is approaching, when the wants as regards water will be lessened, plenty of time is available for a full consideration of the problem. It must be remembered that the writer has to obtain some of the evidence from other, but reliable persons. The writer does not didactically state that the ultimate remedy proposed is the only one, but places it in this report as a basis on which to begin, after giving all of the facts in his possession together with his deductions and ideas.

(a) Clean out present well.

The well was "cleaned out" in 1934 but as far as could be ascertained practically no foreign matter was removed in the process. No other change was made in the apparatus of the well. In the long run no change occurred in production except for a short time after cleaning. It is now very similar in activity as before cleaning. The letter from the Controller dated March 27, 1937, authorizes the writer to clean it again without further reference to Ottawa.

Even this privilege the writer hesitates to use until this report has been considered, as he wonders if it will do any good. If the water is not there, no amount of cleaning will produce it. The evidence points to the fact that when water appears in the well (which is 300 feet deep) the pump puts it into the tanks. A shallower or deeper vein might be found but this requires experimenting. However, as before mentioned, 4 days after a thaw or a

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

heavy rain there is plenty of water in the well and everything is favourable. This gradually decreases for a few days until it reaches a very low ebb indeed, which condition continues until the next rain. The source of the well water must be in a surface soil far enough away that 4 days are occupied in finding its way to the well and spring.

It would appear that the paucity of rain of the last six or seven years has depleted the ground-water to such an extent that the well is of no use. The supply in the river itself may have some effect. Further evidence would indicate that it (the well) never fulfilled its destined purpose.

(b) Rehabilitate the Spring.

The spring appears to be affected by drought similarly to the well. It was already known before development by experiment that it varied in yield. The writer obtained as high as 1700 gallons per day in trials. It has been shown since that the yield from September to April lessens considerably. ~~in yield~~. There is no method of increasing this yield by further development. Consequently no change can be made in the spring. There were 6 feet of water in the spring at the time of the writer's visit.

(c) Drilling of a new well.

If the conclusions regarding depletion of ground water be correct there would appear to be no improvement in the drilling of a new well near the old one. The most economical location would be within a few feet of the old one and just outside the machinery room in order that the machinery could be housed in an extension of the machine-room most convenient for economical construction, access, heating, delivery of water, etc. But, if the above hypotheses be correct as regards depletion of ground water and present

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

efficiency of the present deep well pumping plant in itself one cannot see the use of sinking a new well near it. Of course, a new well could be sunk to a deeper vein if one were existent.

It has been stated that a "water -witch" lives at Pincher Creek 15 miles west of Brockett who has offered to locate a well for \$100. No doubt he or any one else could locate water in this area but of unknown depth or volume. One of the Sisters of the institution is said to be able to locate the crossing of two veins up hill and 300 or 400 feet southeast and uphill from the spring, (which is 900 feet east by south of the school) by oscillation of a watch hung on its chain. If this be so one stream is probably that which feeds the spring. The other vein lies north-east and south-west. However, if present its volume and depth is unknown.

This all might be quite true since it is known that water lies under this area but the question is "just how much experimenting should be done in seeking a well with permanent adequate supply? A new well, if drilled, apart from the school, would need a pump house, separate deep well pump, casing, rods, heating apparatus, and a 9' trench to the school for a pipe line unless the mechanical portion of the present plant is used. The total cost would depend on the length of pipe line and might total \$2000 or more, (an accurate estimate is not needed at this stage). Even then the purpose of the new well might not be served, as the water might not be there in sufficient quantities. At present one would not know just where to drill a well to be sure of success.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

In a word, it would be real experimenting to sink a new well, and the writer is quite ready to either spend \$100 or so on cleaning the present well or to go ahead and drill a new one.

This present report is an endeavour to place all facts and probabilities before the Indian authorities for consideration, as, under present circumstances, there is no immediate hurry for a decision. Incidentally they will have on file blue prints and photographs sent with the original report dated May 26, 1931.

4. Possible Permanent Remedy

A permanent solution of the difficulties is now about to be discussed. At this stage the writer will not propose it because of its radical nature, but will consider all sides and angles of the proposal.

(a) Location of Present School

The school is located on the side of a ridge on a small plateau 100 feet or so below the top. It is 15 miles west of Macleod and 5 or 6 miles south of the Oldman river. It lies 3 miles south of the Crows Nest Trail to B.C. The estimated elevation above the river bed is about 300 feet. (The bottom of the present well would therefore be about the level of the river bed. This is only an estimate by eye observation).

(b) Conditions

The Peigan Reserve had a population of 300 Indians at the time the school was built, in 1928. It has now a population of 500 and is increasing at the rate of 25 per year.

The school has a present population of 56. There are 50 children on the reserve unprovided for. A total of

Indian Affairs. (HC 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

125 children need school facilities.

The building is of frame construction. Veneering was intended, it is understood, but was never done. In the high winds prevalent in this locality the building vibrates sufficiently to move the water in the basins.

The school has to be self-contained owing to its isolation and distance from the highway.

The wind destroys the crops. A field was sown to 200-lbs. clover seed this spring and is now all blown out and will have to be reseeded. The other fields are in the same condition.

The lighting and power system will have to be renewed at an early date as it is rapidly deteriorating but, of course, the insecurity of the water situation is the most difficult to deal with.

Power lines are located along the highway three miles to the north.

The present building is said to be very cold in winter.

Some of the facts noted above are from personal observation. Others are "second-hand".

(c) Proposals.

In short, the proposal set forth for discussion is to move the buildings to the river. The main building could be torn down and rebuilt at the river, cheaply.

The water shortage would then be permanently solved and the authorities would have better facilities for power, farming, access to roads, etc.

Several good sites are available as noted by the writer in a superficial examination on May 18.

The writer is perfectly aware of the possible

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

complications in this kind of proposal when considering the fact that another Church has a school at Brockett. This school is said to have about 45 Indian children. This situation may have the effect of invalidating the whole proposal.

The principal stated that he did not see how he could carry on under present conditions as to water supply.

5. Conclusion.

The writer, as stated before, is ready to clean the well, or drill a new one. In case of the latter, the location would be a matter of opinion.

The radical proposal contained in Par.4(c) is another matter altogether and is set forth in great hesitancy.

Of course, a series of wet years might change the situation entirely, although the behaviour of the well since 1928 does not give much encouragement to this hope.

Although the statement was made before in this report that there is no necessity for haste at present still, it would be best not to delay consideration too long as, if a new well is decided upon, it should be ready before September. The cleaning of the present well is a very simple matter and would occupy a few days only.

Because of the importance of the question it has been dealt with in considerable detail perhaps unnecessarily so in order that the authorities may be able to understand the writer's ideas on the subject. He does not pretend to think he has said the last word on the subject. His personal

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

12.

opinion, however, is that under present conditions there will always be trouble as regards the water situation.

Prospecting for a shallow well for a farm house is one matter, usually easily solved; but looking for the location for a deep well to serve an institution like this, is another matter entirely. Experimental costs run high because of the nature of the plant itself including housing, mechanical portion, 9' trench, etc.; and one hesitates before embarking on it. Water, like gold, is where you find it, and looking for it in sufficient quantities under present conditions is still more difficult.

The reactions of the officials of the Indian Department towards this report will be awaited with interest.

ENGINEERING BRANCH

June 21, 1937.

Memorandum:

Mr. T.R.L. MacInnes,
Acting Director, Indian Affairs.

I am enclosing herewith a memorandum submitted by Mr. Mills, Chief Engineer of our Engineering and Construction Service, with which he encloses a report from Mr. P.A. Fetterly covering the water supply situation at the Sacred Heart Indian Residential School, Brocket, Alberta.

You will note from the reports that the water supply from the existing well is inadequate and will always be so under normal precipitation conditions. The alternatives are either sinking a deep well at an estimated cost of some \$1,378 and which might be greatly exceeded before a satisfactory water supply was secured, or moving the school to a location near the river. The adoption of the latter proposal, and which would afford a permanent solution from the water supply viewpoint, is of course one of policy. If the Indian Affairs Branch wish to seriously consider this alternative, we will obtain for you an estimate of cost of moving the school.

Will you kindly let me have your reactions to Mr. Fetterly's report.

Director.

Mr. Hoey.

Memorandum:

Regarding the Sacred Heart School on the Peigan Indian Reserve I have read Mr. Fetterly's report regarding the trouble they are experiencing in getting water. I have also read the memoranda from Mr. Wardle and Mr. Mills.

In the first place I wish to point out that when this school was built there was ample water in the well, which the report of Mr. E. Gardner Smith, who was the building inspector at the time, will show, copy of which report is on file here. I know that a real test was made of the well before the building was erected. The first I heard of any water shortage at this school was in 1930. At that time they were drawing the pipes out of the well to put in a new cylinder. When the pipes were raised to about one length from the bottom the chain broke and the pipes went down to the bottom with quite a force as you will readily understand as they were about 300 feet in length. Since that time the well has not been functioning properly. Whether this has anything to do with the shortage of water or not I am not in a position to say, I only wish to draw your attention to this point.

What I would now suggest is this. There is an Indian living just a short distance west of the school by the name of Neil Yellow Wings. He has a well at his place, also a spring in which I know at times there is plenty of water. I would suggest that Mr. Fetterly be requested to examine the well there and also the possibilities in regard to the spring. This would give some idea as to the amount of water in the vicinity and it might be possible to put in a reservoir at Neil Yellow Wings' spring and water the cattle and horses belonging to the school there, which would be quite a factor as only a short time ago the school had about 100 head of cattle and horses using the water from the well and spring at the school. By cleaning the well at the school and with the dam at the spring there might be sufficient water for the use of the school.

I would also suggest having Mr. Fetterly question Father Lavergne regarding a spring higher up in the hill above the school. There was one there at one time, but of course it may have dried up. Father Lavergne, as you know, was Principal of the Sacred Heart School for quite a number of years, but is now at St. Mary's School on the Blood Reserve.

-2-

The drilling of another well at the school should be considered in the event of all other plans failing, as to my mind the moving of the school to the river is absolutely out of the question.

The present school is a three storey building with a basement, of frame construction, lathed and plastered, with a flat roof. There is also a large barn at the school, with a hip roof, concrete foundation and floor, built of frame construction. There are also other buildings too numerous to mention such as chicken coops, implement shed, shop, etc. The cost of taking these buildings down and hauling the material to the river and rebuilding would be enormous.

Ottawa, July 2, 1937.

Memorandum:

Mr. J. M. Wardle,
 Surveys and Engineering Branch,
 Dept. of Mines & Resources.

I have, for acknowledgment, your memorandum of June 21st and also report submitted to you by Mr. Mills, Chief Engineer of your Engineering and Construction Service, and from Mr. P. A. Fetterly, Assistant Hydraulic Engineer - covering the water supply situation at the Sacred Heart Indian Residential School, Brocket, Alberta.

I may state, by way of comment, that these reports have been submitted to Mr. Christianson, General Superintendent of Agencies, for his consideration. Mr. Christianson was, until a few weeks ago, Inspector of Indian Agencies for the province of Alberta and is familiar with conditions at the Sacred Heart School. Mr. Christianson, in his reply, states:-

"The first I heard of any water shortage at the Sacred Heart School was in 1930. At that time they were drawing the pipes out of the well to put in a new cylinder. When the pipes were raised to about one length from the bottom, the chain broke and the pipes went down to the bottom with quite a force, as you will readily understand. The pipes were about 300 feet in length. Since that time the well has not been functioning properly. Whether this has anything to do with the shortage of water or not, I am not in a position to say. I only wish to draw your attention to this point.

"What I would now suggest is this: There is an Indian living just a short distance west of the

- school

school, by the name of Neil Yellow Wings. He has a well at his place, also a spring in which I know at times there is plenty of water. I would suggest that Mr. Fetterly be requested to examine the well there and also the possibilities in regard to the spring. This would give some idea as to the amount of water in the vicinity and it might be possible to put in a reservoir at Neil Yellow Wings' spring and water the cattle and horses belonging to the school there. This would be quite a factor, as only a short time ago this school had about 100 head of cattle and horses using the water from the well and spring at the school. By cleaning the well at the school and with the dam at the spring, there might be sufficient water for the use of the school.

"I would also suggest having Mr. Fetterly question Father Lavergne regarding a spring higher up in the hill above the school. There was a spring there at one time, but, of course, it may have dried up. The drilling of another well at the school should be considered in the event of all other plans failing, as, to my mind, the moving of the school to the river is altogether out of the question.

"The present school is a three storey building with a basement, of frame construction, lathed and plastered, with a flat roof. There is also a large barn at the school, with a hip roof, concrete foundation and floor, built of frame construction. There are also other buildings too numerous to mention, such as chicken coops, implement shed, shop, etc. The cost of taking these buildings down and hauling the material to the river and rebuilding would be enormous."

In view of the steadily multiplying demands upon the Department for the construction of Indian residential schools and the repair of others, it is not at all likely that we could obtain the money necessary to move the Sacred Heart School at any time in the immediate future. I am anxious, therefore, that you should ask Mr. Fetterly

- to make

to make another investigation, with the comments made by Mr. Christianson at his disposal. If the removal of the school is considered impracticable or too costly or if, on the other hand, the supply of water is limited, we may have to seriously consider a reduction of the enrolment at the school and perhaps the construction of a day school on another section of the reserve.

PB

Calgary, June 29th, 1937.

Sir:

I beg to enclose herewith copy of a communication received from Mr. H. C. Lancaster, Indian Agent, Peigan Agency, Brocket P. O. re condition of the fire extinguishers at both Residential Schools on the reserve.

This matter was brought to my attention by the Principal when I visited the R. C. (Sacred Heart) School on the 18th instant. After taking two of the quart size (guns) apart, they were found to be useless; The pumping apparatus inside the brass container being badly corroded, brittle and eaten through by the acid. In one case the brass container (outside shell) was perforated, had leaked, and crumbled under the pressure of my thumb.

I instructed Agent Lancaster to check those at the C. of E. (St. Cyprian's School), and if they were in bad repair to requisition direct to the Department for new ones.

I strongly recommend that these extinguishers be renewed and would ask that the matter be taken up direct with the Agent, Mr. Lancaster.

The Secretary,
Indian Affairs Branch,
Dept. of Mines & Resources,

RECORDS

Sir:

Re Lister-Bruston gas engines in use for lighting and pumping at both the St. Cyprian (C.E.) and Sacred Heart (R.C.) Indian Residential Schools, Peigan Agency:

Mr. H. C. Lancaster, Indian Agent, reports both these engines require overhauling. Both engines were overhauled at the schools in August, 1935, by the Bruce Robinson Electric Co., of Calgary, Agents for the Lister Bruston Co. I understand a thorough job was not done at that time through not having on hand at the reserve certain parts which it was found should be changed (renewed).

My recommendation is that both engines be brought to the Bruce Robinson Electric Company's shop here in Calgary, and thoroughly overhauled, this work to be done early in August, while the pupils are away on vacation.

I have asked the Bruce Robinson Co. to write Mr. Agent Lancaster, giving him a detailed list of what parts should be renewed, work to be done, and the approximate cost; and have instructed Agent Lancaster to take the matter up with the Department direct.

Your obedient servant,

C. Pant. Schmidt,

Ottawa, July 28th, 1937.

Dear Sir:

The Department is in receipt of your letter of the 19th instant, in which you report that the engines at the St. Cyprian and Sacred Heart Indian Residential Schools are in bad condition and require considerable repair.

You may have these engines put in good condition at as reasonable a cost as possible. The work should, of course, be done by a firm on the approved list. Please let me know as soon as you can the cost of this work, as we intend to take the amount from that provided in the current year's appropriation for these schools.

Until we know what the cost of repairing these machines will be, the Department will be unable to authorize any further expenditure for repairs and improvements at the two schools mentioned above.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

EX'D.

Ottawa, July 28th, 1937.

Dear Sir:

With reference to your letter of the 20th instant, the Department received the report prepared by Mr. Hoover and Mr. Fetterly regarding the water situation at the Sacred Heart Indian Residential School.

Possibly you have seen a copy of this report, but, if not, I may say that the two alternatives suggested were, either to sink a deep well, at an estimated cost of \$1,738.00 - which amount might be greatly exceeded before a satisfactory water supply was secured - or move the school to a location near the river. The latter alternative was, of course, considered impossible and, therefore, we requested Mr. Fetterly to make another investigation. To assist him in this regard, we forwarded a memorandum prepared by Mr. Christianson, a copy of which is enclosed.

Yours truly,

R. A. Hoey

Memorandum:

Mr. Mills.

Upon receipt of a copy of a telegram sent you by Engineer Hoover of Calgary regarding the difference in elevation, taken from a map of the Peigan Indian Reserve in Alberta, between the level of the Oldman River and the ground at the present artesian well, namely, one hundred and sixty-five feet; I beg to advise that I communicated with Mr. Johnston, Chief Engineer, Water Supply and Boring Section, Department of Mines and Resources, as suggested by District Engineer Stinson, giving him the above mentioned information.

I informed him of the depth of the present well, which does not supply a sufficient quantity of water. He advised me, if possible, to make a trial of either cleaning or deepening the present well; or, to drill another well near the building as deep as the level of the river. If water is not found at about two hundred feet, boring should be discontinued as it would seem doubtful that water be obtained at a greater depth.

Engineer.

Re- Wind Damage to R.C. School, Brocket, Alta.

Sir:

Pursuant to your instructions, I visited the above school yesterday, and was received by the Rev. Principal, Rev. Father Ruau, who afforded me every facility for making my inspection.

I was accompanied by Mr. W.T. Scott, of Calgary, who has worked with me on a number of construction jobs for the Department, and has had wide experience in the building trade. Together we made a close examination of the damage resulting from the tremendous winds to which the school is exposed, and collaborated as to remedial measures necessary.

Briefly stated, the damage is entirely confined to the west end of the building, and may be described as a "bulging" of the wall outwards to a maximum extent of three inches, and extending from about the level of the ground floor to the level of the 2nd floor. There seemed no trouble below the ground floor, nor could I notice any disturbance along the line of roof plate. The pressure of the high winds against the narrow west frame wall, and with the recurring push and rebound, has caused this wall to bulge outwards, as stated. On the inside of said wall there has developed wide plaster cracks in the corners. It is a condition which may rapidly become worse when high winds recur, and measures should be taken promptly to strengthen the affected end of the building.

My recommendations for strengthening the west end of the structure are as follows:-

Remove the metal cornice along the line of ^{1st} partition plates adjoining the corridors of ~~1st~~ and 2nd floor ^{ceilings} for 10 feet in length from outside wall. Then place a bar of iron, $3/8"$ x $2"$ by 10' long, securely bolted to plates with $1/2"$ lag screws. The outer end of the iron bar to be round and threaded, and to extend through the outside wall and to receive a heavy plate 4 ft. in length. On the outside of said plate use a heavy washer, and double nuts. Two such plates, bars, etc., as described should be used on the ~~1st~~ floor, and two on the ~~2nd~~ floor. Then when the iron bars, plates, etc., are all securely attached, the nuts should be tightened, which should have the effect of drawing in the "bulge" to a considerable extent, if not altogether, and also prevent the same trouble happening again.

To further stiffen and strengthen the building, I recommend that a rod of round iron of $7/8"$ diameter by the width of the building (34') be placed across the building just under the ceiling of the ground floor, with plates and nuts on the outside walls at either end; and a similar rod, with attachments, be placed just under the ceiling of 1st floor. These rods should be placed, one directly above the other, just west of the front balcony. To facilitate handling, these long rods should be jointed in the centre by turnbuckles. Then by tightening the nuts at either end of these rods, the building would be held rigid at its vulnerable

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

CANADA

2.

west end where the heavy winds strike.

By drawing in the bulging wall at four different points, and by the further strengthening and stiffening of the building by the cross rods as described, the entire structure should become much more rigid than before, and further deterioration prevented. In addition, some renailing of the siding at the west end should be done where nails have worked loose, and the plaster cracks in the interior corners at the west end of the building should be restored.

Regarding the cost of the suggested work, it is difficult to give a close estimate. The required iron plates, rods, bars, etc, threaded and drilled as required, would cost about \$40.00, FOB Calgary. Then there would be a good deal of cutting and making good. An experienced mechanic and helper might require a week to complete the work in a thorough manner. Perhaps a complete estimate of \$150.00 might be cited as the probable cost, with an additional \$50.00 leeway for repairing plaster and contingencies.

As the type of work outlined is quite out of the ordinary run of carpentry, I deem it very important that a thoroughly competent and experienced man be employed. In this connection I would strongly recommend Mr. Scott. He is well and favorably known to the Department, and as he was with me during my inspection of the damage, he knows exactly what is required to be done, and is competent to do it. No doubt a suitable helper could be procured locally. I append Mr. Scott's address below.

All the foregoing is respectfully submitted.

Yours faithfully

E. Gardner-Smith

INSPECTOR OF INDIAN AGENCIES

406-11A.R.C.

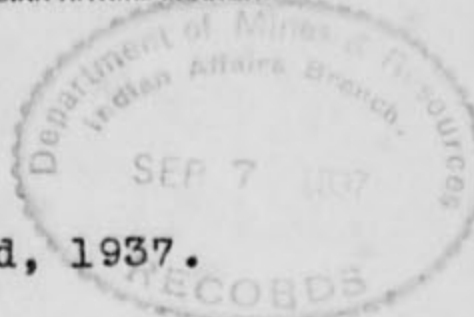

CANADA
DEPARTMENT
OF
MINES AND RESOURCES

PB

Calgary, September 2nd, 1937.

INDIAN AFFAIRS BRANCH

Sir:

I beg to report that when at Sacred Heart R. C. Indian Residential School, Peigan Agency, on the 10th ult., in company with Mr. M. Christianson, General Supt. of Indian Agencies, and Mr. H. C. Lancaster, Indian Agent, the Principal, Rev. Father Ruau, drew our attention to certain damage done to the West (end) wall of the main building by a wind storm which passed over the district a few days before.

After examining the building, it could be plainly seen that the centre of the wall had bulged out, where the studding plate had been cut to allow the placing of twin windows to provide light for the staircase well.

Mr. Christianson and I discussed the matter on our return to Calgary, and we decided it would be advisable to have a competent tradesman examine the building and make a report. I therefore asked Mr. E. Gardner-Smith, who was building inspector when the school was erected, to do so. I am attaching hereto Mr. Gardner-Smith's report, and would recommend that immediate steps be taken to have the building braced as suggested by him. In my opinion there is grave danger of serious and irreparable damage being done when another of these high winds, which are very frequent in the district, strikes this building. I might add that the members of the staff to whom I spoke were much concerned regarding the safety of the building.

I should be pleased to receive instructions on the matter.

Your obedient servant,

C. Pant. Schmidt
C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

EX'D.

O t t a w a, September 17, 1937.

Dear Sir:-

The Department is in receipt of a letter from Inspector Schmidt with reference to damage done to the West wall of the Sacred Heart School by a windstorm.

As Mr. E. Gardner-Smith was the Supervisor at the time of the construction of the Sacred Heart School, he was requested to examine the building and report what repairs he considered necessary.

His recommendations for strengthening the West end of the structure are as follows:-

" Remove the metal cornice along the line of partition plates adjoining the corridors of ground and 1st floor ceilings for 10 feet in length from outside wall. Then place a bar of iron $5/8"$ x $2"$ by 10' long, securely belted to plates with $1/2"$ lag screws. The outer end of the iron bar to be round and threaded, and to extend through the outside wall and to receive a heavy plate 4 ft. in length. On the outside of said plate use a heavy washer, and double nuts. Two such plates, bars, etc., as described should be used on the ground floor, and two on the 1st floor. Then when the iron bars, plates, etc. are all securely attached, the nuts should be tightened, which should have the effect of drawing in the "bulge" to a considerable extent, if not altogether, and also prevent the same trouble happening again.

" To further stiffen and strengthen the building, I recommend that a rod of round iron of $7/8"$ diameter by the width of the building (34') be placed across the building just under the ceiling of the ground floor, with plates and nuts on the outside walls at either end; and a similar rod, with attachments, be placed just under the ceiling of 1st floor. These rods should be placed, one directly above the other, just west of the front balcony. To facilitate handling, these long rods should be jointed in the centre by turnbuckles. Then by tightening the nuts at either end of these rods, the building would be held rigid at its vulnerable west end where the heavy winds strike.

" By drawing in the bulging wall at four different points, and by the further strengthening and stiffening of the building by the cross rods as described, the entire structure should become much more rigid than before, and further deterioration prevented. In addition,

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

"some remailing of the siding at the west end should be done where nails have worked loose, and the plaster cracks in the interior corners at the west end of the building should be restored.

" Regarding the cost of the suggested work, it is difficult to give a close estimate. The required iron plates, rods, bars, etc., threaded and drilled as required, would cost about \$40.00, FOB Calgary. Then there would be a good deal of cutting and making good. An experienced mechanic and helper might require a week to complete the work in a thorough manner. Perhaps a complete estimate of \$150.00 might be cited as the probable cost, with an additional \$50.00 leeway for repairing plaster and contingencies."

You will note from the above that Mr. Smith estimates the cost will not exceed \$200.00. You may proceed with this work at once and engage the services of Mr. S. Fraser, of Pincher Creek, who was employed last year in the erection of the agency office. If his services are not available, you should consult Mr. F.O. McKenna, of Pincher Creek. Any material required should be secured from firms under the approved list.

Yours truly,

R.A. Hoey,
Supt. of Welfare & Training.

September 21, 1937.

Memorandum:

Dr. McGill.

Re - Water Supply, Sacred Heart
Indian Residential School,
Brocket, Alberta.

You will recall that the report of Mr. P.A. Fetterly of the Calgary Office of our Dominion Water and Power Bureau on the above matter, and which was I think concurred in by officers of your Branch, recommended the drilling of a new well a few feet south of the present well at a total estimated cost of \$1,673.29.

Further consideration has been given to this matter and it is our view that no definite assurance can be given that there will be any greater water available from another well in the immediate vicinity. It also appears that the existing well, which served satisfactorily in years of normal precipitation, should be given every opportunity to function. It further appears that this well will give a sufficient supply of water as soon as more rainfall occurs in the vicinity.

Consequently, our senior engineering officers feel that the proper course is to clean out the existing well and deepen it to the extent that is practicable, rather than embark on an expenditure for a new well to the amount indicated. Under the circumstances, this is the course that is being followed and action will be taken immediately.

Director.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

EX'D.

MEMORANDUM;

Mr. J.M. Wardle,
Director of Surveys & Engineering

I have your memorandum of the 21st instant with reference to the water supply at the Sacred Heart Residential School, Brocket, Alberta.

With reference to the first paragraph, I may say that while Mr. Fetterly recommended the drilling of a new well, there is no record on our file of any officials of this branch concurring in that recommendation.

We note that you consider the proper course to follow is to clean out the existing well and deepen it to the extent that is practicable. This should be done at once, but it is expected, of course, that the cost will be kept as low as possible.

Howes

Memorandum:

Dr. McGill.

Re - Water supply, Sacred Heart School,
Brocket, Alberta.

In accordance with instructions issued, the well supplying water for the above school has been cleaned out and deepened. The well was cleaned of 25 feet of cave-in or sediment at the bottom and then deepened by the drilling of a 30-foot new hole in gray shale. The present equipment was repaired.

Results were disappointing as tests made before and after work was done did not disclose any increase in water supply after the work was completed. Tests, however, did disclose that the maximum supply of water from the well can be obtained by pumping for 40 or 45 minutes at four equally spaced periods per day. It is apparently a waste of time to pump longer than 40 or 45 minutes at any one time. At the present time the water level is 240 feet below the top of the well. The measured capacity of the well is 600 gallons per day which of course is insufficient.

Our engineers recommend that for the present the matter be left in abeyance to see if there will be any increase in the flow of water in the next three or four weeks.

It is the consensus of opinion that it would not be advisable to drill a new well in the vicinity

- 2 -

of the present well and of course a new well located at a distance away from the School would be costly in view of the separate well house, electrical connections, heating trench, pipe, etc. that would be required.

Instructions are being issued for a further measurement of the water supply in about three weeks' time.

Mr. Phelan,-

I am advised by Mr. Bateman of the Engineering and Construction Service that the amount of \$222.50 should be transferred or rather advanced to his branch for the work on the water supply at the Sacred Heart School.

You will recall taking Fetterly's travelling expense accounts off the file the other day, these I forwarded to Mr. Bateman, and I understand they will be paid from the above advance.

Will you arrange for the advance to the Engineering and Construction Service as I believe they are holding some accounts for payment?

MR. WARDLE

RE: Water Supply
Sacred Heart Residential School,
Brocket, Alta.

I enclose, for your information, copies of
telegrams received today in connection with the above.

In the last paragraph of your memorandum
of November 5, 1937 you stated that instructions were
being issued for a further measurement of the water
supply of the school about the end of November. I
have not received any report from you regarding what
action your engineers took at that time.

In view of the telegrams that have just
been received I would appreciate if you would arrange
to have your engineers visit this school immediately
and report what they consider could be done.

R

Indian Agency, Brocket, Alta.

February 1st. 1938.

Sir:

Further to my telegram of the 1st inst re shortage of water at the Roman Catholic School on this reserve, I beg to say the old well is useless as a water supply, and the only source at present is from the spring, which is getting very low, the pump is situate at the school end of the 500 yd 3 inch pipe line, and at times this line fills with air, and in that case it takes as much as three hours to prime the pump, get the air out of the pipe line and water to the school.

This you know, as well as being very inconvenient, increases the fire hazard at the school.

I understand a new location has been chosen for a well, and would strongly urge that work be commenced at once, so that a further supply of water may be secured at the earliest possible moment.

I have the honour to be,

Sir,

Your obedient servant,

MEMORANDUM

Calgary, February 1st, 1938.

Received a long-distance phone call from Rev. Father A. Ruau, Principal Sacred Heart Indian Residential School, Peigan Agency, Brocket, who says: "Our water supply is diminishing rapidly. If it continues to do so at the rate it has been for the past few days, we will soon be out of water. Our supply comes from the spring. The pond (reservoir) is about dry. Thought it advisable to let you know."

I then told Father Ruau to phone Agent Lancaster at once; ask him to look over the situation and report to Department at once by wire.

.

February 1st, 1938.

Phoned H. C. Lancaster, Indian Agent, Brocket, Alta., as follows: "Principal of Sacred Heart School reports the water supply diminishing rapidly. Please investigate and if necessary wire Department at once. Confirm your wire by writing full and detailed report at once, sending copies to this office."

Re - Water supply, Sacred Heart School,
Brockton, Alberta.

I have your memorandum of the 4th instant, with enclosures, covering the situation in regard to providing an adequate water supply for the above School. This matter has been discussed with the Director of the Indian Affairs Branch and, under the circumstances, it is agreed that a new well should be drilled immediately at the point suggested by the inspecting engineer.

Will you kindly send out instructions by wire for well drilling operations to start immediately, subject of course to weather conditions permitting. Maughan Brothers, of Lethbridge, mentioned by Mr. Fetterly in his report can be asked to do this work at the price of \$1.40 per foot for drilling, provided this is regarded as reasonable for the district. Casing, well pipe and other material that is needed during actual drilling of the well will have to be purchased as an emergency from approved firms in the district. The drilling contractors would submit their charges in an account in the usual way and which would be certified by our Engineer.

The latter should also prepare a bill of material on which quotations could be called for on pumping equipment, supply pipe, etc. It would be proposed to have this material in order for immediate purchase if water is secured in the well.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

The Director of the Indian Affairs Branch understands that there is no guarantee of water being obtained and that the cost of drilling the well and of such casing, etc., as may be necessary during drilling operations is in the nature of an exploratory investment.

Our Engineer should be instructed to report to you by wire as to the result of the drilling operations.

It is of course understood that no trenching or other work will be undertaken unless water is obtained.

It is not proposed to use the windmill pumping equipment, provided the Engineer's estimate for the gasoline pump, etc., is confirmed when quotations are called for.

It is understood from Mr. Fetterly's report that the investment necessary in order to determine whether or not water will be available in the new well will be between \$600 and \$700, and the Director of the Indian Affairs Branch has advised me that he will try and make an amount available for drilling operations up to \$1,000, if required.

Jm Wardle
Director.

Memorandum:

Dr. McGill

Re: Water supply, Sacred
Heart School, Brocket, Alta.

I am informed by our Chief Engineer that Mr. Hoover has advised that Maughan Brothers had reported by telephone to the effect that drilling had been started on the 22nd ultimo, and that 65 feet of hole had been drilled by the 25th through sand-stone and shale.

Maughan Brothers had on hand 150 feet of 5 5/8" casing which they offered Mr. Hoover at a price of \$1.14 per foot. As the usual wholesale price to the Government for this casing, according to Mr. Hoover, is \$1.21 1/2 per foot, he instructed Maughan Brothers to use the casing they had on hand, thus avoiding the necessity of ordering more casing than might possibly be required if water was found sooner than expected. This arrangement of Mr. Hoover's with regard to casing is concurred in as, under the circumstances, it would appear to be the most satisfactory arrangement. Mr. Hoover further advises that Maughan Brothers informed him they can get more casing if needed, although whether it would be at the \$1.14 per foot is not stated.

Mr. Hoover has also supplied a requisition for material that will be required if water is obtained.

EX'D.

Sir,

Reporting on the sewage repair at the Sacred Heart Indian Residential School, I have discovered the following:-

Re. Voucher.
No. 257.

The pipes from the Kitchen & Laundry leading out to the main line sewer, were badly blocked up with deposits, caused partly by insufficient incline in the pipes & partly shortage of water in flushing. There is no plan of the sewage line at the school, therefore it was necessary to do more digging in order to locate the pipes outside of the building. I would suggest Blue Prints be obtained, and kept accessible in the Principal's office for reference under similar circumstances, also an outfit of cleaning tools be supplied to be used for the two schools, the staff could then do the work & keep costs down.

Re Voucher
No. 258.

This bill was incurred in renewing pipes in the superheating tank in the boiler room, in connection with the circulation of water for heating the radiators. The pipes were eaten through & leaking, and it was absolutely necessary that they be replaced.

I have the honour to be

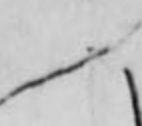

Sir,
Your obedient servant,

Dear Sir,-

A visit was made to the well at The
Sacred Heart School near Brocket as instructed
and the following information obtained.

Depth of well was found to be 350 feet.

Capacity of well 20 gallons per hour.

Water in well rises to 80 feet of surface
after standing.

Before leaving the driller was instructed
to pull the casing since the flow was too small to be
of any value.

Your obedient servant,

(sgd.) W.T. McFarlane.

Encl.

I am enclosing, herewith, accounts
in duplicate totalling \$663.76 incurred in
connection with the above school.

As we have not had money transferred
to us for this expenditure it is thought probable
that you will be able to pay these accounts from
funds you have available for 1937-38.

I might say that in a letter from
our Engineer he states:-

"It is also recommended that we sell
the 100 feet of casing for \$75.00.
If this transaction be consummated
immediately, this amount could be
deducted from the invoice price,
\$566.50, leaving a net payment to
J.P. Maughan of \$491.50."

INSPECTOR OF INDIAN AGENCIES

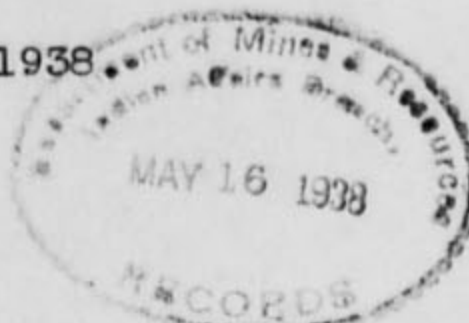

406-11A.R.C.

CANADA
DEPARTMENT
OF
MINES AND RESOURCES

INDIAN AFFAIRS BRANCH

Calgary, May 12th, 1938

Dear Doctor McGill:

I beg to report that on Saturday evening of April 23rd, while at the Peigan Agency, I made a short visit to the Sacred Heart R. C. School, together with Mr. T. W. V. Webb, Clerk-in-Charge of the Agency. I did not make an inspection, but discussed matters generally with Rev. A. Ruaux, the Principal, who stated that everything was going along nicely and no sickness amongst the pupils; BUT: The question of water supply was again to the fore!

As the Department know, the new well sunk this Spring was abandoned through lack of water and the casing taken out (salvaged). As it is, the supply of water is insufficient for proper flushing of toilets and bathing. The new well was sunk a distance of several hundred feet South from the buildings, on the slopes of a hill. I would be in favour of sinking another well a few feet from the original one, near the corner of the power room and laundry. A good supply of water was found when the original well was sunk; this later diminished. The reason for this I cannot ascertain as there seems to be conflicting theories, and I am satisfied no one knows the cause. One theory is that the casing was bent at the bottom, which prevented further drilling. Another is that the lower part of the casing fills with silt and cannot be cleaned. This might be the cause.

Mr. E. Gardner-Smith in his report dated Oct. 9th, 1931, states that the lower 60 feet of the casing was perforated; also, that the lower 60 feet is 5 inches in diameter, while the other (or top) of this is 5 5/8 inches. What effect this would have on the well, and how the two sizes of casing are joined together, I cannot say. Mr. Gardner-Smith, in his report, last paragraph, favours sinking a new well near the original one.

Your obedient servant,

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

Ottawa,
May 20, 1938.

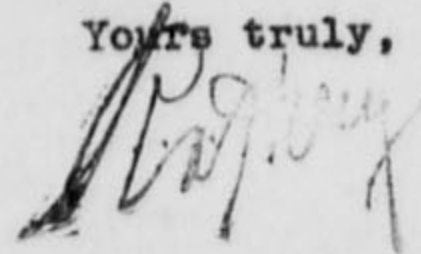

Dear Sir:

I am in receipt of your letter of the 12th instant with reference to the water situation at the Sacred Heart Indian Residential School. I am requesting the Surveys & Engineering Branch to have one of their engineers call on you and possibly both of you could visit the Sacred Heart School and decide what is the best course to be taken.

We have no funds specifically provided for another well at this school but we have a small unallotted balance from which we might be able to obtain the cost of a new well if this is absolutely necessary.

I realize that it is extremely difficult to be assured that water will be secured before starting operations but when visiting the school with the engineer you should consider the matter very carefully in order that he may report fully to us. If at all possible we wish to avoid the previous experience of spending considerable funds without obtaining water.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

C. P. Schmidt, Esq.,

Memorandum:

DIRECTOR

Surveys & Engineering Branch

Re: Well at Sacred Heart
Indian Residential School.

In your memorandum of April 6 you advised that instructions had been issued to pull the casing in the new well that had been dug at the Sacred Heart Residential School as the flow of water was insufficient.

Today I am in receipt of a report from Mr. C. P. Schmidt, Inspector of Indian Agencies, Calgary, which reads in part as follows:

"As the Department know, the new well sunk this Spring was abandoned through lack of water and the casing taken out (salvaged). As it is, the supply of water is insufficient for proper flushing of toilets and bathing. The new well was sunk a distance of several hundred feet South from the buildings, on the slopes of a hill. I would be in favour of sinking another well a few feet from the original one, near the corner of the power room and laundry. A good supply of water was found when the original well was sunk; this later diminished. The reason for this I cannot ascertain as there seems to be conflicting theories, and I am satisfied no one knows the cause. One theory is that the casing was bent at the bottom, which prevented further drilling. Another is that the lower part of the casing fills with silt and cannot be cleaned. This might be the cause.

-2-

"Mr. E. Gardner-Smith in his report dated Oct. 9th, 1931, states that the lower 60 feet of the casing was perforated; also, that the lower 60 feet is 5 inches in diameter, while the other (or top) of this is 5 5/8 inches. What effect this would have on the well, and how the two sizes of casing are joined together, I cannot say. Mr. Gardner-Smith, in his report, last paragraph, favours sinking a new well near the original one."

I would appreciate if you would arrange to have one of your engineers again interview Mr. Schmidt and possibly both of them could visit the Sacred Heart Residential School and a report could then be submitted to us.

We have no funds specially provided for another well at this school in the current year's appropriation but there is a small amount that is unallotted and if the school cannot possibly operate without having more water we will endeavour to provide the necessary funds.

I am in receipt of your memorandum of May 19 enclosing a copy of Salvage Minute No. 11126.

A new well was drilled at the Sacred Heart Residential School under the direction of the Surveys & Engineering Branch. In forwarding the account for the expenditure that Branch stated that there was 100 feet of casing that had not been used. They advised that the well driller was prepared to give \$75.00 for this casing and the Surveys & Engineering Branch recommended that this amount be deducted from his account.

The Salvage Officer was phoned and he stated that it would be in order to do this. Consequently, the amount of \$75.00 was deducted from the well driller's account and a cheque was forwarded to the Salvage Officer.

MEMORANDUM:

Mr. Wardle.

Re: Well at Sacred Heart Indian
Residential School.

I have your memorandum of the 26th instant with reference to the above and enclosing copy of a memorandum you received from the Director of the Indian Affairs Branch.

It is felt that all the points raised by Mr. Schmidt, Inspector of Indian Agencies, Calgary, in his letter to Dr. McGill, must have been known and taken into account by Mr. Hoover during recent more or less protracted efforts that have been made to secure water at this point. You will recall in this connection that only last fall the old well was cleaned out, but without any beneficial results as far as increase of water supply was concerned. I am, however, writing Mr. Hoover for his comments on Mr. Schmidt's letter, and upon receipt of his reply you will be further advised.

Respectfully submitted,

T.S. Mills

Sm. [Signature]
I am enclosing a copy of Salvage Minute No. 11126, of the 16th instant, in connection with the disposal of a quantity of old pipe to J.P. Maughan, of Lethbridge, Alberta, for the sum of \$75.00. It is understood that this old material came from the Sacred Heart Indian School at Brocket, Alberta.

With a copy of this memorandum a cheque for the sum of \$75.00 is being forwarded to the Chief Treasury Officer.

As this Minute is the first intimation on record here, would you kindly advise me regarding the details of this sale, such as the quantity of pipe considered surplus.

DEPARTMENT OF THE INTERIOR

Dominion Water Power and Hydrometric Bureau

Calgary, Alta., June 13, 1938.

Sacred Heart Indian School

Sir,-

Referring to your letter of 31st ultimo, your File I.A.1680-4, a conference was held in this office on even date between Messrs. R.A. Hoey of the Indian Affairs Branch, Ottawa; C.P. Schmidt, Inspector of Indian Agencies, Calgary; and P.A. Fetterly, of the Water and Power Bureau, Calgary; the subject being the possible construction of a new well at the above-named School.

It was unanimously decided to recommend the immediate drilling of a new well within a few feet of the original well near the Engine room as first recommended in the report dated August 31, 1937. The estimates will be found on page 4 of this report, the total cost being estimated at \$1675.29.

The committee certainly does not guarantee that water will be found at that, or any other depth, at this, or any other point, near the school.

The three points considered were near Yellowwings house 1500 feet South west of the school where a well exists with several feet of water; a location half-a-mile west of the School under the hill at another Indians 60 foot well. And the one near the engine room mentioned above. The first two would necessitate trenching and pipe.

It must be understood that at the best, this also will have to be considered as an exploratory well although the old well delivered a large supply at first. Whether the original well was defective because of the perforations at 60 feet of lower casing, or the hole was crooked or present lack of water is not known. The original hole cannot be very crooked or Mr. Maughan could not have deepened the original well a further 30' as he did last fall.

However, the Committee now recommend that a

2.

new well be drilled near the engine room as described above.

It is possible that the driller may ask 1.40 per foot for 300 feet and 1.65 per foot for the remainder.

All details of requirements appear to be shown on page 4 of the report of August 17, 1937.

Your obedient servant,

(sgd) O.H. Hoover.

June 24, 1938.

MEMORANDUM:

Mr. Wardle

Re: Well at Sacred Heart Indian
Residential School.

Encl.

Further to my memorandum of the 31st ultimo with reference to the above, a report has now been received from Mr. Hoover, copy of which is attached. It will be noted from Mr. Hoover's report that a conference was held in his office between Messrs. R.A. Hoey of the Indian Affairs Branch, Ottawa; C.P. Schmidt, Inspector of Indian Agencies, Calgary; and P.A. Fetterly representing Mr. Hoover. According to Mr. Hoover's report the unanimous decision was to recommend the immediate drilling of a new well within a few feet of the original well. The estimated cost of this work is \$1673.29, the breakdown of which is shown in Mr. Fetterly's report which accompanied our memorandum to you of September 13, 1937.

It will be noted that any work undertaken can only be considered as of an exploratory nature and no guarantee is given that water will be found at the point recommended or at any other point near the school. Under the circumstances there does not, however, appear to be any option other than to concur in the recommendation of the above mentioned committee providing the Indian Affairs Department, from their knowledge of the situation, considers it necessary to have an increased water supply at this point, and further can make provision for the required funds.

Respectfully submitted,

T. S. Mills

Memorandum:

DEPUTY MINISTER:

Re: Sacred Heart Indian Residential School,
Peigan Indian Agency, Alberta,
Electoral District of Macleod.

The lack of water at the above school has become so serious that the Surveys and Engineering Branch were requested some weeks ago to have one of their engineers make an exhaustive survey with a view to determining the best procedure to follow.

I am now advised by the Director of the Surveys and Engineering Branch that Mr. O. H. Hoover, engineer in charge at Calgary, recently visited the Peigan reserve and surveyed the situation very carefully. Later, he held a conference in Calgary with Mr. R. A. Hoey, Superintendent of Welfare and Training, and Mr. Schmidt, Inspector of Indian Agencies. It was the unanimous decision of this meeting that it is necessary to dig a new well.

The Surveys and Engineering Branch estimate the cost of the well at \$1,673.29. Funds for the purpose are available in the appropriation for Indian Education, and I would appreciate receiving the approval of the Honourable the Minister to transfer this amount to the Surveys and Engineering Branch and to authorize them to proceed immediately with the digging of a new well.

EX'D.

Ottawa, Ontario,
July 6, 1938.

Dear Sir:

I am in receipt of your letter of the 26th ultimo enclosing requisitions covering material for painting the interior of the Sacred Heart Indian Residential School.

In preparing our estimates for the current fiscal year, it was only found possible to include an amount of \$800 for improvements and general repairs to Sacred Heart school during the fiscal year. We have already expended an amount of \$663.75 on repairs to the water system. Recent developments show that this expenditure was not sufficient, and it now appears that it will be necessary to dig a new well at a cost of approximately \$1700.

In view of the present set up of our appropriation, it will be extremely difficult for the Department to secure this extra amount, but we expect to be able to do so and hope that it will insure an adequate water supply.

However, in view of the extra expense that we will have to incur in this regard, it will not be possible to favourably consider supplying the paint requested in your letter.

Yours very truly,

Philip Phelan
Chief, Training Division

Memorandum:

DIRECTOR,

Surveys & Engineering Branch:

Re: Well at Sacred Heart Indian
Residential School.

On receipt of your memorandum of June 28th, in connection with the above, I wrote the Deputy Minister with a view to obtaining the authority of the Honourable the Minister for the expenditure mentioned in your memorandum. Today I am in receipt of the following reply:-

"Referring to your memorandum of the 4th instant in reference to the above matter, which was discussed by you with the Deputy Minister yesterday, approval is given to the drilling of this well, providing, of course, the necessary inquiries have been made from the Mines and Geology Branch as to the possibility of securing a satisfactory supply of water if the well is drilled."

I trust that you will be able to arrange for digging this well at an early date, and the amount of \$1,678.28 will be transferred to your Branch when requested by you

EXTRACT
ORIGINAL ON

112-1-5

Edmonton, 13 July, 1938.

Dear Sir:

I am writing to you on behalf of Rev. Father Routhier, our new Provincial, who replaced Father Langlois. Having been Provincial Procurator for the past two years, I have been in touch with our Indian schools and am more in condition to know their needs, for the present at least.

x x x

We have another proposal to make to you. The school at Brocket needs to be enlarged. Well we have at McLeod a school that has been abandoned by the Sep. S.D. This is a brick building 65 x 65 feet. We had a contractor from Lethbridge to look at the building. This contractor estimated that, after allowing for breakage, 100,000 bricks could be salvaged. He estimated the cut stone at 840 cubic feet. The windows, sashes, doors, and lumber are in good condition. This building belongs to the Oblate Fathers and we offer it free to the Department to be used for the addition at Brocket. You would have only the cost of salvaging the material and hauling them at Brocket which is only twenty two miles from McLeod.

Hoping these proposals will be taken into consideration by your department.

Yours very truly,

L. La Rose. O.M.I.
Prov. Proc.

EX'D.

116-2-5.

July 20, 1938.

Reverend Sir:

I desire to refer to that portion of your letter of the 13th instant in which you offer to allow this Department to demolish an old building, owned by the Oblate Order at Macleod, so that the material that is salvaged can be used for an addition to the Sacred Heart Indian Residential School.

No provision was made in our current year's appropriation for an expenditure of this nature and, under these circumstances, it is not possible to favourably consider your offer at the present time. I might add that we do not appear to have received any recent request for enlarging the Sacred Heart School.

For your information I may state that the water situation at the Sacred Heart School has been causing us considerable concern. Early in the year an amount was spent in an endeavour to improve the existing well but without success. Recently, authority has been given for the digging of a new well at an approximate cost of \$1,650. It is hoped that it will be found possible to obtain a plentiful supply of water.

Yours truly,

T. R. L. MacInnes,
Secretary.

Reverend L. LaRose, O.M.I.,

Memorandum:

Dr. McGill

Re: Well, Sacred Heart
Indian Residential School.

With reference to your memorandum of the 14th instant regarding the above, I should be pleased if you would take the necessary action to have transferred to the Engineering and Construction Service the sum of \$1,675.00 to cover this work.

As soon as the transfer of this money is effected immediate arrangements will be made for the digging of this well.

Director.

Memorandum:

REPRESENTATIVE OF THE TREASURY

Re: Sacred Heart Residential
School, Brocket, Alberta.

Please transfer from Vote 168 to the
Surveys & Engineering Branch an amount of \$ 1,675.00
for the drilling of a well at the above-mentioned
school.

The lack of water at the Sacred Heart
School has become so serious that the Surveys &
Engineering Branch were requested some weeks ago
to have one of their engineers make an exhaustive
survey and he reports that the only possible
solution is to drill a new well. The Honourable
the Minister has approved of this action.

Dear Sir:

With reference to your letter of the 26th ultimo regarding the water supply at the Sacred Heart Indian Residential School, the Surveys and Engineering Branch were requested on the 27th ultimo to proceed at once with the drilling of a new well.

The necessary funds for this purpose have also been transferred to the Surveys and Engineering Branch and it is therefore expected that work will start in the near future.

Yours truly,

Philip Phelan,

File 4919.

Interim Report

on

New Deep Well

at

Sacred Heart Indian School, Brocket, Alberta,

by P.A. FETTERLY
Assistant Hydraulic Engineer.

1. Purpose of Report.

Pursuant to instructions received from T.S. Mills, Esq., Chief Engineer, Surveys and Engineering Branch, Ottawa; the construction of a new well at the above-named school was begun on September 5. Advice having been received from the driller, Joe Maughan, on September 24th that the hole was drilled, the writer proceeded on September 26 to Brocket to test the yield. This report is an elaboration of the wire sent you on September 28.

2. Findings.

It was found that the well had been drilled at the proposed location 10' south of the old well to a depth of 295 feet. A small amount of water had been encountered at 70 ft. & 165 ft., and an apparently much larger amount at 245 ft. The amount entering between 245 feet and 295 feet is not known. The material to 70 feet is surface soil. The remainder is sandrock and shale.

After the rest over Sunday the well was found to contain 104 feet of water. The bailer was then started. During the first 20 minutes or so the water was lowered about 50 feet. The baling test was continued for a total of two hours and during the last hour and a half or more the water was lowered about three feet only.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

This would seem to indicate that the most of the water comes from about 245 feet to 250 feet. A total of 640 gallons of water was baled out in exactly two hours. The bailer has a capacity of 7 gallons, and 92 bails-full were extracted, an average of one bail per minute and eighteen seconds, or nearly 5 1/2 gallons per minute.

The use of the bailer is of course intermittent, not continuous, as would be the case with a pump. It was not considered advisable to continue the baling as a test.

Father Riaux, the Principal, mentioned that he had all of the water he needed at present from the old deep well together with the supply from the spring but was apprehensive that the supply would diminish to little or nothing by January and February as it has always done, and that then he would be in as great difficulties as ever. However there is a limit to speculation, consequently one has to take matters as they exist now, and not consider future conditions.

Mr. Maughan, the driller, then suggested that he rent a pump, pipe, rods, and test the yield in a more efficient manner. The cost of rental, plus work in freight-ing this rented equipment from Lethbridge (55 miles), installation, carrying on the test, etc. would amount to \$104.00.

Not wishing to decide this point without consideration, the writer then proceeded to Calgary for consultation regarding this proposed extra expenditure.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4.)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4.

3. Conclusion.

It is possible or even probable that the 245 ft. water vein has been present all the time but could not get into the casing of the old well and that is the reason for failure of the well to produce.

Incidentally, when the drill reached the 165 ft. depth the old well became muddied to such an extent that pumping of the water from the old well had to be stopped or the plumbing system would be plugged. Apparently the water was escaping from the new hole through fissures to the old well.

A further report will be made later.

Peigan Indian Agency, Brocket, Alta.
October, 10th. 1938.

Sir,

Re Letter No. 116-2-5 signed R.A. Hoey Esq:-

With reference to your letter of the 14th ultimo, giving authority to repair the roof at the Sacred Heart Indian Residential School on this Reserve, I have seen Mr D'Aoust again as it did not seem to be the correct quantities of material stated. The correct amount of material is as follows:-

50 gals.	
35 rolls of "Aquanox" roofing liquid @ \$1.00 per gallon	\$50.00
35 rolls of 3 ply roofing felt (Heavy) @ \$3.00 per roll	\$105.00
Allowance for Miscellaneous material. (Nails)	5.00
etc.	
Labour as quoted by Mr D'Aoust. of Pincher Creek.	\$60.00
Total cost.....	\$220.00

The material has been priced in Pincher Creek & Brocket, Messrs Bossenberry Bros of Brocket, have submitted the above quotations, if this is approved may I receive authority by wire to proceed with work as outlined, as the winter season is at hand.

I have the honour to be,

Sir,

New Well at Sacred Heart Indian School.

Sir,-

Having been advised by Mr. J.P. Maughan, driller, that he was ready to carry on a test of the yield of the new well, I instructed Mr. Fetterly to watch the test. He proceeded to Brocket on Monday, October 31. He reports as follows:

"Mr. Maughan began preparations about 1.00 p.m., on October 31, inserting the 3" pipe and the octagonal rods, both of which were originally in 20 foot sections, and attaching the well-drilling outfit for pumping. By 7.30 p.m. all was ready for the test.

Pumping of the new well began at 7.34 p.m. At the beginning it produced at the rate of 560 gallons per hour (full capacity due to emptying the casing). Pumping was continued at the rate of 23 strokes per minute, 18" stroke, 2 3/4" cylinder. At 7.52 p.m. the old pump was started, after having been idle for a time. It produced 260 gallons per hour at the beginning, with 36 strokes per min., 6" stroke, 2 3/4" cylinder, on the regular pump jack.

The two pumps were run together from 7.52 p.m. to 9.10 a.m. All yields are at the rate of gallons per minute.

At 2.00 a.m. the new well made 180 gallons per hour, and the old well made 225 gallons per hour.

At 8 a.m. the new well made 120 gallons while the old well made 150 gallons per hour.

The old well was shut off at 9.10 a.m. An attempt being now proposed to find out any interrelation, if any. The new well was continued.

At 10.30 a.m. the new well produced 170 gallons.

At 10.45 a.m. the old well was started (the new one still going) and produced 200 gallons per minute.

At 10.50 a.m. the new well produced 130 gallons with both working.

At 11.00 a.m. the old well produced 210 gallons with both working.

At 11.08 a.m. the new well was shut off.

At 11.13 a.m. with the new well shut off, the old well produced 250 gallons per hour.

At 11.28 a.m. with the new well still shut off the old well produced 215 gallons.

At 11.30 a.m. the old well was stopped and the new one started.

T.S. Mills, Esq.,
Chief Engr., Surveying and Engineering Branch,
Dept. of Mines and Resources,
Ottawa.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

At 2.10 p.m. the new well, working alone, produced 140 gallons.
At 3.00 p.m. the new well produced 145 gallons.

Pumping then ceased on the new well, the old one having stopped at 11.30 a.m.

It was considered inadvisable to carry on the test any longer as the cost of a thorough test such as this is \$2.00 per hour. Mr. Maughan stated that although he was working on the test with two other men continuously from 1.00 p.m. Monday to 3.30 p.m. Tuesday he would consider it as the usual 24 hour test.

On consent being given he began to dismantle the rig and also the pipes connecting the old well with the outside.

The 3" pipe and the rods were left in the well for the present. He stated that the pipes and rods could be pulled at any time and the casing could also probably be pulled if that decision were made within a few weeks.

He then moved the rig to Cowley where a job is insistently waiting.

A recapitulation of the testing activities follow:

The test having lasted about 20 continuous hours should give conclusive results."

At the end of the drilling proper, on Sept. 24, Mr. Fetterly proceeded to Brocket and measured the new hole. A baling test was made (See Report dated September 30) for 2 hours, which was the limit the driller wished to continue in this primitive and free method, and it was found that 640 gallons were baled out in two hours. The results of this test appeared to be conclusive to all concerned, that the well was a good producer.

It was mentioned in the report of September 30 that, as the preliminary, and apparently conclusive, test proved so favourable that certain material be purchased. It was also mentioned that Mr. Maughan would provide the necessary material to carry on a conclusive test. No reply being made to this suggestion, it was decided that the materials be ordered and used, first for a conclusive test and then for the final construction, as all concerned were convinced that the well was a producer and that the test would be made as of a formal nature only. The casing necessarily had to be ordered anyway while drilling was in operation. The 3" pipe and octagonal rods were obtained on Oct. 18.

I was surprised to receive a letter on Oct. 24 authorizing the expenditure of \$104.00 for Maughan's offer to supply certain material, as the matter of purchasing the material had been mentioned and not denied.

I will now return to the test of Oct. 31 - Nov. 1. All of the participants were greatly elated over preliminary results. From 7.30 p.m. to about 9.30 p.m. the two wells were producing over 600 gallons per hour. At about 10 p.m. the yield began to lessen slightly until, at 2 a.m. the total yield was down to 400 gallons, still a fair yield. However, by 8 a.m. it had lessened to 270 gallons and at 11 a.m. the total amount was 340 gallons, with both wells going. The old well was stopped at 11.08 a.m. owing to expense of running the school machinery. There seems to be some small relationship between the wells but the total continuous yield would seem at present to be in the vicinity of 350 gallons per hour. The clear water of the old well did not appear to be affected by the slightly muddy water of the new one.

It might be stated that by 3 p.m. all participants were considerably discouraged over the final results. Father Rioux, the Principal, claims that both spring and old well are producing all the water that is needed at present, but that in January and February, the yield in both will be disastrously lessened according to previous experience. He claims when Pincher Creek freezes up the source of supply for both well and spring will cease as the spring and well both increase in yield three days after a heavy rain or rising of the creek.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Father Rioux's last statement on Nov. 1st was to the effect that this new well is not producing the amount of water that the old well produces at present (this is proved by the enclosed table) and the old well goes dry in dry weather. Therefore, he is no better off than before in his opinion.

It might be mentioned that both working barrels and octagonal rods in the old well will not survive another extraction.

The possibility of activating both wells alternately was discussed with Father Rioux. In reply he stated that the school finances would not stand a battery of half a dozen pumps each producing a small amount of water. It would necessitate study of the flow of both wells and of the time each occupies in filling up. Unfortunately, after about one-half hour's pumping the old well begins to "suck" as it were and only produces a small amount. In other words, the casing more or less fills up during a rest and then is discharged by the pump in one-half hour or less. The new well acts much similarly. Using the wells alternately would be a considerable hardship to the school engineer.

Father Rioux claims that at present the gas for running the pump and automobile costs \$60.00 per month, of which over \$50 is for the pump.

The conclusion to be reached is that the problem of supplying the school with water is almost, but not quite, as far off as ever, although both pumps activating alternately would help the situation.

The final feeling of Father Rioux, Mr. Maughan, Mr. Pearson, the Pincher Creek plumber and Mr. Fetterly was one of discouragement.

We hesitate to make any further recommendations which might involve considerable expenditure in developing the new well which in all probability will prove to be a small producer in critical times.

It would appear however that by developing the second well, some additional water might be made available. Father Rioux is apparently averse to the development of this second well owing to added expense and work by the school engineer, and as the general cost to the Indian Department is a vital consideration we now prefer to leave the matter in the hands of a higher authority and to have definite instructions before making any move to develop this new well. In the former reports we declined to make any definite recommendations as to the drilling of further wells after the old well was unsuccessful cleaned out, although we made several suggestions.

Meanwhile, the matter will remain as at present.

Your obedient servant,

(sgd) O.H. Hoover.

Engineer-in-Charge.

I.A.1680-4

November 16, 1938.

MEMORANDUM:

Mr. Wardle.

Re: Well, Sacred Heart Indian School.

The question of shortage of water at the above school is a matter that has received the consideration of this Service since May, 1937. During the intervening period since the above date numerous investigations and subsequent reports have been carried out in the field by Mr. Hoover. These field inspections covered a considerable area around the school and also extended to a consideration of moving the present buildings to some area where water might be more easily obtained.

Actual new work carried out has consisted of cleaning out the old well, drilling a new well at a point about one thousand feet south of the school and last drilling another new well a few feet from the old well. None of these efforts have unfortunately been successful in so far as obtaining a sufficient supply of water is concerned.

Under date of the 5th instant a field report has been received from Mr. Hoover covering final tests run on the new well close to the old one, drilling of which was recently completed. A copy of this report is attached. This report is rather lengthy, but only one conclusion can be drawn from the information given, namely, that this last well has not been successful, and further that the problem of securing water for this school has not as yet been solved. In this connection Mr. Hoover states "the conclusion to be reached is that the problem of supplying the school with water is almost but not quite as far off as ever, although both pumps activating alternately would help the situation".

Mr. Hoover further advises "we hesitate to make any further recommendations which might involve considerable expenditure in developing the new well which in all probability will prove to be a small producer in critical times".

With regard to the matter of activating both wells alternately referred to in the above quotation from Mr. Hoover's letter, it will be noted that Father Rioux has advised Mr. Hoover that the new well is not producing the amount of water that the old well produces at present. Further, Father Rioux does not feel that the school finances would stand the expenditure involved in operating a number of gasoline pumps. In addition to the cost of

J.M. Wardle, Esq.,

-2-

operating, if both wells were used alternately, it would be necessary for the school engineer to give a lot of time to watching the pumping operations and switching from one well to the other as conditions necessitate. As regards cost, Father Rioux claims that at present the cost for running one pump is \$50.00 per month.

With regard to the drilling of this last well now under discussion, it will be recalled that last season the question of drilling a well close to the old one was under consideration, but ~~as~~ there seemed cause for doubt as to whether water might be expected in a well drilled close to a well which had failed in dry weather. The drilling of this well was only recently undertaken on the unanimous recommendation of Messrs. R.A. Hoey of the Indian Affairs Branch, Ottawa, C.P. Schmidt, Inspector of Indian Agencies, Calgary, and P.A. Fetterly of the Water and Power Bureau, Calgary, as a final experiment after all other possible sources of obtaining water had been unsuccessfully tried out.

It will be noted from Mr. Hoover's letter that under the circumstances, he does not feel in a position to make any recommendation as regards to what further action should be taken, the only suggestion offered by him being the development of the new well so that both wells could be operated. However, as he points out this will mean considerable annual cost to the Indian Affairs Branch for operation and is, therefore, apparently a matter for their decision. As none of the responsible parties who have been following this situation on the ground and are familiar with all conditions appear to have any further suggestions to offer, this office is not in a position to make a recommendation as to what should now be done. It might, however, be noted that a suggestion made some months ago, namely, the moving of the buildings to some new location where a permanent water supply can be assured is always a possible alternative.

Respectfully submitted,

J. J. Miller

23rd November, 1938.

Memorandum:

Dr. McGill

Re: Well, Sacred Heart
Indian School.

With reference to the above I advised you by telephone the circumstances in regard to the drilling of wells at this point and the unsatisfactory results. I am forwarding a copy of a memorandum from our Chief Engineer together with a report from Mr. Hoover.

Briefly, the report is that notwithstanding the drilling of a new well at a point 1,000 feet south of the school and the drilling of another new well a few feet from the old one, none of these have been successful in obtaining a sufficient supply of water. Our Engineers do not feel like recommending that any further expenditure be made in the matter of obtaining water from wells and it would appear that the only solution will be to alternate between the wells and the supply be supplemented, when necessary, by the hauling of water. Otherwise it would appear that the only satisfactory solution would be the moving of the buildings to some new location where a permanent water supply can be assured.

J. Milward
Director.

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 4)

"The final feeling of Father Rioux, Mr. Maughan, Mr. Pearson, the Pincher Creek plumber and Mr. Fetterly was one of discouragement.

"We hesitate to make any further recommendations which might involve considerable expenditure in developing the new well which in all probability will prove to be a small producer in critical times.

"It would appear however that by developing the second well, some additional water might be made available. Father Rioux is apparently averse to the development of this second well owing to added expense and work by the school engineer, and as the general cost to the Indian Department is a vital consideration we now prefer to leave the matter in the hands of a higher authority and to have definite instructions before making any move to develop this new well."

I should appreciate it if you would discuss the matter further both with Mr. Hoover and the Principal of the school and let me know your conclusions.

You will note that the only possible suggestion for improvement is to pump water from the wells alternately. Do you consider that this would be more expensive than pumping from only one well and, if so, I should like to know why this is the case.

Yours truly,

R. A. Hoey,
Supt. of Welfare & Training.

EXD.

Ottawa,
December 2, 1938.

Dear Sir:

In a memorandum dated the 23rd ultimo the Surveys & Engineering Branch reported fully regarding the action they had taken in attempting to secure water at the Sacred Heart Indian Residential School. The results are extremely disappointing and the Engineering Branch does not feel disposed to recommend any further expenditure at the present time.

Part of Mr. Hoover's report read as follows:

"The possibility of activating both wells alternately was discussed with Father Rioux. In reply he stated that the school finances would not stand a battery of half a dozen pumps each producing a small amount of water. It would necessitate study of the flow of both wells and of the time each occupies in filling up. Unfortunately, after about one-half hour's pumping the old well begins to "suck" as it were and only produces a small amount. In other words, the casing more or less fills up during a rest and then is discharged by the pump in one-half hour or less. The new well acts much similarly. Using the wells alternately would be a considerable hardship to the school engineer.

"Father Rioux claims that at present the gas for running the pump and automobile costs \$60.00 per month, of which over \$50 is for the pump.

"The conclusion to be reached is that the problem of supplying the school with water is almost, but not quite, as far off as ever, although both pumps activating alternately would help the situation.

PLEASE QUOTE
FILE 2-38.

Peigan Indian Agency, Brocket, Alberta.

December, 14th 1938.

Sir,

With reference to the Sacred Heart Indian Res. School on this Reserve, I beg to request authority to have sewage system cleaned out as it is showing evidence of clogging up again. The cost I would consider will approximate \$75.00, also may I be advised as to who should be engaged to do the work, Mr Stanley Pearson in the past has always done our plumbing & sewage work, but I do think he is on the list now. He is the only plumber in Pincher Creek, but there are more in Macleod.

Last spring I asked the Department to supply us with a set of tools for cleaning sewer pipes, in order to lower the cost of repairs in this connection, as I understand these have been supplied to the R/C school on the Blood Reserve, & they are then able to keep the pipes clean themselves. Could we be supplied with this outfit of tools, please.

I have the honour to be

Sir
Your obedient servant,

T. W. Victor Webb,
Indian Agent.

The Secretary,
Indian Affairs Branch,
Dept. of Mines & Resources,

Memorandum:

DEPUTY MINISTER

Re: Sacred Heart Indian Residential
School, Peigan Indian Agency,
Electoral District of Macleod.

At the present time the services of a plumber
are urgently required at the above-mentioned school.

The two towns nearest the school are Pincher
Creek and Macleod.

Mr. Stanley Pearson is the only plumber in
Pincher Creek.

I should appreciate your advising if it will
be in order to engage him for the work which will
involve an expenditure not exceeding \$75.00. If
not please let me know the name and address of the
plumber who should be engaged.

Sir,

Re Heating coil at Sacred Heart Indian Residential School

With reference to above noted heating coil at this school Father Ruaux informs me that it is again in need of repair or replacement. In March, 1938 this unit was renewed by Mr S. Pearson (Plumber) from Pincher Creek, at a cost of approximately \$33.00 using iron piping. It has to be built in sections, then placed in side the boiler & connected up. I spoke to Mr Pearson today about it being out of order, he suggests using Brass tubing, as the water will not affect it. May I have authority to have Mr Pearson do this work at an estimated figure of \$50.00., although costs will be kept as low as possible.

I have the honour to be

Sir,

Your obedient servant,

ENCL. #1

402-11A. R.C.

Calgary, August 28th, 1939.

Sir:

I had a few minutes' conversation in Calgary the other day with Rev. Father A. Ruau, Principal of Sacred Heart Indian Residential School, when he remarked that the gasoline engine in the power room at the school was very badly worn, and a new one would have to be provided to replace it. I understood him to say that a mechanic (expert) from Bruce Robinson Electric, Ltd., Calgary, had been to the school a short time ago to repair this engine, and that he (the mechanic) had remarked that it was so badly worn that it was not worth the cost of sending to the Calgary shop for overhauling. I also understood the Principal to say that he would write a letter, or report, on the condition of the engine, and send it to you, I presume, or to whoever called him to the school.

Father Ruau also said that he had prepared, or was preparing, a requisition for a new engine, to which I replied: "Send it to your Agent, Mr. Webb." I presume he has already done so? However, I have nothing on file here as yet. It may be that in classifying this matter you did not classify same as buildings - repairs (reference Department's Circular Letter No. C.154, May 17th, 1937), and you have already placed the matter before the Department: If so, I would ask you to kindly send me copies of all correspondence in this connection, for my file, including the mechanic's report. If you have not received this report, I would ask you to obtain same at once.

I am forwarding a copy of this letter to the Reverend Principal.

Yours truly,

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

Sir,

Re Sacred Heart School Lightplant engine.

I am enclosing herewith a letter received from the Principal of The Sacred Heart Indian Residential School, on this Reserve, reporting on the condition of the stationery 12 H.P. 2 cylinder Lister Brunson engine, which is used to pump their water, and for their lighting plant etc.

This engine I believe to be past service and the solution is for a new one to be installed there as soon as possible. Today the engine has broken down, and I have had to get the repair man down from Calgary to work on it. Last week I had to send out the spare magneto for the engine, the valves burn out, seats have to be renewed (this is a machine shop job) and now they cannot get the engine to charge the batteries, and have no lights, and have to crank the engine to start it. It will be noted that the engine has been in steady use since the school was erected approximately 13 years ago.

Will you please have this matter taken up with the Department at once, school will re-assemble soon & they cannot operate without an engine in good working order,

I have the honour to be
Sir,

Your obedient servant,

T. W. Victor Webb

COPY

Sacred Heart School,
Brocket, Alta.,
August 26th, 1939.

Mr. T.W.V. Webb,
Indian Agent,
BROCKET, Alta.

Dear Sir:

I beg to, hereby, formally apply for a new engine, for the electric plant at the Sacred Heart School, Brocket, Alta.

For the past two or three years, we have experienced all kind of trouble with the actual engine, being for days at a time without light and water. Everything has been done to prolong its life; it was sent to the shop at Calgary to be overhauled; Experts were sent to repair it, and once more it refuses to work, and just when the pupils are coming back to school to begin a new year.

The verdict of the last experts of the Bruce Robinson Co., Calgary, who worked on it, is that it is useless to have it sent any more to the shop, as it is worn out and finished. No one should be surprised that this engine has come to the end of its life, after 13 years of almost continual running, to generate electricity. pump water and do laundry work.

May I be allowed to suggest, that an engine of Canadian make be supplied, a Diesel-Fairbanks, if possible; the reasons for this are obvious.

Hoping that this request, will be given a favourable reception, I remain,

Sincerely yours,

(Sgd.) "E. RUAUX," O.M.I.,

Principal.

COPY

Calgary, Alberta
September 2, 1939

Mr. C. P. Schmidt
Department of Indian Affairs
Public Building
Calgary, Alta.

Dear Mr. Schmidt:

The writer was recently in Brocket and made an inspection of the engines at the Indian Schools.

The engine at the Sacred Heart School is in rather bad shape and probably will not run the season without a complete overhauling; however, the expense involved in putting this engine in a condition which would guarantee the degree of reliability necessary for this case, would, in our opinion be prohibitive, and the amount of money involved would be far better spent if invested in a new engine.

With regard to the engine at the St. Cyprian School, - this one is in a much better condition and will probably run satisfactorily for the present season without any further expense.

However, in each case we do not consider it advisable to do any extensive repairing, as it is virtually impossible for us to guarantee trouble-free service on engines which have reached the age of these two. Consequently we would recommend the provision of a new engine at the Sacred Heart School at once, and at the St. Cyprian School possibly next year.

Yours very truly,

BRUCE ROBINSON ELECTRIC LIMITED.

MEMORANDUM

September 2nd, 1939.

Mr. F. Kelly, Service Department, Bruce Robinson Electric Co., Ltd., Calgary, says he would recommend as replacement at both Sacred Heart and St. Cyprian's Residential Schools, Peigan Agency, Lister Diesel No. 10-2 engines. These could be "direct connected" to the generators now in use, whereas by installing another make of engine, it would probably be necessary to drive the generator with a belt.

Bruce Robinson Electric Company, Ltd., are Agents for this make of engine and carry a full line of parts in stock.

INSPECTOR OF INDIAN AGENCIES

406-11A. R.C.

Calgary, September 5th, 1939.

Re: 12 H.P. Lister gasoline engine, Serial H.373
in use at the Sacred Heart (R.C.) Indian Residential School, Peigan Agency.

Sir:

Reference Department's letter No. 116-1-5 dated July 28th, 1937, addressed to Mr. H. C. Lancaster, Indian Agent, Peigan Agency, Brocket, and Peigan Agency Voucher No. 148, dated October 4th of the same year, for \$316.10, in favour of Bruce Robinson Electric Co., Ltd., Calgary, for overhauling the above engine, I have the honour to enclose herewith copies of correspondence and memorandum (Enclosures Nos. 1 to 5, inclusive) relative to the above mentioned engine. These are self-explanatory.

Mr. F. Kelly of the Bruce Robinson Electric Co., Ltd., Service Department, when he handed me his letter on the P.M. of the 2nd instant, said it was not safe to begin another fall term with this engine, adding, that while he would not call this model obsolete, repair parts for same were not stocked in Calgary, and were hard to get anywhere in Canada.

This engine is used for lighting, pumping and laundry purposes at the School, and is the only mechanical power unit they have. I would therefore ask that the matter of providing the school with a new engine be given the Department's favourable consideration.

In my opinion the old engine should have a trade-in value.

The Secretary,
Indian Affairs Branch,
Dept. of Mines & Resources,
O T T A W A .

Your obedient servant,

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

AIR MAIL

Dear Sir:

I desire to acknowledge the receipt of your letter of the 5th instant with reference to replacing the gasoline engine at the Sacred Heart Indian residential school.

In view of the requirements of the Purchasing Branch it will be necessary for you to give me detailed information regarding the type of engine which you consider should be supplied.

Please make your explanations as complete as possible stating the catalogue number of the engine which you recommend, the work that it will have to do and any other information that you can obtain.

Yours truly,

(signed)

R. A. Hoey,
Supt. of Welfare & Training.

Calgary, Sept. 19th, 1939.

Sir:

*at
low
85th*

Reference your No. 116-1-5 of the 11th instant, I beg to advise that Mr. Schmidt is absent from the office on vacation, and will not return until the 26th instant. However, as the matter of purchasing an engine for Sacred Heart School, Peigan Agency, appears to be an urgent one, I got in touch with the Bruce-Robinson Electric, Ltd., Calgary, and asked them for details regarding the engine recommended by them to Mr. Schmidt. (Reference Memo. attached to our letter, even number, of the 5th instant).

I beg to forward herewith copy of letter received from that Company, together with pages from catalogue, giving a full description of the engine recommended by them.

*Urgent copy
of letter
of 8/19/39*

In conversation with Agent Webb, he informed me that the Bruce-Robinson representative, Mr. Kelley, had described this engine to him when at the school, and that it appeared to be quite suitable.

The engine is required for lighting, pumping water, and laundry purposes.

I trust this is the information required in this connection. If any details have been omitted, please advise. I will bring the matter to Mr. Schmidt's attention immediately upon his return to the office.

The Secretary,
Indian Affairs Branch,

SHIP TO Rev. E. Ruau, O.M.I., Principal, Sacred Heart Indian Residential School, Brocket, Alta.

Purpose for which required For the electric plant

NOTE:—Requisition for non-consumable equipment, state if New Issue or Replacement.
consumable equipment and supplies use columns 1 and 2.

Quantity		Quantity on hand (1)	Quantity used per month (2)	Unit Price	TOTAL
1	Engine				
Note: The engine at present in use was purchased several years ago and was overhauled in October, 1937, at a cost of \$316.10. Mr. C. P. Schmidt, Inspector of Indian Agencies for Alberta, advises that Mr. F. Kelly, of the Bruce-Robinson Electric Co., examined the engine on September 2 and stated that it was not safe to begin another term with it as, while he would not call the model obsolete, repair parts for same were not stocked in Calgary and were hard to get anywhere in Canada. The Principal requests a lister diesel equipment and I enclose quotation received from Bruce-Robinson Electric Company, Calgary, also a folder giving complete details of the engine requested. It is evident from the information received from the Inspector of Indian Agencies that this engine is required at the earliest possible date in order that the lighting, pumping and laundry services of the school will not be jeopardized.					

I hereby certify that I have personal knowledge that all the above articles are required in the Department and for Departmental purposes only. The expenditure required by this requisition is strictly unavoidable and the public interest will suffer if it is not made.

Peigan Indian Agency, Brocket, Alberta.
December, 9th. 1939.

Sir,

I beg to refer to your letter No. 116-2-5 of 16th ultimo, concerning the Fire Extinguisher refills I requested for the Sacred Heart Indian Residential School on this Reserve.

The new hose requested can be obtained at Factory Distributors, Calgary, priced...
5 hoses complete...\$4.75
5 washers.....\$.75
Total.....\$5.50

May I purchase this also one refill for one 2½ gal Foamite, that I had not previously asked for.

The fire bell at this school is not working I found out when I was at the school inspecting their fire fighting equipment, recently. May I have this repaired, it will take a good electrician, as it is in the wiring.
I have the honour to be

Department of Mines & Resources
Purchasing Department,
OTTAWA,
Ontario.

Dear Sirs,-

SUBJECT: Your Order #8684, Nov. 18/39
File No. 31085/15/13

Our invoice of November 23rd, #E11-22-27, has just been returned to us by the principal of the Sacred Heart Indian Residential School, Brocket, Alta.

When received by us this invoice did not have the receipted freight bill attached, and we desire to point out that your instructions to us in this case were carried out that when the invoice was forwarded by us the original copy of the freight bill was attached to the invoice.

We can be certain that the freight bill was forwarded because it was stapled to the original copy of the invoice and the staple still remains in the invoice showing that the freight bill was removed. As recently advised we are now attaching a copy of the freight bill to the invoice with mucilage, so that it cannot be easily removed, and we trust will reach your department from the consignee as required.

Yours very truly,

PYRENE MANUFACTURING COMPANY
OF CANADA LIMITED.

Ottawa,
August 20, 1940.

Dear Sir:

I have for acknowledgment your letter of the 16th instant and also a requisition for the replacement of the electric batteries at the Sacred Heart Indian Residential School attached thereto.

In the estimates of this year the sum of \$400.00 was set apart for the purchase of equipment and general repairs at the Sacred Heart School. In view of the fact, however, that the batteries will cost approximately \$400.00 it will not be possible to purchase additional equipment or to undertake repairs at the Sacred Heart School during the present fiscal year and you should so inform the Principal.

Yours truly,

R.A. Hoey,
Supt. of Welfare & Training.

Dear Sir:

With reference to your letter of August 22 re estimates for painting the St. Cyprian and Sacred Heart Residential Schools your requisitions are being sent to the Purchasing Branch and will receive their immediate attention. The Department is somewhat at a loss to know why the Principals of our residential schools wait until the schools are ready to open to carry on the interior painting.

Yours truly,

R.A. Hoey,
Supt. of Welfare & Training.

FILE 2-414

Peigan Indian Agency, Brocket, Alberta. No. 116.

September, 2nd. 1941.

Sir,

I have a request from the Principal of the Sacred Heart Indian Residential School on this Reserve, to ask the Department for permission to construct an addition to the existing school building, sized 40 ft x 60 ft on the west end, this to be built by the Society of the Oblate Fathers, at their own expense, without any cost to the Department.

It is intended to use this new part as quarters for the girls, leaving the present building as for the boys, there will be a semi-basement as a recreation room & bathroom, on the first floor two classrooms, the second floor to use as a girls' dormitory, and the top floor install a chapel & also a sewing room.

Father Ruau said they do not expect any extra grant, and said the present heating plant would take care of the new project. At present they are drilling a new well at their own expense, to try and augment the supply of water which of late years has been a problem.

Will the Department please let me have early consideration of their request, as they have a lot of material on the ground (brick) and would like to start before the cold weather arrives.

I have the honour to be

Sir,

Your obedient servant,

INSPECTOR OF INDIAN AGENCIES

CANADA

INDIAN AFFAIRS BRANCH

406-11A. R.C.

MINES AND RESOURCES

Calgary, Sept. 9th, 1941.

Sir:

I beg to enclose herewith a letter, addressed to the Secretary, by Mr. T.W.V. Webb, Indian Agent, Peigan Agency, re building an addition to Sacred Heart Indian Residential School at Brocket.

This matter was mentioned to me this Summer by Rev. E. Ruau, the Principal, who stated that it was the intention of the Oblate Order to build an addition in the near future, and that he was gathering material, buying when he had a chance to get something cheap, and that he had purchased a quantity of second-hand fire brick from someone West of Brocket on the Crow's Nest Pass railway. I saw some of these, and they appeared to be in very good condition.

I asked the Principal not to start any work before informing the Department, and getting authority; I also suggested that he submit a plan and sketch, and pointed out to him that the heating would be an important matter to consider, as he mentioned a separate building, with four outside walls, to be connected to the present building by passages only.

I also mentioned the very important matter of getting an ample supply of water, because as the Department know, the supply of water from the original well was not sufficient. A spring nearby was tapped to increase this supply, but with little success, as we barely have enough for household purposes; there are times when the supply is very limited, and flushing generally is not done as freely as it should be. An attempt to sink another -- a second -- well, a few hundred yards South of the buildings was made, and given up, no water being found. Another -- a third -- well was sunk a few feet from the original well, near the buildings: Water was found here at the same level as in the original well, but I am told that this did not increase the supply; it would appear that pumping one affected the other. -- As regards fire protection, I am not satisfied with what we have.

We must expect, that with extra space (accommodation), more children -- of which there is a large number on the Reserve -- will be accepted in this School.

My recommendation is, that before giving their approval, the Department have one of the Engineer-Architects of the Parks Branch, from either Waterton or Banff, call at the School, look over the plans and location, and give special attention to heating and water supply, and fire protection.

It will be noted that Mr. Webb says they are at present drilling a new well at their own expense. If water is found, I would strongly recommend that a proper test of the capacity of the supply be made.

Your obedient servant

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate,
Dept. of Mines & Resources,
OTTAWA.

S/B

116-2-5

Ottawa,
September 18, 1941.

Dear Sir:

I am in receipt of your letter of the 9th instant with reference to the proposal of the Principal of the Sacred Heart Residential School to erect an addition to the building.

As you are aware, construction of all Government buildings has been discontinued with the exception of those required for war purposes.

In your letter you point out the many difficulties that might arise if the Principal proceeded with the erection of the proposed addition. Very careful consideration has been given to the contents of your letter and it has been decided that we cannot view favourably the erection of any addition to a Government-owned school by the Church authorities. You should so inform the Rev. Principal.

May I add that in view of the limited amount at our disposal for the payment of per capita allowances it would not be possible to increase the pupilage at the Sacred Heart School even though additional accommodation were available.

Yours truly,

Mr. C.P. Schmidt,
Inspector of Indian Agencies,
Calgary, Alta.

Peigan Indian Agency, #116,
Brockton, Alta.,

Oct. 10th. 1941.

Dear Sir:-

Re Well at Sacred Heart Res. Ind. School.

Father Ruaux has been having considerable trouble with the water well at his school, for the last two weeks. He was able to connect onto a spring which so far is supplying enough water to get along with. I understand though that this supply is none to reliable.

Father Ruaux was afraid at first that the water supply in the well was gone but that proved to be incorrect. He pulled part of the casing and found that the third length of pump rod down was broken. This he repaired himself and thought his well was alright.

He phoned in to-day and said they still could not get water and had discovered that the 9th rod down is also broken. He has not the proper equipment to work with for this job and asked that we get the department to take care of it.

This well is over 300 feet deep and the pump cylinder is down 300 feet, this means quite a job of lifting and holding the casing.

Mr. Webb, the agent is on sick leave. I phoned the Inspector and he is out of the city.

I got in touch with Mr. S. Pearson, Pincher Creek, who has worked at this well on previous occasions and asked him to give me an approximate cost of putting in new pipe rods where necessary and he informed me that the cost would likely run between \$75.00 and \$100.00.

Will the department kindly wire me authority to have Mr. Pearson get this well in working order?

I have the honour to be

The Secretary,
Indian Affairs Branch,
Department of Mines & Resources,
OTTAWA, Canada.

Sir,

Your obedient servant,

W.B. Steeves,
Clerk.

November 30th, 1942.

Mr. J. Faunt,
Indian Agent,
Brocket, Alberta.

Dear Sir:-

On account of the shortage of labor, to make sure to have night watchman, I had to engage one for the 1st of the month of October, & as the winter started earlier than usual, I put him on duty at once. I wonder if at Ottawa they would think it bold on my part to ask them to pay his salary for that month. I put the matter into your hands, knowing that you will do what you will judge to be right about it.

Thanking you most sincerely,

I am,
Yours truly,

Sir:-

Enclosed herewith please find copy of a letter I have received from Father Ruaux of Sacred Heart Indian School.

Father advises me that he has had the same man for several years & that on account of the shortage of labor & the fact that this man was about to be employed by someone else, he had to act quickly to retain his services.

What he says about the weather & the early winter is correct & I would respectfully recommend that his request be given favorable consideration.

Your obedient servant,

J. T. Faunt.

Mr. J.T. Faunt, Acting Indian Agent, Brocket, Alta.

With reference to your letter of the 4th instant, the Department will allow the usual monthly grant of \$40.00 toward the salary of the night watchman at the Sacred Heart Residential School for the period November 1, 1942, to April 30, 1943. I regret that we cannot allow payment for the month of October, due to the fact that in our appropriation we have only provided funds sufficient to cover the period mentioned above.

AIR MAIL

Mr. C.P. Schmidt, Inspector of Indian Agencies,
Calgary, Alta.

I am in receipt of a telegram from Indian Agent Faunt in which he states that the water supply at the Sacred Heart School has completely given out on account of continued dry weather. He recommends temporarily closing the school in case of a possible outbreak of sickness. Please communicate with him at once and authorize sending the children home temporarily. I am communicating with the Surveys & Engineering Branch with a view to having one of their officials visit the Sacred Heart School within the next week. I am informing the Director of the Surveys & Engineering Branch that both you and Mr. Faunt will give every assistance to their officer.

Memorandum:

DIRECTOR

Surveys & Engineering Branch

Re: Sacred Heart Indian Residential
School, Brocket, Alberta.

I am in receipt of a report from the Indian Agent in which he states that the water supply at this school has completely given out, due to continued dry weather. It would be appreciated if you could arrange to have one of your officers visit this school immediately and submit a report indicating what steps, if any, can be taken this fall to provide a water supply. I am hopeful that you will be able to have one of your men visit this school within a week. Inspector Schmidt will be willing to assist your official in reaching Brocket, or he can go by train from Calgary to Brocket and, if he notifies J.T. Faunt, Indian Agent, Brocket, he will be glad to assist.

Heoules.

Purchasing Orders Nos. 20329 & 20330

I note that 50 blinds ordered for Sacred Heart school have been included in order no. 20329 & no doubt have been charged against St. Cyprian's school. The amount involved is \$57.50.

Order No. 20330 covers three sewing machines & I note that these too have been ordered for St Cyprian's school, though no requisition was made for them.

Sewing machines however were under consideration for Sacred Heart school.

I have taken delivery of the sewing machines & am holding them pending further instructions.

Dept. File No. 116-2-5.

Further to my letter, even file number, of the 12th instant, re the above, I beg to advise that in conversation with Rev. G. Crepeau, Principal of the school, who was in Calgary this A.M., he stated that he had been told by the Engineer at the school, that the water supply was so limited that he doubted whether it would be possible to operate the steam furnace to heat the building throughout the winter.

The Rev. Principal is very anxious to know whether a decision has been arrived at, and what is being done re a supply of water for the school.

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

Memorandum:

SURVEYS & ENGINEERING BRANCH.

Re: Water Supply, Sacred Heart
Indian Residential School,
Brocket, Alberta.

I am sending forward herewith copy of
an Air Mail letter received by this Branch from
Mr. C. Pant. Schmidt, Inspector of Indian Agencies,
for Alberta.

It would be very much appreciated if
we could have from you a report on the water supply
at the marginally noted school. If an adequate water
supply is not available, it will be necessary to
take steps to dispose of the live stock at an
early date.

Director.

Dear Father Crepeau:

This Branch is in receipt of a letter from Mr. R. W. Thurston, of Globelite Batteries, Limited, who has recently completed an inspection trip of a number of our schools in the Prairie Provinces. In his reference to the battery at the Sacred Heart School Mr. Thurston states:-

"The water level of this battery is down one-half inch in all jars. Suggest that it be kept at proper levels. Otherwise it appears to be in good condition. This battery is very poorly located and is subjected to a lot of dust and dirt. We strongly urge that it be moved to some other location, preferably out of the boiler room. The Indian Agent has a few suggestions about a location".

It is our hope that you will be able, without inconvenience, to find a new and better location for this battery.

Yours very truly,

R. A. Hoey,
Supt. of Welfare & Training.

Reverend G. Crepeau, O.M.I.,
Principal,
Sacred Heart Indian Residential School,
Brockton, Alberta.

Mr. C.P. Schmidt, Inspector of Indian Agencies,
Calgary, Alta.

On receipt of your recent letter, regarding the water supply system at the Sacred Heart Indian Residential School, a memorandum was immediately forwarded to the Surveys & Engineering Branch. For your information I may add that some two months previously we forwarded a memorandum to this Branch pointing out to them that the water situation at the Sacred Heart Residential School was rather serious.

As we received no reply to our memoranda, we phoned the Surveys & Engineering Branch today and we were verbally advised that the first report from the officer whom they sent to Sacred Heart was extremely discouraging, as he was unable to locate any source for a new water supply system for the Sacred Heart School. However, on receipt of this report from their officer the head office of the Surveys & Engineering Branch wrote another letter to Mr. Hoover, requesting him to have the whole matter reconsidered.

My purpose in writing to you at this time is to convey the information that every possible effort is being made to secure a source of water supply for this school. As soon as we have more definite information we will advise you.

R.A. Hoey,
Supt. of Welfare & Training.

Re: Water Supply Sacred Heart Indian Residential
School, Brocket, Alta.

With reference to recent correspondence relative to the above, this matter has been receiving the active attention of our Engineering and Construction Service.

It will be recalled that the water supply at this school has been unsatisfactory since 1937 and possibly even earlier and that a number of wells have been drilled to date without securing an adequate supply. Other possible sources of water supply have also been investigated. Briefly these are,-

Well No. 1 - This was the first well drilled and by 1937 the water supply from it was inadequate. It is close beside the school. Originally drilled to a depth of 300 ft. it was cleaned out and drilled a further 30 ft. in grey shale in November 1937. Little improvement was effected thereby. The volume of water that could be obtained from it was 600 gallons per day. This well is said now to produce only about 200 gallons per day.

Well No. 2 - This well, the second, is situated about 1,000 ft. south of the school on a small hill. It was drilled in March 1938 to a depth of 350 ft. but when its capacity was found to be only about 20 gallons per hour, the casing was pulled immediately.

(over)

Indian Affairs. (PG 10, Volume 6362, file 759-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Well No. 3 - This, the third well, is situated about 10 ft. south of well No. 1. It was drilled in September 1938 to a depth of 295 ft. but its capacity was found to be somewhat less than that of well No. 1 and it apparently has not been in use although the casing was left in it.

Well No. 4 - This, the fourth well, is situated about 100 ft. south of well No. 2. It is not known just when it was drilled. We are advised that it was drilled to a depth of 100 ft. and no water being found, was abandoned.

No. 5, Developed Spring - This Spring issues from a rock face at the head of a small coulee, about 1000 ft. east of the school. The water is collected in a concrete tank which has been constructed there and is apparently being pumped to the school. The amount of water available varies with precipitation conditions. It is possible also that water gets into this tank by seeping back from the pond in front of the tank. This pond has been formed by a dam having been built across the coulee 100 yards north of the spring. Surface run-off water collects in this pond; at times when the spring is flowing freely the concrete tank may overflow into the pond. In September last about 500 gallons per day could be obtained from this concrete tank.

Well No. 6 - This is Neil Yellow Wing's well. It is situated about 1/2 mile southwest of the school and apparently was drilled to a depth of 70 ft. On a test made in October last the capacity of this well was only 42 gallons per hour. From experience with other wells, it is probable that if it were kept pumped dry for a considerable period its capacity would be much less.

No. 7 - Springs said to exist at one time in the vicinity, have since dried up.

North of the school the ground falls away in a long gentle slope with no sharp break to indicate a site where it would seem more likely that water would be found than at the

.....

-3-

points where the wells referred to have been drilled.

The foregoing would not seem to justify any hope that an adequate water supply can be secured from springs, or from wells to a depth of 300 ft., under all conditions of precipitation, nor is there anything to indicate that sufficient water would be obtained from deeper wells. However, in view of the large investment in the school we have had a preliminary estimate prepared of the cost of a 600 ft. well. The drilling and casing of an entirely new 600 ft. well would be about \$3800.00; to deepen well No. 3 to 600 ft. would cost about \$2200.00. In either case if an adequate water supply were found the additional cost of installing a suitable pump might be to the order of \$1500.00.

It is our opinion that any further expenditure on well drilling will be a gamble; that the odds are heavily against any adequate water supply being found and only the heavy investment in the school buildings warrants it even being considered.

We understand that water is now being brought by truck from Brocket to augment the present insufficient supply at the school. We would suggest that this arrangement be continued for a time to see if precipitation conditions will not improve sufficiently to afford an adequate supply from the existing well and spring.

J. M. Wurdle.

AIR MAIL

Ottawa, November 12, 1943.

Mr. C. P. Schmidt, Inspector of Indian Agencies,^{EX'D.}
Calgary, Alberta.^A

I am sending forward herewith copy of a report on the water supply at the Sacred Heart Indian Residential School, received by this Branch from the Surveys and Engineering Branch. The subject matter of this report, you will note, is self-explanatory.

In view of the serious condition existing at this school, resulting from an inadequate water supply, it is just possible that you may deem it advisable to visit the school at an early date.

The subject matter of the memorandum received from the Surveys and Engineering Branch has been very carefully considered by the officials here. In our judgment there is not even a remote possibility of securing the funds necessary to undertake the drilling of one or more of the wells to a depth of 600 ft. The estimates for the fiscal year 1944-45 have already been prepared and approved at the Minister's office. In these estimates no provision whatever has been made for an expenditure such as this at Sacred Heart.

When considering the operation of this school, a number of suggestions will naturally occur to you. In your last report on this school you intimated that there were 14 milch cows at the institution and that 10 were being milked at the time of your visit. In addition to these cows, you also listed 26 head of other cattle, 6 work horses and one colt, 2 saddle horses and 65 hogs. I have been wondering if it is at all necessary to maintain such a large number of cattle at this school.

Mr. Doucet, you may remember, made an educational survey of this reserve in the year 1942, and

Indian Affairs. (RG 10, Volume 6362, file 759-5, part 5)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

since that time the Principal has suggested to the Department that the boys might be provided with education at the institution on a day school basis. We are anxious to know if, in your judgment, it would be at all practicable to operate this institution as an Indian day school or improved day school, making provision for the transportation of the pupils now in attendance and on the understanding that a hot lunch or noonday meal would be provided at the school. In this way the members of the staff, who now number approximately 16, might be substantially reduced and practically all the cattle disposed of. It is just possible that an arrangement somewhat similar to this may have to be worked out in connection with a number of our residential schools in the immediate future. If you and the Principal are of the opinion that it would be scarcely feasible to operate the institution as an Indian day school, what other means might be adopted to conserve the available water supply - a supply that may be still further reduced at any time. In making this investigation it might prove helpful to you and to the Principal to consult the public school inspector for the district.

I am sending a copy of this correspondence to the Reverend H. Routhier, O.M.I., Provincial of the Oblate Order, Edmonton, Alta., for his information.

REPORT ON THE INSPECTION OF THE DIESEL
LIGHTING PLANT AT SACRED HEART SCHOOL.

September 21st. The Diesel at this point was in very bad shape and shows signs of neglect. I was told that the cylinder heads had not been removed since the engine was installed, and the valves were badly burned and a heavy carbon deposit almost closed the exhaust and air intake ports on the cylinder heads.

The batteries should be changed from their present location to a more suitable place. Where they are installed now they are subject to a lot of dust, dirt and moisture. I understand that the pump which is now in use occasionally blows out the packing and water is sprayed on the batteries as a result.

I also checked an open circuit on #6 circuit and found it is a job for an inside wire man as it runs between the walls.

I would recommend that a competent wire man check this short circuiting.

This Diesel should also be checked over once every 6 months the same as the one at St. Cyprian School.

Copy sent to Inspector Schmidt

Ottawa,
November 17, 1943.

EX'D.
A

Reverend Sir:

I have received a copy of the report of the mechanic on his inspection of the Diesel lighting plant at the Sacred Heart School, also a copy of Inspector Schmidt's letter to you dated the 11th instant.

The Department expects that you will arrange at the earliest possible date for changing the location of the batteries as suggested by Mr. Schmidt.

I also trust that you will arrange to have someone visit the school at an early date in order to inspect the open circuit on No. 6 circuit. If any heavy expenditure is required to place this in proper condition, you should let me know.

The mechanic also points out that your Diesel engine is in very bad condition and shows signs of neglect. He was informed that the cylinder heads have not been removed since the engine was installed and the valves were badly burned and a heavy carbon deposit almost closed the exhaust and air intake ports on the cylinder heads. I cannot too strongly stress the importance of every possible attention being given to the mechanical equipment at the Sacred Heart School. I, therefore, trust that we will not receive any similar reports in future.

Yours truly,

Rev. G. Crepeau, O.M.I.,
Principal,
Sacred Heart Residential School,
Brockton, Alta.

Dear Sir,

Brocket, November 15, 1943.

In reply to your letter of October 29 last, regarding the inspection of the battery at our School, may I state the following:

The water level has been attended to immediately, and I have seen to it and shall continue to see to it that a supply of distilled water be kept on hand for that purpose;

As to changing the location of the said battery, I have put the whole matter before the Indian Agent, who was mentioned in the report of the inspector. He is going to provide for that point in a near future, he assures me.

Hoping that these measures will prove satisfactory,

I remain,

Yours truly,

Rev. George Crepeau, O.M.I.
Rev. George Crepeau, O.M.I.

COPY: for your information, please.

406-11A. R.C.

Calgary, November 11th, 1943.

Rev. Sir:

EX'D
A
I am enclosing herewith copy of the report submitted by the mechanic from Bruce Robinson Electric, Ltd., Calgary, who checked and repaired the Diesel engine at your school in September, last. I wish to draw your particular attention to the first paragraph of this report, which reflects on the mechanic employed at your school.

As regards the changing of the batteries from their present location, I have on one or two occasions when at the school, remarked that these should be placed in a different room, and I suggested a long, narrow room across the corridor from the laundry, which has one medium-sized outside window only, if it were possible to utilize this room for this purpose. I also remarked that one wall of this room could be used for storing accessories and hanging hand tools. I do not think that it would require an expert to make this change; your mechanic should be able to do this work.

As regards the open circuit on No. 6 Circuit: I would suggest that you talk this matter over with Mr. Faunt, the Indian Agent, and others who understand this sort of thing; it might be possible that you arrange to have someone who does this class of work call at the school, on a visit, and give you advice as to how to go about it to remedy this defect. If it is a case of having to engage special tradesmen to do so, the matter will have to be placed before the Department and authority obtained first, before incurring the expenditure. This open circuit was not mentioned to me before; yet I presume there must be some lights that do not work.

I wish it understood, that we are aware that you have not been in charge, and have not lived at this school, before September of this year.

Yours very truly,

Rev. G. Crepeau, O.M.I.,
Principal, Sacred
Heart I.R. School,

November 9, 1943.

In this connection I am sending forward
herewith, for your information, copy of a report
received by this Branch from Inspector C. Pant.
Schmidt. While no provision has been made in the
1944-45 estimates for the drilling of an additional
well at this school, it would be appreciated if we
could have from you an expression of opinion with
respect to the recommendation made by Inspector
Schmidt on page 6, paragraph 4, of his report.

H. W. M. S.
Director.

Dear Sir:

In reply to your letter of November 17, regarding the report of inspection of our Diesel lighting plant, may I state the following:

I have tried to make arrangements to have the location of the batteries changed, and it will have been done in a very near future.

As regards the short circuit in our wiring, I had an electrician at the School already, Mr. Taylor, of the Calgary Power, from Pincher Creek; he located the short, and will come as soon as he can possibly do so to fix it. I do not think that this will involve a heavy expenditure.

I hope with you that the reports that you will receive from now on will be better. But may I remind you that I came to this School only at the end of August, and also that our mechanic is actually very busy hauling water. But I can assure you that we shall be doing our very best to keep our equipment in good condition.

Yours truly,

Rev. George Crepeau O.M.I.

Approved

Dear Sir:

I have come down to the Sacred Heart School at Brocket, to study, in company with Mr. O. D. Bush, a well driller with rotary equipment (address: 231, 8th Avenue West, Calgary, Alberta), the question of drilling a well for the needs of the School.

The problem is critical and urgent of solution, as the School has had to haul water a distance of 5 miles, getting water from the C.P.R. at Brocket, in a 1000 gallon tank at least three times a day, and this does not really suffice for the needs of the School, especially when washing has to be done. No one can contemplate that this must become a permanent situation, all the more so that the C.P.R. Superintendent has notified the Principal of the School that this can only be a temporary arrangement. Owing to replacements being made these days at the C.P.R. reservoir at Brocket, the water is being hauled from Pincher Creek, a distance of 18 miles. One hates to think of the situation if a fire were to break out. This hauling of water has been going on since the 7th of November, and no relief seems to be forthcoming from Ottawa, at least not to my knowledge.

I would therefore request that the Oblate Fathers be authorized to hire a well driller as soon as possible to drill at the School to a depth of at least 700 feet if needs be. In the past, two wells at least were dug to a depth of 300 or a little more but in neither case have they found more than surface water. Mr. Bush offers to drill a well with a rotary equipment at a cost of \$4.50 per foot, and the cost of the casing would be approximately \$1.38 per foot. We are anxious that the work start as soon as possible, that is, not later than the 3rd of January, at which date Mr. Bush would be ready to start. The Oblate Fathers are ready to advance the money to start the work immediately and I do ask that there be no delay in giving an answer to my urgent request either by telegram or air mail to Edmonton.

Yours truly,

H. Routhier

DIRECTOR

Surveys & Engineering Branch

Re: Water supply, Sacred Heart
Indian Residential School,
Brocket, Alberta.

With reference to our memorandum of December 3 and previous correspondence in connection with the above, I enclose, for your information, copy of letter just received from the Provincial of the Oblate Order who visited the school.

The contents of this letter was discussed with Mr. Pounder this morning by Mr. Phelan and the latter understands that your Branch wrote to Mr. Hoover about the 10th or 11th instant.

If you have not received any reply it would be appreciated if you would telegraph Mr. Hoover and request him to forward his report immediately. At that time you might feel it advisable to mention the name of Mr. Bush, who apparently is equipped for drilling wells.

Acting Director.

AIR MAIL

Dear Father Routhier:

Your letter of December 15 reached me this morning and I had Mr. Phelan go to the Surveys & Engineering Branch with a view to interviewing these officials regarding the digging of another well as suggested in your letter.

I am informed that Mr. Hoover was written about the 10th or 11th instant and asked for a further report. This has not yet reached the Surveys & Engineering Branch, but they are telegraphing Mr. Hoover again asking him to rush his report and at the same time they are advising him regarding Mr. Bush whom you mention in your letter.

I feel that we cannot take any action until we receive Mr. Hoover's report and the contents of it is carefully studied by the officials of the Surveys & Engineering Branch.

As you realize, the digging of a new well will probably involve a cost between \$5000.00 and \$6000.00 and, judging by previous experience, we have no assurance that water will be obtained in an adequate quantity. In other words, it is a pure gamble. I am advised that competent engineers have determined that the water level of the Old Man River is 256 feet. Consequently when a well is drilled below this point it would appear that there is not much seepage from the river mentioned. All the wells, I believe, at the Sacred Heart School are below this depth and yet water has not been obtained in sufficient quantities.

There is another alternative that might be considered; namely, deepening the No. 3 well. Our

information is that this was dug to a depth of 300 feet and that the casing is still in it. To deepen this well another 200 or 300 feet would involve less cost and possibly we would have just as much chance of striking water as in digging a new well.

I thought you would like to have all the above information, as the engineers of the Surveys & Engineering Branch have been interested in securing water at this school for several years past. I can assure you that as soon as Mr. Hoover's report is received I will write to you again.

Yours truly,

R.A. Hoey,
Supt. of Welfare & Training.

EX'D
A.

Mr. R.A. Hoey,
Indian Affairs Branch,
Ottawa, Ont.

Dear Mr. Hoey:

My sincere thanks for your prompt reply to my letter of the 18th. I shall await the next one following the engineer's report, as you understand that I am extremely anxious to have something done.

I had thought that it would save considerably if the well that has been dug to a depth of 295 feet and in which the casing still remains. Mr. Bush thinks that it would be hard to dig in this casing which is five and five-eighths inches in diameter at the surface and five inches lower down. Of course I am no judge in this matter. I am told that at the Anglican school which is four miles away from the Sacred Heart School, there is always an abundance of water however dry the season may be. I am praying that the same may be found for the S.H. school.

My best wishes to you, Mr. Phelan and Mr. Doucet for Xmas and the New Year.

Gratefully,

H. Routhier O.M.I.

Memorandum:

DEPUTY MINISTER

Re: Water Supply, Sacred Heart Indian
Residential School, Brocket, Alberta.

The water supply at this school has again given out and it is necessary, as a temporary expedient, to haul water from the C.P.R. locomotive supply tank at Brocket, a distance of five miles.

The lack of water at this school has been a constant source of trouble for several years and the matter has been considered on several occasions by the field officers of the Surveys and Engineering Branch.

The Sacred Heart Residential School was erected in the fiscal year 1926-27 at an approximate cost of \$60,000.00. It has an authorized pupilage of 50. A report just received from Inspector Schmidt indicates that the population of the Peigan Band has increased in the last sixteen years from 382 to 551. The school population has increased in accordance with the total population. In 1942 Mr. Doucet carefully surveyed this reserve in order to ascertain if day schools were feasible. At that time he expressed the opinion that the Indians are not living sufficiently close together to enable the children to attend day schools. A report from Inspector Schmidt dated November 24, 1943, expresses the opinion that the operation of a day school would not be practical.

For your information I enclose the last report submitted to this Branch by the Surveys & Engineering Branch. We realize that it is purely a gamble whether we can secure water, but, on the other hand, we also feel

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

that the school must be kept in operation, if at all possible, and to do so a water supply is necessary.

I, therefore, recommend that we accept the suggestion made by the Surveys & Engineering Branch; namely, either drill a new well or deepen the present well known as No. 3. If water is not found by the time a depth of 600 feet is reached it is understood that the field officers of the Surveys & Engineering Branch will report back for further instructions. The expenditure involved will vary from \$2,200.00 to \$3,800.00. Funds to the amount stated are available in the appropriation for the current fiscal year and I feel that authority should be issued immediately to proceed with the work.

Acting Director.

PP

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

ARCHIVES PUBLIQUES
CANADA

- 2 -

case and we have no reason to believe that such a supply exists in this area.

"In this connection, Mr. W. Maughan of the Union Drilling Co., Calgary, and the brother of J. Maughan, stated that they had employed a rotary outfit on water well drilling at one time but had discontinued the practice and sold the rotary equipment because it had not been satisfactory for the reasons as outlined."

It will be recalled that in our memorandum of November 9th last we advised that the drilling and casing of an entirely new 600-foot well, the drilling to be done by the regular churn or cable tool method, would be about \$3800 or to deepen well No. 3 to 600 feet would cost about \$2200.

In view of Mr. Hoover's report and the great expense that would be involved, we are not in favour of rotary drilling. We would recommend therefore that we be authorized to instruct Mr. Hoover to draw up an agreement, to be signed by a reputable well driller, providing for the drilling of a 600-foot well by the churn or cable tool method. This agreement should include a provision that the decision as to whether well No. 3 should be deepened to 600 feet or whether an entirely new well should be drilled should be left to be agreed upon by Mr. Hoover and the driller after examination of well No. 3, whether its casing is free, the condition of the casing etc.

After the well reached a depth of 600 feet, and if no water has been found, a report should be submitted with an estimate of cost of drilling an additional 200 feet, when a decision can be made as to whether any further drilling should be done.

In view of the opinions expressed in previous correspondence over a number of years regarding this matter, it need hardly be added that we are not optimistic about a water supply adequate to the needs of the school being found at a depth of even 600 or 800 feet. The existing circumstances and the heavy investment in the school buildings may however, warrant one more effort being made to secure a well with an adequate supply.

(Sgd.) J.M. Wardle,
Director.

Surveys and
Engineering Branch

Ottawa, December 28th, 1943.

Dr. McGill

Re: Water Supply, Sacred Heart Indian Residential
School, Brocket, Alberta.

In reply to your memoranda of December 3rd and December 18th relative to the above, this matter has been the subject of further correspondence with our Engineering and Construction Service and Mr. Hoover.

Mr. Hoover had been in touch with drilling contractors in Calgary and sent in his report airmail on December 21st, the day he was wired regarding the matter. He had been advised that the cost of an 800-foot rotary drilled well, including drilling, casing, moving equipment to Brocket, testing, etc., would be from \$7,000 to \$10,000.

In connection with rotary drilling for water, Mr. Hoover states as follows:

"Aside from the difficulty in obtaining a rotary outfit and the expense involved, it is our opinion that the use of rotary drilling for water wells is impractical unless the objective is a known water-bearing horizon, which condition does not obtain in this case. As the hole is full of drilling fluid (weight about 11 lbs. per gallon) at all times during the drilling operations, the presence of water cannot be determined unless a string of casing is run and the hole pumped out. Examination of cuttings from the well gives the only clue to possible water bearing horizons, and several strings of casing might be run without success. Also, there is the added danger of 'mudding off' producing horizons. That is, when the bit enters a horizon carrying water at a pressure less than the head of drilling fluid in the hole, the drilling mud is forced into the formation. When a point of equilibrium is established the suspended particles in the drilling mud may be deposited and seal off the horizon. These objections, of course, do not apply if an artesian supply is encountered with sufficient pressure to lift the drilling mud from the hole. However, this is a particular

AIR MAIL

Reverend Sir:

I desire to acknowledge the receipt of your telegram of the 8th instant which reached our office this morning. For some days past we have been conferring with the officials of the Surveys & Engineering Branch and the Geological Survey Branch in regard to the water situation at the Sacred Heart School.

We are not yet in a position to state definitely what action can be taken, but I am writing to assure you that this important matter is receiving every possible consideration.

Yours truly,

Philip Phelan,
Chief, Training Division.

Brocket, January 13, 1944

Dear Sir:

I wish to thank you for your prompt reply to my wire in connection with the water situation at our School. I was sure that you were dealing with the matter, but I simply wanted to let you know what the actual situation is.

We are still hauling water from the C.P.R. station at Brocket, and we manage to get enough for the essential needs of the School, but should the weather change, and snow come, and we cannot expect the weather to remain as fine as it has been so far, it will be an awful job to keep us provided with enough water to go on with the number of children that we have.

This is the only reason why I am so anxious to see the problem solved soon. We have been lucky enough not to have any sickness, and I think that our night watchman is reliable enough that there is no great danger of fire; but you see how things are...

So, once more, thank you for the interest that you take in our School and the work we are doing on this Peigan Reserve, and whenever a decision is reached, please be kind enough to notify me or Father Roultier (Edmonton) as soon as possible.

Yours very truly,

Rev. George Crepeau O.M.I.

-2-

"producing horizons. That is, when the bit enters a horizon carrying water at a pressure less than the head of drilling fluid in the hole, the drilling mud is forced into the formation. When a point of equilibrium is established the suspended particles in the drilling mud may be deposited and seal off the horizon. These objections, of course, do not apply if an artesian supply is encountered with sufficient pressure to lift the drilling mud from the hole. However, this is a particular case and we have no reason to believe that such a supply exists in this area.

"In this connection, Mr. W. Maughan of the Union Drilling Co., Calgary, and the brother of J. Maughan, stated that they had employed a rotary outfit on water well drilling at one time but had discontinued the practice and sold the rotary equipment because it had not been satisfactory for the reasons as outlined."

It will be recalled that in our memorandum of November 9th last we advised that the drilling and casing of an entirely new 600-foot well, the drilling to be done by the regular churn or cable tool method, would be about \$3800 or to deepen well No. 3 to 600 feet would cost about \$2200.

In view of Mr. Hoover's report and the great expense that would be involved, we are not in favour of rotary drilling. We would recommend therefore that we be authorized to instruct Mr. Hoover to draw up an agreement, to be signed by a reputable well driller, providing for the drilling of a 600-foot well by the churn or cable tool method. This agreement should include a provision that the decision as to whether well No. 3 should be deepened to 600 feet or whether an entirely new well should be drilled should be left to be agreed upon by Mr. Hoover and the driller after examination of well No. 3, whether its casing is free, the condition of the casing etc.

After the well reached a depth of 600 feet, and if no water has been found, a report should be submitted with an estimate of cost of drilling an additional 200 feet, when a decision can be made as to whether any further drilling should be done.

.....

-3-

In view of the opinions expressed in previous correspondence over a number of years regarding this matter, it need hardly be added that we are not optimistic about a water supply adequate to the needs of the school being found at a depth of even 600 or 800 feet. The existing circumstances and the heavy investment in the school buildings may however, warrant one more effort being made to secure a well with an adequate supply.

Ottawa,
December 31, 1943.

Memorandum:

DEPUTY MINISTER

Re: Water Supply, Sacred Heart Indian
Residential School, Brocket, Alberta.

The water supply at this school has again given out and it is necessary, as a temporary expedient, to haul water from the C.P.R. locomotive supply tank at Brocket, a distance of five miles.

The lack of water at this school has been a constant source of trouble for several years and the matter has been considered on several occasions by the field officers of the Surveys and Engineering Branch.

The Sacred Heart Residential School was erected in the fiscal year 1926-27 at an approximate cost of \$60,000.00. It has an authorized pupilage of 50. A report just received from Inspector Schmidt indicates that the population of the Peigan Band has increased in the last sixteen years from 382 to 551. The school population has increased in accordance with the total population. In 1942 Mr. Doucet carefully surveyed this reserve in order to ascertain if day schools were feasible. At that time he expressed the opinion that the Indians are not living sufficiently close together to enable the children to attend day schools. A report from Inspector Schmidt dated November 24, 1943, expresses the opinion that the operation of a day school would not be practical.

For your information I enclose the last report submitted to this Branch by the Surveys & Engineering Branch. We realize that it is purely a gamble whether we can secure water, but, on the other hand, we also feel

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

that the school must be kept in operation, if at all possible, and to do so a water supply is necessary.

I, therefore, recommend that we accept the suggestion made by the Surveys & Engineering Branch; namely, either drill a new well or deepen the present well known as No. 3. If water is not found by the time a depth of 600 feet is reached it is understood that the field officers of the Surveys & Engineering Branch will report back for further instructions. The expenditure involved will vary from \$2,200.00 to \$3,800.00. Funds to the amount stated are available in the appropriation for the current fiscal year and I feel that authority should be issued immediately to proceed with the work.

Acting Director.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Sacred Heart school appears to be due to the difference in the dip of the underlying bedrock at these two locations, as indicated by the change in the dip and strike symbols on the map. St. Cyprien school well is located near the centre or on the eastern slope of a small structural trough in which any water that would be derived from the higher ground to the west or south and migrated along the contact of the Porcupine Hills and underlying impervious formation would be stopped and would accumulate under hydrostatic pressure and thus be available to produce an adequate supply when tapped by wells. The wells at the Sacred Heart School, on the other hand, are located on the crest of a small anticlinal fold near the crest where there is little, if any, catchment area and where any water that enters along the contact of the two formations would concentrate down the slope. It is probable that it is this that gives rise to the small spring located in the water about one thousand feet southeast of the school. That the three wells drilled penetrated the contact entering water, there appears to be little chance of an adequate supply in the immediate underlying formation.

The underlying Willow Creek formation consists largely of soft red and variegated shales with a minor amount of red and grey sands, and sandy clays. The thickness of this formation is estimated to be approximately 1000 feet. Oldman River has cut a channel about 200 feet below the top of the formation and a certain amount of the river water may seep into it laterally, but due to the shaly and impervious nature of this formation this will be relatively small.

Underlying the Willow Creek formation is the St. Mary River formation of Upper Cretaceous age. It consists largely of alternating series of hard dark and grey coarse and thick sandstones with soft grey shales and sandy shales. It has an estimated thickness of approximately 2000 feet. The sandstone beds are much more porous, thicker and more extensive than are those of the overlying Willow Creek formation and the possibilities of their containing adequate water supplies are good. As shown in the structure section E-F, the formations form a pronounced syncline with the outcropping beds along the rim of the basin to the east, south and west lying at a considerably higher elevation than they do at the centre of the syncline. Moreover, the higher topographic belt in the Foothills area is crossed by many streams which provide abundant water for any reservoir beds. Water entering the formation from these outcrops will find its way toward the centre of the syncline and will be forced by the hydrostatic pressure to rise as high in the formation as possible. It appears therefore, that a good water-bearing horizon should be located at or near the top of the St. Mary River formation. Upward movement of the water will be stopped by the impervious nature of the shale beds of the overlying Willow Creek formation. If such a water-bearing horizon is penetrated by a well, the chances appear excellent that a good artesian water supply will be encountered, or at least the water will rise within the surface at the Sacred Heart school site. Any water from this horizon should be fresh and suitable for drinking.

It appears, therefore, that to tap an adequate supply of water at the Sacred Heart school, it will be necessary to drill to a depth of 1000 feet. It is possible that a satisfactory water supply will be encountered at a shallower depth, but the chances are large that the quality of the water from the top of the St. Mary River formation. The uppermost beds of the St. Mary River formation are warranted.

Yours very truly,
B.R. McKay, Geologist-in-Charge

OFFICE OF THE
DIRECTOR

CANADA
DEPARTMENT
OF
MINES AND RESOURCES

January 13th, 1944.

Dr. McGill:

Re: Water Supply, Sacred Heart Indian Residential
School, Peigan Indian Reserve, Brocket, Alberta.

This will confirm statements made in the course of our discussion in your office today, relative to the above, and with particular reference to the information and recommendations contained in the memorandum to me from Dr. B.R. MacKay, Geologist in charge, Ground Water and Boring Section, Mines and Geology Branch, dated January 8th, of which you were sent a copy.

In this connection I may say that our previous advice not to drill wells at this school much deeper than 300 feet was based upon the advice of Dr. MacKay's predecessor Mr. W.A. Johnston. The ground surface at this school is about 252 feet above the water surface of the Old Man river at its nearest point, and the bottoms of the several 300 foot wells at the school are therefore below the surface of the river.

In his memorandum Dr. MacKay explains the subsurface geological formations adjacent to the Peigan Indian Reserve in considerable detail. He also explains why a good supply of water is probably to be found in the St. Mary river formation at the location of this school, at a depth of 1200 feet, but not in formations at shallower depths.

In view of Dr. MacKay's statements, and of the fact that there seems to be no other source from which it is practicable to secure a supply of water, suitable for and adequate to the needs of this school, we would recommend that a well be drilled with a rotary drilling gear to a depth of approximately 1200 feet, into the uppermost beds of the St. Mary river formation, provided it is considered that the general policy with regard to the future operation of Indian schools on this reserve warrants the expense that will be involved.

(over)

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2.

While we have no definite estimates on the cost of a 1200 foot well it seems probable from figures that have been quoted for a 800 foot well that it would be from \$10,000 to \$13,000. We recommend a well drilled by means of a rotary drilling gear rather than by churn drilling, because the latter is not so suitable for deep wells. Two drillers in that area, who operate churn drilling equipment, were consulted recently and they would not undertake a well deeper than 300 feet. Mr. Joe Maughan, who has drilled the existing wells at the school with similar equipment, was unwilling to draw up an original contract for a well deeper than 600 feet. If a well was carried to that depth he would be willing to consider further drilling to perhaps 800 feet at a price to be mutually agreed upon providing the hole and his equipment were in shape to do so.

In our memorandum of December 28th last, we stated objections to rotary drilling for a shallower well than under consideration. These objections do not apply in the case of this proposed 1200 foot well for the following reasons: First, the objective is what is assumed to be a known water-bearing formation. Second, in this instance there would seem to be no danger of "mudding off" since as Dr. MacKay claims, the well will be of an artesian nature (he expects the water would rise to within 100 feet of the surface of the ground). This could result only from considerable pressure into the hole from the water-bearing formation at the 1200 foot level which would prevent the mud sealing off the water supply.

In addition to probably providing a water supply for the school, satisfactory in all respects, the drilling of such a well would provide geological information and information regarding the possibilities of water supply, which would be of much general value for the area adjacent to the school.

There is, of course, the possibility that a satisfactory supply may be reached before the well reaches a depth of 1200 feet, in which case it would be unnecessary to drill deeper than the level at which the water supply was reached.

It seems unlikely, however, that such a supply will be reached at any lesser depth than 1200 feet.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

3.

We cannot express an opinion at this time as to whether one of the existing wells could be made use of for the proposed new well. It would probably be necessary to pull the casing now in place and this might prove to be impossible. Moreover the size of the existing wells, under six inches, might be too small for a 1200 foot well. Experienced drillers can be consulted however on this point if it is decided to proceed with the 1200 foot well.

If it is decided, in view of all the circumstances that the expense of drilling such a well is warranted, we shall be glad to secure more definite information as to costs etc., and to make arrangements for the drilling and to supervise the work.

Memorandum:

DEPUTY MINISTER

I am in receipt of Mr. Pratt's memorandum of January 26 enclosing telegram received from Reverend H. Routhier, O.M.I., regarding the water supply at the Sacred Heart Indian Residential School on the Peigan Reserve near Brocket, Alberta.

In this connection I would refer you to my memorandum of January 21 enclosing copy of a report received from the Director of the Surveys & Engineering Branch, also copy of a report from Doctor R.B. MacKay of the Geological Survey Branch. These two reports outline very completely the possibility of securing the water which must be obtained if the residential school is to be kept in operation.

Officials of this Branch have carefully considered the possibility of making other arrangements for education on the Peigan Reserve. One of the officials of this Branch made a very complete survey of the reserve in 1942 and it was his definite opinion that the residential school should be continued in operation. His opinion in this regard is further supported by a report received from Inspector Schmidt dated November 24, 1943. I enclose this report and respectfully direct your attention to the paragraph on Page 2 reading as follows:

"The time has not yet arrived, nor are conditions -- financially, materially and otherwise -- such in this Agency that I could recommend the improved day school system for both boys and girls of this Agency."

Jan. 27/44

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

It is also interesting to note from other parts of the report the great scarcity of good drinking water on this reserve. If such is the case, the boring of a well equal in depth to the one now proposed by Doctor R.B. MacKay will have to be undertaken at an early date to meet the needs of the Indians, apart from the water necessary to supply the residential school.

After giving the matter very careful consideration it is felt that the only solution of the matter is to follow the advice given by Doctor MacKay and the Surveys & Engineering Branch and proceed at once with the digging of a well, in the hope that an adequate supply of good drinking water, which is so essential, may be secured.

Sacred Heart school,
Brocket, Alberta. Jan. 22, 1944.

Mr. J.T. Faunt, Indian Agent,
Indian Agency, Brocket, Alta.

Dear Mr Faunt:

On Reverend Father Crepeau's request I wish to submit to your consideration the enlargement of the Bakery which measures 12'4" X 7'3". The Oven takes 3'6" X 4'3", 5' high; the kneading trough 5'6" X 2' and the racks on which we put the pans to let the bread rise before baking it measure 3'1" X 1'6". When four girls stand by to knead the dough the place is so well packed that we cannot even open the door.

Last December the Sister & the girls who were taking care of the Bakery could not stand the work any longer. I took it over myself with a new girl, who in turn cannot stand the intense heat of the room more than an hour or so without nasal hemorrhage. The experience of the past years proves that the concentrated heat of that place together with the lack of ventilation affects everybody's system. Many sisters were requested to fill the position; each of them tried with the same result. One after the other they had to be changed and a few of them were ordered complete rest for several months, after being on duty for a short period. It seems to me that the situation could be improved by enlarging the room to double its actual dimensions.

I talked the matter over with our engineer who thinks it would be possible to dig the ground, level to the basement, at the back of the Bakery and there we could put the oven with the racks. The kneading trough only would be left in the former room. It would be necessary to build a cement foundation and a roof would be sufficient ~~xxxxxx~~ over the oven. The only window in the room could be used as a door, provided the wall below would be cut down three or four feet lower.

At present the oven is out of order. It will probably take a few weeks to repair it. Should we not take advantage of this opportunity to enlarge the room also and by this means, make it sanitary enough so that the employees may stand the work.

Hoping you will take this matter into consideration,
I remain

Very truly yours,

signed Sister Eva Marisette, Sup.

PLEASE QUOTE
FILE 2-44

Peigan Agency,
Brocket, Alberta. January 24th, 1944.

C. Pant. Schmidt Esq, Inspector of Indian Agencies, Calgary, Alta.

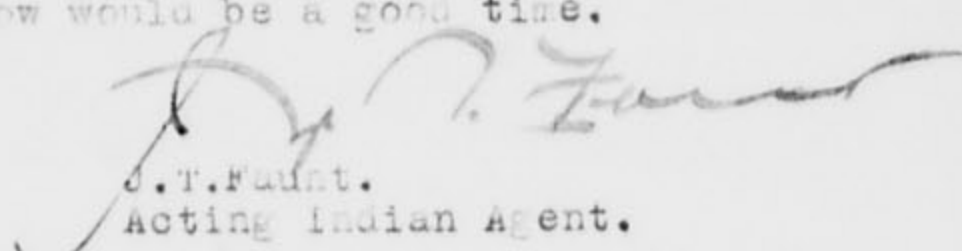

Enclosed herewith please find two copies of a letter I have received from the Sister Superior of Sacred Heart School in regard to the possible enlargement of the bake-room at the school.

The room is a kind of a hell hole alright & I have often wondered how they could stand the heat in such a small place.

What the Sister has in mind is cutting through the outside wall of the room & excavating on the outside sufficient space to allow of the erection of what would amount to a small lean-to, in which to house the oven & the racks.

I have not gone into the matter of cost, but I do not think it would amount to very much.

It could improve conditions if it were done & now that the oven is out of commission for a few weeks, if the Department would consider doing the work, now would be a good time.

INSPECTOR OF INDIAN AGENCIES

INDIAN AFFAIRS BRANCH

Calgary, January 27th, 1944.

Indian Affairs Branch, Dept. of Mines & Resources, Ottawa.

Re: Enlarging Bakery and Oven Room at the Sacred Heart Residential School, Peigan Agency.

I beg to enclose, herewith, a copy of a letter received from Mr. J. T. Faunt, Acting Indian Agent, Peigan Agency, attached to which is a letter, addressed to him by the Sister Superior of the school, which letter is approved by Rev. George Crepeau, the Principal.

The size of the present bakery room is said to be 12',4" x 7',3"; in this room are the kneading troughs, the setting racks and the oven; the room is too small. Therefore, a request is made that it be enlarged to double its actual size by constructing an addition to the present building.

I note, it is said, that the only window in the present room can be converted into a doorway to connect with a new addition. If this is done, what natural light will be left in the original room? Also, what ventilation and "Fresh Air" will there be?

I should like to have seen a plan or sketch of the proposed addition, also, some specifications and the approximate cost given. I doubt whether these have been prepared. However, rather than hold up the request for relief for what appears to be an unsatisfactory, (unsanitary) condition, I am forwarding the request, immediately, without this necessary information.

I would ask that a competent building carpenter check this place over and prepare; plans, specifications, list of materials required etc. and the approximate cost of both material and labour. I suggest that a request be made to the Parks Branch, to have one of their Engineer Architects from Waterton Lakes or Banff, Alberta, do this, and report on what he considers should or can be done to improve conditions.

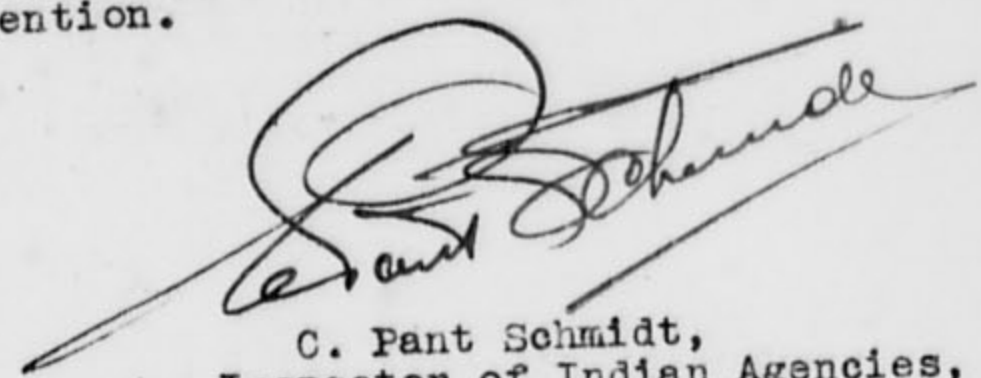

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

I appreciate the Sister Superior's anxiety in the matter as it regards, and may affect, the health of the other sisters and the girl pupils, who assist with the bread making.

I am not loosing sight of the fact the water supply at this school has not yet been remedied.

I beg to ask that these matters receive the Department's early attention.

C. Pant Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

Mr. C.P. Schmidt, Inspector of Indian Agencies,
Calgary, Alta.

I have your letter of the 27th instant,
with reference to a request that you have received
for enlarging the bakery and oven room at the
Sacred Heart Indian Residential School.

From the information contained in the
communications which you forward it is evident
that an enlargement of this room is necessary.
However, until the water situation is finally
settled I do not consider it advisable to submit
the matter for the approval of the higher officials.

In the meantime you might make further
inquiries with a view to ascertaining the approximate
cost of making the improvements necessary.

R.A. Hoey,
Supt. of Welfare & Training.

AIR MAIL.

Ottawa, 29th January, 1944.

Dear Father Routhier,

In Mr. Crerar's absence from Ottawa I am replying to your wire of the 25th instant with regard to the shortage of water at the Sacred Heart School in the Peigan Indian Reserve.

The delay in settling this matter has been unavoidable, and is due entirely to our efforts to arrive at some satisfactory solution. As you may know, \$3,000.00 or more has already been spent in the drilling and cleaning of wells at this site. Before authorizing additional expenditures we felt we should find out all we could about the underground water supply and consulted our Geological Survey. The officer in charge of the Ground Water and Boring Section is of the opinion that we should not start any drilling operations unless we are prepared to go down 1,200 ft. where a satisfactory water boring horizon might be expected. Water might be encountered at a shallower depth but the chances are not good, and of course there is always the possibility that water might not be struck even at 1,200 ft. We have not obtained an estimate on the cost of drilling a deep well but it would probably be in excess of \$10,000.00, and that amount of money is not now available. We do not want to have the school closed, and some doubt has been expressed as to the advisability of converting it into a day school at this stage. We would prefer having the present arrangement continued until after the war at least, provided some reasonably satisfactory temporary solution could be found. We are continuing to give thought to the matter and if you have any suggestions to make we will be glad to have them.

The reason why an adequate water supply was obtained at a shallower depth at the St. Cyprian school is explained as follows -

"St. Cyprian school well is located near the centre or on the eastern slope of a small structural trough in which any water that would be derived from the higher

ground to the west or south and migrated along the contact of the Porcupine Hills and underlying impervious formation would be stopped and would accumulate under hydrostatic pressure and thus be available to produce an adequate supply when tapped by wells. The wells at the Sacred Heart School, on the other hand, are located on the N.E. side of a small anticlinal fold near the crest where there would be little, if any, catchment area and where any water that might migrate along the contact of the two formations would continue northeast down the slope. It is probable that it is this migration that gives rise to the small spring located in the water course situated about one thousand feet southeast of the school building. In that the three wells drilled penetrated the contact without encountering water, there appears to be little chance of locating an adequate supply in the immediate underlying formation."

Yours sincerely,

C.W. Jackson,
Chief Executive Assistant.

BISHOP'S RESIDENCE
910 - 7A Street N. West
CALGARY - ALBERTA

February 10th, 1944..

C.W. Jackson,
Chief Executive Assistant,
Department of Mines and Resources,
Ottawa, Ontario.

Dear Sir:-

I have watched the struggle to obtain water for the 62 children and the 15 adults which has gone on at the R.C. Peigan Indian Reserve School, Brocket, Alberta (Sacred Heart School, Brocket), for the past number of months. Aside from the positive hardship endured by these 77 people on an isolated prairie, it is only good fortune that has not produced a catastrophe.

I am aware of the uncertain success of well-drilling as set forth by your engineer's department and by past experience in the vicinity of the school and I understand the prudence of the Indian Affairs Branch in refusing to spend money on a probability. I can only agree with this prudence. But this does not solve the plight of the present situation.

The good graces of the C.P.R., the open winter, and a few other fortunate circumstances have allowed the hauling of water a distance of nearly six miles (12 miles return). It requires three such trips a day, when the weather permits, and the work of one man and a truck for a full day. Often the necessary trips cannot be made, and it is not unusual that the tanks of water are frozen into ice when they reach the school. The good circumstances allowing even this hazardous supply of water exist only from day to day. Anyone familiar with prairie conditions in winter would realize how really precarious the situation is.

If the Indian Affairs Branch has decided that nothing of a permanent nature is to be done on the part of the Department at present, as it appears from your recent letter, could not some temporary relief be granted?

Last November, the Oblate Fathers decided from their consultation with local well-drillers that something could be done in well-drilling. On Dec. 15th they asked the permission of the Indian Affairs Branch to make the attempt at their own expense. That permission has not been granted. What objection has the Department to allowing it?

If

- 2 -

If this permission is not forthcoming and the present method must continue, it would seem that the Department should immediately make definite arrangements with the C.P.R. and provide a truck and a man to transport water from the Brocket station to the school, not only to release the school authorities from this work and allow them to do the work for which they are being paid but to insure the school of at least a sufficient supply of water.

I assure you of my wish to co-operate with the Indian Department. At the same time, I feel certain this matter demands immediate action.

Yours cordially,

'sgd' Francis P. Carroll.

Bishop of Calgary.

OFFICE OF THE
DEPUTY MINISTER

116-2-5
Copy for the information of -
Indian Affairs Branch.

Ottawa, 14th February, 1944.

Dear Bishop Carroll,-

On receipt of your letter of the 10th instant regarding water supply for the Sacred Heart School at Bocket, I asked the Indian Affairs Branch for information respecting the proposal which you said was submitted by the Oblate Fathers on December 15th. I find that a letter was received from Father Routhier on that date but it was not interpreted as suggesting that the Church would undertake the drilling of a well at its own expense. Father Routhier said -

"I would therefore request that the Oblate Fathers be authorized to hire a well driller as soon as possible to drill at the School to a depth of at least 700 feet if needs be. In the past, two wells at least were dug to a depth of 300 or a little more but in neither case have they found more than surface water. Mr. Bush offers to drill a well with a rotary equipment at a cost of \$4.50 per foot, and the cost of the casing would be approximately \$1.38 per foot. We are anxious that the work start as soon as possible, that is, not later than the 3rd of January, at which date Mr. Bush would be ready to start. The Oblate Fathers are ready to advance the money to start the work immediately and I do ask that there be no delay in giving an answer to my urgent request either by telegram or air mail to Edmonton."

If the Department is not expected to assume any portion of the cost of drilling, whether or not an adequate supply of good water is obtained, then we cannot very well raise serious objection. Is that what was proposed? Since that time our Geological Survey expressed the view that it would probably be necessary to drill down to around 1,200 ft. To provide for that possibility it might be necessary to start with a larger hole thus increasing the cost of drilling. How would this affect the offer of the Oblate Order if they intend bearing the cost of drilling for water? Perhaps you would be kind enough to let me know as soon as possible exactly what was proposed in Father Routhier's letter.

The Right Reverend Francis P. Carroll,
Bishop of Calgary,
910 - 7A Street N. West,
Calgary, Alberta.

.....

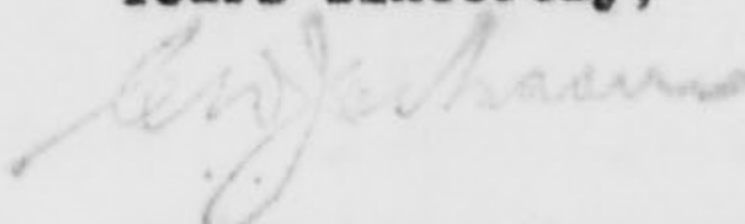

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

- 2 -

If all that Father Routhier had in mind was that the Oblate Order would advance money with which to start work expecting to be reimbursed by the Dominion, then that does not solve our problem and probably the only possible temporary solution is to try to reach some arrangement with the Canadian Pacific Railway and work out some mutually satisfactory scheme for the carting of the water until the end of the present academic year at least.

Yours sincerely,

Chief Executive Assistant.

MISSIONAIRES OBLATS DE MARIE IMMACULEE
ADMINISTRATION PROVINCIALE
9916 - 110e Rue
EDMONTON - ALBERTA

February 19, 1944

Mr. C.W. Jackson,
Department of Mines and Resources,
Ottawa, Ont.

Dear Mr. Jackson:

Your letter of January 29th reached me at the beginning of February. I frankly admit that I was keenly disappointed, and have the impression that we are striking against a stone wall with inadequate ammunition. Action and a will to solve the problem have been lacking.

In view of the consequences in case of fire, or the danger of an epidemic, I am giving orders to the Principal of the Sacred Heart School to begin drilling and to drill to a depth of 700 feet. This, we expect, will cost in the neighbourhood of \$5,000.00. Our resources do not allow us to go to 1200 feet. If the Department of Indian Affairs continues to remain as passive in this affair as in the past months, we shall bear the whole expense and have the school reimburse us if and when it can. If the Department sees that at least some of these obligations would rightly fall upon it, then we would appreciate any help whether in the drilling or the pump in case we strike water. If the Department is unwilling to help in any measure, we shall do all in our power to find a satisfactory solution, but I cannot imagine that such would be a permanent attitude.

With best wishes to yourself and trust the Department will understand my decision, I remain,

Sincerely,

H. Routhier O.M.I., Prov.

EXD.
A

Dear Father Routhier,

I have your letter of the 19th instant in answer to mine of the 29th January. I am afraid there is nothing I can add to my letter or to the one I wrote to Bishop Carroll on the 14th instant, which you have no doubt seen by this time.

I am sure you must appreciate the position of the Department. We have in the past authorized expenditures for the construction of wells on very meagre information and generally the results have been most disappointing. The officers in the Geological Survey are probably the best qualified people in Canada to advise in matters of this kind. To drill to the depth they recommended, the expense would have exceeded \$12,000. Apart from the fact that no funds had been provided in this year's estimates for the expenditure, it was felt that further consideration should be given to providing a temporary supply of water until the whole question could be thoroughly investigated.

We have noted that you now propose to drill a more shallow well at your own expense. It is to be hoped that you will find a satisfactory supply of water. You will no doubt advise the Department of the results of the experiment.

Yours very truly,

Chief Executive Assistant.

EXD.

MEMORANDUM:

To the Indian Affairs Branch, Dept. of Mines & Resources,
O T T A W A .

When at the Peigan Agency on the 15th instant, I called at the Sacred Heart (R.C.) School to enquire what progress was being made with the new well they had undertaken to sink, by drilling, near the main building.

The information I was given was that drilling had been started on April 9th, last, and work was stopped on June 9th -- at 250 feet -- for the reason that capable men could not be found to operate the machine.

The Reverend Principal could not tell me when work (drilling) would be resumed. He said he would re-open the school after the summer vacation; that he would take in fifty (50) pupils to begin with; that they would continue to haul water by truck and tank from the C.P.R. water tank at Brocket.

If the snow fall next winter is heavy, and it drifts, there will be times when the truck will not be able to make the trip.

For your information, please.

C. Pant. Schmidt,
Inspector of Indian Agencies,
Alberta Inspectorate.

The Secretary,
Indian Affairs Branch
Ottawa.

Attention: Mr. R.A. Hoey.

Dear Mr. Hoey,

You will be pleased to hear that the contractor in charge of the Sacred Heart School Well, Brocket, Alta., is again at work with a satisfactory crew of mechanics. The machine for boring has been repaired, and daily progress is being made. The well is now down to 285 feet and, whilst there is yet no indication of a good supply of water, high hopes are being entertained that when the natural level of surrounding wells has been reached water will be found in quantities large enough to supply all the needs of the school, even after it has been enlarged.

The Principal, in the letter in which he gives me the above information, refers to the abnormally low pupilage of his school and the consequent difficulties of financial management. Post-war Indian Affairs appropriations should take such cases into serious consideration and provide an adequate remedy. If such small schools are not enlarged to take about 100 children, an adjustment in the rate per pupil should be made. The present policy of the Department, whereby the larger schools are given larger grants might well be reversed, for it is admitted by those competent to judge that, financially speaking, the bigger schools can be operated for less per pupil than the smaller ones.

Yours very truly,

J. O. Flourd

I beg to acknowledge receipt of your
letter File 116-2-5 of the 19th September.

I have taken the matter up with Rev
G Crepeau Principal of the Sacred Heart R.C. School, regarding
the price he quoted to me. I find that this was taken from a
T Eaton Co Catalogue, and he is doubtful where it is obtainable.

He has advised me that the measurements he
gave me were in error and that all he will need is 72 Yds 2 Yards wide
or 144 Square Yards. As he is unable to quote any figures where
a supply would be insured; I would recommend the Department purchase
the Linoleum at the price quoted in your letter, and the colours of
red or Green are the choice he would like to have. He would also
like the cement required to lay it.

EXD.

Mr. A. McMillan, Indian Agent, Brocket, Alta.

An official of the Globelite Batteries Limited recently inspected the battery at the Sacred Heart Residential School and reports as follows:

"Using type GD13, 56 cell, 110 volt Globelite battery, serial number 9204. Battery in reasonably good condition, water level O.K. Although very dusty and dirty, due to location."

It is hoped that some action can be taken to keep dust and dirt from the battery.

EX'D
A

Indian Affairs Branch Dept of Mines & Resources. Ottawa.

I beg to advise that during the last two weeks I had a visit from the Father Provincial accompanied by Father Crepeau of the Sacred Heart School, when I was advised by them that the Well being drilled at that school was down to a depth of 594 feet without any success, and no sight of water; As the machine they were using could not go any further it was taken away.

Father Provincial advised me that they were holding a meeting of their Council, regarding another machine to go down to 1000 feet, and that when this was decided I would be advised of their decision, to date I have not received any further word. When advised I will write further regarding future arrangements.

Anthony McMillan
Indian Agent.

Ottawa, December 7, 1944.

Dear Sir:

I had an interview today with the Provincial of the Oblate Order with reference to the water situation at the Sacred Heart Residential School.

As you stated in your letter of the 25th ultimo, it was the intention of the Oblate Order to secure another well drilling machine and drill the present well deeper, in the hope of finding water. However, in the meantime they are experiencing considerable difficulty and expense in transporting water. It has therefore been decided to allow the school an amount of \$100.00 a month from April 1, 1944, towards the cost of transporting water. Please prepare and forward a voucher for the amount due at the rate stated for the period April 1 to December 31, 1944. For your guidance I enclose a sample of a voucher that can be used for this purpose. Subsequent vouchers should be forwarded at the end of each month.

Yours truly,

Encl.

Acting Director.

Mr. A. McMillan,
Indian Agent,

Brocket, Alta., Dec. 5, 1944.

REPORT ON PRIGAN AGENCY FOR MONTH OF NOVEMBER.

SCHOOLS

Schools were visited during the month and were found to be running smoothly. The drilling at the Sacred Heart School has been temporarily suspended, the machine there being unable to go farther than 600 feet. and they stopped work at 594 feet. With a visit from the Father Provincial it was learned that they intend to discuss the question at their council with the view of going deeper.

Anthony McMillan.

SHIP TO

Reverend G. Crepeau, O.M.I. - Principal,
Sacred Heart Indian Residential School, Brocket, Alberta.

Purpose for which required

QUANTITY		UNIT PRICE	TOTAL
1	- 2½ Ton Truck		
NOTE:- It is necessary to transport water to this school from a point 5 miles away. The school has been using its own truck but it is now worn out. We have had some correspondence with the War Assets Corporation, with regard to securing a water truck, but any equipment of this type that they have available at the present time is not suitable. To keep the school in operation it will be necessary to continue drawing water, as, although the school management has drilled a well, to a depth of 594 feet, an adequate water supply was not obtained. The management now advise that if they had a 2½ ton truck a suitable tank could be obtained and this would enable them to continue drawing the water that they require.			

I hereby certify that I have personal knowledge that all the above articles are required in the Department and for Departmental purposes only. The expenditure required by this requisition is strictly unavoidable and the public interest will suffer if it is not made.

Welfare & Training.

Schools.

Sacred Heart. This school has been running smoothly although handicapped owing to the water shortage. The well which was being drilled is still at a stand still, owing to the inability of the Church Authorities to locate a well drilling outfit which would go deeper; The present depth of the well is approximately 594 feet., and it will mean a much larger outfit to go any deeper, and it is the intention of the School Authorities I am advised to go to 1000 feet, and possible 1200 feet if necessary.

A few of the boys had to be moved to the hospital with slight attacks of Pneumonia, but at the time of this report have been returned to School in good health.

PLEASE QUOTE
FILE 57887-15-11

OTTAWA April 10th, 1945.

Memorandum:

Mr. R.A. Hoey.

With reference to your requisition of April 3rd, for the purchase of a 2½-ton truck to be used in transporting water to the Sacred Heart Indian Residential School, at Brocket, Alberta, before requesting tenders it is necessary to know what wheelbase is required and if dual rear wheels are necessary. You might also advise as to the approximate dimensions of the water tank and the cost of same and if it is the intention to turn in the old truck on the purchase of a new one.

I am enclosing copies of Form M. & S. 1595, which have to be filled out in order to secure a permit. When these forms are returned, and the above information supplied, steps will be taken to secure a suitable truck.

Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ont.

I have yours of the 10th instant, regarding the truck which it is your intention to purchase for the Sacred Heart Indian Residential School, Brocket, Alberta.

As far as the tank is concerned, the Ottawa Boiler Works, of Ottawa, agree to supply same for \$160.80, tax included, and the freight from Ottawa to Brocket would be \$42.00. This tank would have a capacity of 700 gallons and would be of a size suitable for the needs of the school, as it would be sufficient to make four trips per day to secure the necessary water supply. The above tank would be oval in shape, 5 ft. in diameter and 3 ft. in height, 9 ft. in length and would weigh about 800 lbs. It would be made of galvanized iron, Gauge No. 10. The tank will be provided with a manhole on top and a 3" outlet at the rear end.

Yours very truly,

Yours very truly,
J O Burde
JMB

Ottawa, April 18, 1945.

Memorandum:

DEPARTMENTAL PURCHASING AGENT.

I desire to refer to your memorandum of April 10, (File 57687-15-11) with reference to our requisition of April 3 for a 2½ ton truck to be used for transporting water to the Sacred Heart Indian Residential School.

On receipt of your memorandum we consulted the school management and we are now advised that an International Harvester Company Model K-5, 2-ton truck, with wheel base of 159", has a gross carrying capacity of 14,500 lbs. This truck, or equal, would perform the work of hauling water for the Brocket School very satisfactorily. We have, therefore, completed the Application for Permit, based on this information.

MP
A suitable water tank can be obtained from the Ottawa Boiler Works, Ottawa, at a cost of \$160.80, tax included, and the freight on same from Ottawa to Brocket will be approximately \$42.00. This tank would have a capacity of 700 gallons and would be a size suitable for the needs of the school. The tank would be oval in shape, 5 ft. in diameter, 3 ft. in height, 9 ft. in length and would weigh about 800 lbs. It would be made of galvanized iron gauge No. 10. There would be a manhole on top and a 3 inch outlet at the rear end. The price just mentioned would include not only the tank but the sleepers, apron and "U" bars required to hold the tank in proper position on the truck.

It is not the intention to turn in the old truck, as it is owned by the school management and can be used for minor work in connection with their farming operations.

As intimated in our requisition of April 3, it

p.t.o.

Schools. (Sacred Heart)

During this quarter arrangements have been made by the School Authorities to have three or four shallow wells drilled around the school with a view to increasing the flow of water into the School. I am sorry to report that to date this has not proved satisfactory.

On June 17th Closing Exercises were held at this School, with Inspector Schmidt and myself in attendance. Prizes were presented and short Programme of songs and speeches. The School children appeared to be very well taken care of and gave a very good impression to those present.

The School closed June 20th at this School to allow the Principal and Sisters the opportunity to go to the Centenary of the Oblate Fathers at St. Boniface.

AIR MAIL

Ottawa, August 3rd, 1945.

Dear Father Crepeau:

As you are aware we have been endeavouring to secure a truck and tank for carrying water to your school. We have been unable to secure one without cost.

I have now been advised by the Minister's office that the Department will allow an amount of \$1000.00 towards the cost of a truck and tank provided the purchase is made by the school management and any cost over and above our contribution is paid from the school funds.

If you are willing to accept this offer you may proceed at once to purchase the truck and tank. When you have paid for them you should forward a receipted account to this office and a cheque for \$1000.00 will then be forwarded to you.

I am forwarding a copy of this letter to Reverend Father Plourde who has been interested in securing the equipment mentioned in the first paragraph of your letter.

Yours truly,

Rev. G. Crepeau, O.M.I.

Re: Sacred Heart Indian Residential School - Peigan
Agency.

I beg to report briefly on the condition of the
buildings at this School:

Owing to the fact that there has been no proper
water supply at this School, the water from the deep well
being insufficient, and several attempts to sink new wells
having been unsuccessful, it became necessary to haul water
by tank and truck from the C.P.R. locomotive supply tank at
Brockton -- a distance of five miles, or 10 miles for the
return trip. This arrangement being unsatisfactory and quite
expensive, there was some doubt prevailing as to whether this
institution could carry on as a residential school on the
present site (location). Also, there being several children
of school age not in school because of lack of room, and the
question of building an addition having been set back on
account of the lack of water, the suggestion of asking that
the building be moved to another location, was expressed in
some quarters. Because of all this, only very necessary re-
pairs were done to the buildings, and no exterior painting
has been done for several years.

During the month of August this year, a sixth attempt
to sink a new well was made on a new location, 700 feet South-
west of the main building. Water was found at approximately
300 feet, and two tests were made -- one of 12 hours' duration
gave 10 gallons per minute without lowering the depth of the
water in the casing. The Principal will have an underground
pipe-line laid to connect this well with the School pressure
tanks, as soon as he can get help (labour) to do the digging.
The Indians are now busy working at harvesting. He expects to
have this completed early in October.

If, when this is done, the water supply is satisfactory,
we will check up on all necessary repairs, and the painting of
the exterior of all buildings. The main school building will
require three coats of oil paint, as the lumber is showing signs
of checking, and needs a good oil filler. The barn and outbuild-
ings require two coats of red barn oil paint. Owing to the
lateness of the season, it may not be possible to do the paint-
ing this Autumn; however, I would ask that the material --
paint, oil and brushes -- be purchased from this year's appro-
priation, and delivered at the School, the work to be done
when the fine weather comes in April or May.

Brocket Alta.
September 25th 1945.

C.P. Schmidt Esqr Inspector of Indian Agencies Calgary.

I beg to acknowledge receipt of your
letter of the 17th inst File 406-11A C.E.

On my return from Calgary I had Mr Pearson
go out and clean out the two tanks, and made two trips to the
School while this was being done, the tanks were very badly plug-
ged with sand and mud, but a good job was made of the cleaning out.

The water after the clean out had been made
was much clearer, and getting clearer every day, and Both the
Plumber and myself are satisfied that the dirty water was caused
from the sand and mud in the tanks being riled every time the
Pump was working.

The Blow nipple on the Tank has been
repaired, and the cleaning out of the Tanks should be able to be
done without any trouble from now on by the Engineer.

Mr Pearson advises me that when he sends in his
his account he will make a report on the Tanks, and what was found
when the work was done.

RE: Brocket Indian Residential School.

Attention: Mr. Phelan.

My dear Mr. Phelan:

I had the occasion, a few weeks ago, to visit the above school and I hereby submit a list of requirements badly needed to make its operation possible with the small pupilage which it is authorized to receive.

- 10- The building which is of frame construction has not been painted for over 10 years and looks the part. This is something which must be done next spring.
- 20- The floors in the boys dormitory are too far gone for repair and must be totally replaced.
- 30- ① The hot water tank has been repaired on several occasions and is, at the present time, in such bad condition that a new one is necessary.
- 40- ② The batteries, which are 7 years old, are in poor condition and must be replaced this year. They were installed in 1939.
- 50- ③ The laundry was never properly supplied with machinery and the need for an upright steam boiler is essential and should be supplied immediately.

Besides the above there are two other points

2.....

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

to which I must call your attention:

February 21
10- The school was built for 50 pupils, it has now 70 and will continue to have, at least that many as the Reserve is rapidly increasing in number. For instance, last year, 1944, there were 25 births and only one death. This year, 1945, up to September the 25th, there were 20 births, and if I am well informed, no deaths. To take care of the demands for admission, the present pupilage of the school should be at least 90, but as it will be impossible to house that number, the Principal is now asking for a pupilage of 70.

20- The School should be enlarged immediately. We would suggest the building of a wing on the west side of the present building to provide accommodation for the girls; a Chapel could be erected over the present kitchen and laundry: the present Chapel cannot accommodate more than the 70 children which the Principal is now asking for.

The above is a comprehensive program and your Department will, no doubt, wish that an inspection of the school be made immediately to verify the statements which I have just formulated. This inspection is now invited and the hope is expressed that it will take place without delay.

In the past, the water question for the school seems to have been in the way, whenever major repairs were asked for, but now that it has been settled and that a good water supply has been found, we cannot see why your Department should not give this school what it has generously provided for similar institutions.

Very truly yours,

J.O. Plourde

J.O. Plourde, O.M.I.

File: 116-2-5

Ottawa, 31st October, 1945.

Mr. A. McMillan, Indian Agent, Brocket, Alberta.

With reference to the Sacred Heart Indian Residential School, I am advised that the following improvements are required immediately:

- PP*
- (1) The hot water tank has been repaired on several occasions and is, at the present time, in such bad condition that a new one is necessary.
 - (2) The batteries, which are 7 years old, are in poor condition and must be replaced this year. They were installed in 1939.
 - (3) The laundry was never properly supplied with machinery and the need for an upright steam boiler is essential and should be supplied immediately.

Please let me know your ideas regarding the necessity for making the above replacements. In view of your recommending the replacements mentioned above, you should supply full particulars regarding the type and size of equipment required in each case.

RE: Brocket Indian Residential School.

Attention: Mr. Phelan.

My dear Mr. Phelan:

I am enclosing two (2) small accounts from the Brocket School, one for seven beds and the other for fifteen school desks. They have both been paid and certified.

Will you be good enough to forward the cheques to the Reverend Principal Father Crepeau.

Thanking you in anticipation, I remain,

Yours very truly,

J.O. Plourde

Ottawa, 2nd November, 1945.

Memorandum:

DEPARTMENTAL PURCHASING AGENT

I attach account amounting to \$146.10 covering cost of desks purchased by the Principal of the Sacred Heart Indian Residential School. There was such a heavy enrolment at this school at the 1st September, more desks were urgently needed in order to accommodate pupils and the Principal purchased some locally. I would appreciate it if you would issue Purchase Order so the account may be paid. The coding is as follows: 759-76-12-415.

Memorandum to:

Mr. [redacted] under,
General Executive Asst.
Surveyor General Engineering
Cartier Bldg.,

...

Re: Possibility of securing an adequate water supply at Sacred Heart Residential School in Peigan Indian Reserve No. 147, located in S.W. 1/4 Section 7, Township 7, Range 27, West of the 4th Meridian, six miles east and one mile south of village of Brocket, Alberta.

The Geological Survey has on file very little information pertaining to the underground water resources of the Peigan Indian Reserve, as no systematic water survey has been made of this part of Alberta. The geological mapping to date in this Agency has been of a reconnaissance character for the compilation of the Calgary Sheet, Map 204A published on a scale of 1" = 8 miles. A copy of this map with accompanying sheet of structure sections, is submitted herewith.

It appears that there are two residential schools located in this reserve, one the St. Cryprian Residential School, located near the southwest corner of Section 34, Tp. 6, Range 27, and the Sacred Heart Residential School, located in the southeast quarter, Section 7, Tp. 7, Range 27, west of the 4th Meridian. A well sunk to an unstated depth at the St. Cryprian School is said to be supplying an adequate amount of water for school purposes, whereas three wells drilled at the Sacred Heart School to a depth of about 300 feet encountered only a small supply of water, inadequate for school purposes. These latter wells are located at an elevation of about 3600 feet for about 250 feet above the level of Oldman River and reach to a depth of about 50 feet below the river.

On the geological map referred to above, are shown the boundary of the Peigan Indian Reserve, the position of the two residential schools, the approximate boundaries of the several outcropping geological formations and symbols showing the dip and strike of the rock at a few localities. The subsurface structure of the underlying formations in the vicinity of Peigan Agency is diagrammatically portrayed on the left or west end of structure Section E-F of the accompanying structure section sheet in the area enclosed by the rectangle indicated by pencil.

It will be noted on referring to the map, the map legend and Structure Section E-F that the residential schools are located in an area underlain by the Porcupine Hills formation (20) of Tertiary age, and that this formation is underlain by the Willow Creek Formation (19) also of Tertiary age, that is exposed along the valley of Oldman River. The Porcupine Hills formation is mainly of fine and coarse-grained, cross-bedded sandstones, with interbedded sandy clays and has a total thickness of about 2500 feet. Within this part of the reserve, however, the thickness of the formation is confined to the lowermost 200 feet. The formation contains several good water-bearing horizons, but the relatively small area underlain by these beds in this part of the reserve eliminates any water possibilities at the two schools is believed to be derived from a porous sandstone horizon near the base of the formation or at the contact between it and the underlying shale formation. The reason why a good water supply is being secured at the St. Cryprian school and very little at the

Welfare and Training

Schools

Sacred Heart. This school reopened on September 4th with the majority of the pupils returning on time. There were 56 pupils in attendance when I visited the School.

The new well drilled some distance from the school buildings this summer hit water at 100 feet and the well was put down to 300 feet.

The trench dug from the well to the pressure tank at the school is close to completion, as is the small building being placed over the well and pump.

The engine is awaiting a few parts and the Principal advises me that with good weather they should be hooked up with the new well early in October; if this happens the Voucher for \$100.00 allowed for assistance in hauling water will be dispensed with, however if the connections are not completed it may be necessary to Voucher for another month, I will stop any further Voucher for this purpose as soon as the work is completed.

Indian Affairs Branch Dept of Mines & Resources Ottawa.

Attention Mr Phelan.

I beg to acknowledge receipt of your letter File 116-2-5 of the 31st ult, and the following is my opinion of the questions which you ask.

1. Hot Water Tank. This Tank certainly needs replacement and has been on the Estimates for the past two years. The quotation received from the Plumber is for a 84" x 36" Hot Water Tank with all fittings and and a Heating Coil for \$316.00; Installation of same was quoted at \$125.00 if he provides the Tank otherwise he wishes to make another bid on installation if provided otherwise.
2. Batteries. I have just been advised by the Globelite Battery Company who inspected these batteries recently, that they were bought in 1940, and are good for one or two years use. I would there fore leave this item over till next year for consideration.
3. Laundry Equipment. The plumber quoted on this item which is badly needed, a 92 Imperial Galon Tank and stand at 70.00; Jacket Heater for Heating same \$45.00 and installation with pipe fittings and valve and Dabor at 50.00 making a total of \$165.00 for this item.

The plumber who gave me the above figures is Mr Stanley Pearson Pincher Creek. I would recommend the work in No 1 and No 3 Be done as soon as possible if funds available.

DEC 17 1945

Indian Affairs Branch Dept of Mines & Resources Ottawa.

(Attention Mr. Phelan.)

I beg to acknowledge receipt of your letter File 116-2-5 of the 4th inst regarding the water situation at the Sacred Heart Indian Residential School and beg to report as follows.

Depth of Well. This well was drilled to the depth of 300 feet when they got a plentiful supply of water running for 12 Hours at the rate of 10 Gallons per minute.

Gallons of Water (Per Day) On the basis of the pumping to date this well should give an approximate gallonage of 15000 per day

Indications for water supply Water seems to be plentiful but has only been running for 2 days, and is a little early to give an opinion as to permanency, but with the present rate during pumping and the tests when drilling was completed, it would seem that the School will have a plentiful supply of water.

General Comments. This well which is the seventh well drilled during their effort to get water is situated 700 feet from the Tanks at the School; it is connected with the tanks with a 2" Pipe which runs into the pressure Tanks; from there a 1" Pipe connects the tanks 500 feet away with water. A shelter has been built over the Pump head and closez in the pump from the weather, this well sits up on the side of the hill to the South West of the School, and is on the level of the second floor of the School not counting the basement. The well is run by a gas engine, attached to the Pump which used to used when the well in the school was running. The slope from the well is very good fall for the water. This well is situated on the S W 1/4 of 7-7-27 west 4th. Approximately \$7500.00 was spent getting water.

After this well has had a good trial I will make a further report as to the capacity, and manner in which the well is working.

Attention Mr Phelan.

I beg to acknowledge receipt of your Letter File 116-2-5 of the 4th inst regarding the upright steam Boiler at the Sacred Heart Indian Residential School.

I discussed this with the Principal, and also with Mr Pearson, the Plumber, since receiving your last letter, Mr Pearson and I figured this was for heating water for the Laundry separate. However in discussing the matter with the Principal, and the brother who is Engineer, it seems that Father J.O. Plourde and th Brother have in mind placing all the water tanks on a steam basis, including the large hot water Tank under the heading of No 1 on your previous letter.

Mr Pearson does not think this is practical, and would necessitate an Engineer with papers to run same.

As Father Crepeau and myself are at a loss to know exactly what is wanted by the present Engineer and placed before Father Plourde, would it not be advisable for Father Plourde to place his wishes before you and have a steam Engineer advise as to the class of equipment needed, when I could go ahead and get bids.

Mr Pearson has stated that he was in error on the 92 Gallon Tank it should have been 250, but as this does not seem to be the type wanted, I will await further information before getting any further bids.

Mr. R.A. Hoey,
Director,
Indian Affairs Branch,
OTTAWA.--.

RE:- New Well for the Brocket School.

My dear Mr. Hoey:-

The persevering efforts of the Principal of the Brocket school, in securing an ample water supply for his school, have at last been rewarded, if I must judge from several letters which he has written to me during the last few months. In his last communication he definitely states that the new well can supply 15,000 gallons of water per day. A pump house has been erected, about seven hundred feet of 2" pipe layed from it to the pressure tanks in the basement of the school and the barn has also been connected with a 1" pipe.

The digging of the well, the erection of the pump house, the laying of pipes to connect the new well with the pressure boiler and the barn, have naturally cost a large amount, and the Principal is now expecting the Department to reimburse him. I am informed that close to \$7,000.00 have been spent on the project, which is considered fairly reasonable when the number of wells dug before striking water is taken into consideration. We are prepared to supply invoices for work and materials.

I would, therefore, be very much obliged if you would give this matter your early consideration.

Yours very truly,

J.O. Plourde

Mr A Mc Millan Indian Agent.
Rev Father Crepeau O.M.I. Principal
Charles Middleton Esqr Acting Principal.

Sir,—

Gentlemen;—

With Members of the Brocket Local of the Indian Association of Alberta will like to take this opportunity to discuss all matters concerning the Two Residential Schools on the Peigan Reserve, and with your co-operation, would like to have all matters arrange and settle.

We have made a thorough investigation of this Schools with the approval of Mr Mc Millan and the Principals of the said Schools and have seen and learn the needs and dangerous condition our children are subjected to.

In the case of the R C School it simply cannot stand up to the winds we have on this Reserve.

Some years ago this School was supported by two Iron rods on the second floor crosswise. One rod was on the West end of the Building, and the other on the East end. Under present conditions it is worse off than it was before.

In the boys Dormitory for instance, on windy nights they have to hold their beds to prevent them from banging together.

In the girls dormitory which is on the West end the Building, the smaller girls are awoken from their sleep and start crying for fear the building will blow over.

Another proof is that this building is unfit for occupation that is the roof leaks when it rains and when the snow is melting.

Another instance, In case fire should break out on the West end of the School which occupied by the girls, how are they going to escape the fire, as the stairways are on the same West end, and without another means of escaping thro, theres no door connecting both dormitories and then, supposing fire breaks out on the East end which is the boys side, now where are they going to get out to the West side.

The Girls playroom which is 15 X 40 has no sunshine and poor ventilation and is absolutely unfit for them, and also the rest rooms are annoying for their health of these girls of 40 who are squeezed in this room.

We it resolved that this complaints brought up are also concerning to the St Cyprians School but do not know whether the beds in the dormitory bang together but is as dangerous too.

So far all these dangerous conditions we ask with a confident heart that you would help us with our urgent plea in where we are sacrificing our most beloved children for whom we would be only too thankful for any assistance done for their safety.

You may never understand our worries which us parents undertake when these high winds start especially at night. Now our wish is that we should take them home for safety, till these buildings are guaranteed safe. We also ask that an immediate action be given the sooner the better, or give new Schools.

Yours.

Indian Association of Alberta.

Indian Affairs Branch Dept of Mines & Resources Ottawa.

I beg to enclose herewith a Copy of Letter received from Bob Crow Eagle signed Indian Alberta Association, I was requested by Bob Crow Eagle previously for permission for him and three men to visit the Schools, in the cases of the Sacred Heart School, (R.C.) with three Catholics, and in the case of St Cypriane School with three Anglicans, all Members of the Association.

As will be noted the bulk of the letter is an exaggeration of the stories told by the children, the wind blows here and no mistake about it, but the only effect is the shaking of the beds, and I have never heard of anything moving around. The roofs of the Schools leak slightly in severe heavy rains, and with Moccasin telegraph, and some rather crude statements made over the radio of high winds up to 100 miles per hour the Indians have worked themselves up over the possibility of the schools collapsing, and asked for their removal till the storm was over. This was not done.

However the remark re the Girl's Dormitory is worthy of attention, if a fire started in the West end of the School and came up the stairway, which adjoins the Fire Escape, there is only a Blank solid wall between this room and the rest of the School, which would leave a trap. Plans of either school will show this. It might be possible to place a door thorough into the Matrons room which would give an exit from the dormitory into the main part of the School if necessary, I feel that this point plus the question of more light and ventilation, could be thoroughly checked this summer, if expert crews are available when the Post War Project is looked into.

Further discussion at the meeting, re Loans have not been completed, and will be discussed

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

discussed at a later meeting.

This is the result of the first meeting I have had with the Indian Association of Alberta, and they've carried their business through in a very nice manner.

I will be glad of your opinion on the matters mentioned in their letter, and possibly I may have your viewpoint as to whether I will advise them that the subject matter is receiving attention, and will be considered in the future.

SCHOOLS

*Sacred Heart

This school has been running very smoothly and during December this School were able to complete there connections with their new well, and to date they are getting all the water they need, with their equipment functioning without trouble.

During this quarter this school was advised regarding the payment of grant on pupils, and are now bringing their students up to this number.

At Xmas the Children put on a concert during the festive season, but with severe weather and drifted roads I was unable to attend.

AIRMAIL

Ottawa, April 16, 1946.

Mr. A. McMillan, Indian Agent,
Brockton, Alberta.

Re: Purchase Order No. 7106.

The above order was placed several months ago, for a hot water tank for the Sacred Heart School. In the last paragraph of my letter of January 8, 1946, I asked you if it had been installed. No reply has been received nor has the account reached us.

If this tank has been installed, the account should be certified and forwarded immediately, and the account should be dated previous to March 31, as we are holding funds for its payment. If the tank has not been installed, please let me know the approximate date when it will be delivered to the school. Please reply by Air Mail.

I beg to acknowledge receipt of your
Air Mail Letter of the 16th inst File 116-2-5, re the installing
of the Hot Water Tank at the Sacred Heart School.

I have kept in Contact with Mr Pearson
since authprity was granted, and was advised him on the 17th inst
that he had received word from the Manufacturers, and showed me the
letter, this Hot water Tank with attachments will not be available
till the end of June or the beginning of July at the earliest and
he advised me the minute it arrived it would be installed.

May I have your instructions on this
matter as this Tank will not be available to pass for payment till
the above mentioned time at the earliest.

INDIAN AGENT'S OFFICE

Peigan Indian Agency

Brocket Aug 9th 1946

IN YOUR REPLY REFER TO
No. 2-46
ALSO
TO DATE OF THIS LETTER

Sir,—

I beg to advise that I have been able to get a rough Estimate from the Sacred Heart School their requirements for the Fiscal Year 1946-47.

In this connection I have been advised by the Inspectors Office at Calgary that the amount allowed for each School went forward in Departmental Letter 600170 dated July 3rd. I have not received this letter, the only one showing the amount of Estimates allowed is Dept Letter File 600172 showing estimates for the Agency Buildings.

I therefore am enclosing below the approximate requirements of the Sacred Heart School, and would be glad to be advised the amount allowed; The possible repairs in order to be done this year are as follows.

1st of All the question of the Hot water Tank for which money was being held from last years estimates which is available now but the Copper Coil is still not available. This was quoted as approximately \$441.00.

For this Year.

1. Hardwood floor for the boys dormitory 36'x 30'2" and the putting down of the new floor. This would run around \$400.00.
2. Repair of the School roof where it is leaking and also the annex, where it is also leaking. \$100.00
3. 15 Yards of linoleum 4 yds wide light Color, Inlaid.
12 Yards of Inlaid Linoleum 1 Yard wide light color.
- 5 1 Teachers desk with a set of drawers both ends.
6. 1 Typewriter. *no*
7. 125 Woolen Blankets to replace those now in use, which are rapidly wearing out. *W. 2 R. Plunk*

This is the most I have quoted out of the articles asked, and I will be glad to receive from the Branch the total amount of funds asked for and allowed, so that I may make the necessary requisitions.

In giving this list all the way through the principals letter, quoting the necessary requirements, they bring out the matter of the building of a new School, quoting the number of possible pupils as 80. with accommodation for 63, and that means the use of the Sisters Dormitory.

Anthony McMillan
Indian Agent.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Ottawa, August 16, 1946.

Mr. A. McMillan, Indian Agent,
Brocket, Alberta.

With reference to your letter of the 9th instant, regarding the Sacred Heart Indian Residential School, the following expenditures are approved:-

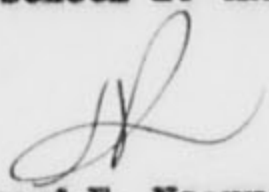

- | | | |
|--|-------|----------|
| 1. Material and labour for new floor
in Boys' dormitory | | \$400.00 |
| 2. Repair of school roof where
it is leaking | | 100.00 |

We will request our Purchasing Branch to secure linoleum and a teacher's desk. A typewriter is not available.

Blankets are not supplied by the Department, but if the Principal writes to the Ottawa representative of the Oblate Order, namely, Reverend J. O. Plourde, O.M.I., the latter can secure blankets at a reasonable cost from the War Assets Corporation.

It is noted that the school has not yet received the hot water tank which was ordered from Stanley Pearson.

With reference to the last paragraph of your letter, it is not possible to consider enlarging the school at the present time.

Bernard F. Neary,
Supt. of Welfare & Training.

Memorandum

Indian Affairs Branch

Re linoleum for Sacred Heart Indian Residential
School - I.A.B. File 116-2-5

We endeavoured to secure from our usual wholesale sources of supply at Calgary, prices and promise of delivery on the 50 lineal yards linoleum called for on your requisition of the 16th ultimo, but without success. If Acting Inspector Gooderham can purchase the light coloured linoleum locally, it will be in order for him to arrange accordingly.

Departmental Purchasing Agent.

Ottawa, September 5, 1946.

Mr. A. MacMillan, Indian Agent, Brocket, Alberta.

With reference to your letter of the 9th ultimo, the Departmental Purchasing Agent advised that they have endeavoured to obtain from their usual source of supply in Calgary a price and a promise of delivery of the twenty-seven yards of light coloured linoleum requested for the Sacred Heart Residential School but have not been successful.

If either Acting Inspector Gooderham or yourself can purchase this locally you may do so.

Bernard F. Neary,
Supt. of Welfare & Training.

Re: Extension of Sacred Heart School, Brocket.
Attention: Mr. P. Phelan.

My dear Mr. Phelan:

I am in receipt of a letter from Reverend Father Georges Grépeau, O.M.I., Principal of the above school, in which he again requests the Department to consider favourably an extension of his school. A considerable number of children will have to be refused again this year, because the school is too small.

The building of a wing 60 by 36, on the north side of the school would answer the present needs for at least five or six years to come. The estimates would round between 18 or 20,000 dollars and I hope that you will be able to have this included in the 1946-1947 budget.

Very truly yours,

J. O. Plourde, O.M.I.

Ottawa, September 10, 1946.

Dear Father Plourde:

I have your letter of the 5th instant, in which you point out the necessity of providing an additional wing at the Sacred Heart Residential School. It is noted that you estimate its cost between eighteen and twenty thousand dollars.

This request will receive further consideration when we are preparing our appropriation for the fiscal year 1947-48.

Yours sincerely,

Bernard F. Neary,
Supt. of Welfare & Training.

I beg to acknowledge receipt of your
letter of the 25th ult, File 116-2-5(WT1).

I have been in contact with the Plumber
here and he advises me that the only reason for non delivery has been
the question of waiting for the copper coil which heats the Tank.
As this is only caused through the ~~xxxxxx~~ copper being frozen,
he suggests that we put the tank in and await the coil. The water
could be heated by a jacket heater temporary.

If the Branch can get the release of
this copper coil and I could have a priority, for it the Tank could
be installed.

IN YOUR REPLY REFER TO
No. 2-46
ALSO
TO DATE OF THIS LETTER

Indian Affairs Branch Dept of Mines & Resources
Ottawa.

Sir,—

I beg to advise that for the past month I have been in close touch with the Sacred Heart School Principal, re the condition of the well.

It is causing a considerable amount of worry and I wish to place before the Branch what I have done to date, one month ago and previous I had regular visits from the Principal regarding the inability to get sufficient water, and that they were hauling water from the C.P.R. I immediately had an emergency check up made on the well, and the well driller found 17 links of a cow chain in the well and a new cylinder had to be put in this voucher is going forward, and is \$125.00 also the original estimate was \$200.00. The well ran very well for a few days after the chain had been removed, but has now fallen down in the quantity pumped.

Position of Well now.

It would seem that this well is now pumping far short of sufficient water to carry the School, and the Truck and tank has to be brought into use. During the severe snowstorm of the last ten days when the roads were impassable, and the shortage of water was acute, I along with the Principal took it upon ourselves to let the children out from Friday evening November 1st to Sunday evening November 3rd, to allow the well to catch up, and also give time for the truck to haul water for the following days, the Principal feels that instead of a flow at the bottom of the well, we are drawing from an underground lake, which has to fill up before the next pumping; I am in a quandry as to what is the correct way to handle this question, and am writing to see if the Branch concurs in the week end for the children, and also the payment as was done last year of an allowance of \$100.00 per month. This will liable to be a long drawn out payment as, as I see it now I do not hold out much hope for any increase in supply from the well;

I would like the Branch's advice and comment on this matter, so that if at any time this school is unable to keep a satisfactory supply of water. I may know what action to take re the children if there is any possibility of an outbreak from the shortage of water, and inability to flush the toilets.

AIRMAIL

Ottawa, 13 November 1946.

Mr. A. McMillan, Indian Agent,
BROCKET, Alta.

We have your letter of the 5th instant and regret to learn that the water situation at the Sacred Heart Residential School is unsatisfactory.

In view of the contents of your letter, the following procedure is approved:-

1. While the water shortage continues, the children may be allowed home on Friday evening and return to the school on Sunday evening. It should be distinctly understood by all parties concerned that this is only a temporary arrangement and if the water situation improves, the children should remain in the school. You will realize that in spite of the fact that this is an unusual situation, it will quite possibly encourage other schools to request the privilege of allowing the children home for weekends which is a practice that the Department has never approved.
2. For the period that it is necessary to draw water, we will allow the same amount as last year for the services of the driver, namely \$100. a month.

Mr. M^o Millin
Indian Agent Peigan Reserve
Brookfield Alberta.

Oct 13 - 1946
Lethbridge Alberta.
Box 566 Phone 91-4132

Dear Sir.

We have completed the work at the well
at the Sacred Heart school.

In pulling the rods & 287 ft of 3 inch
pump pipe which is in good shape, ^{the pump pipe.} we found
17 pieces of halter chain lodged in & around the
Bottom check valve which made it impossible to
pump or check the lift of the water. New wood rods
should be put in the well as soon as obtainable,
as there is some worn pretty badly.

Also the frost vent was plugged, which we cleared
up so it will drain back to 11 ft below ground when
the pump is shut down. A new 3 in all brass new
leather & spool valves was installed the old one can
be kept there for a spare which is in fair shape.

The new cylinder was purchased from the Blood agency
at Cardston.

We put a bail test on the well which
was checked by father Sherron of the St Marys school
Cardston.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

We found the static level of the well to be 194 ft from the top of the casing.

In bailing at 6.2 Gals per minute for 45 minutes we took the head down 35 ft to a level of 229 ft. We shut down for 15 minutes & the water came back 23 ft or to level of 206 ft which seems to indicate quite a stream of water. We also cleaned the bottom of well which was not so very dirty.

There is 14 ft of 2" Pump pipe below the 3" cylinder which makes a total of 287 ft of Pump which stands into the water for 93 ft.

We installed Pump Jack etc. & put a test on the well when pumping.

At 30 strokes - 6 inch strokes of the Jack per min. It is now Pumping 5 Gals in 1 minute & 45 sec.

Which if it holds at that for 4 to 8 hrs they can install the larger pulley for the Pump engine which they have & give it a try & see if it holds up O.K. & comes clear if not they will have to cut it down, Again. I hope this information is valuable to you & I hope to be of service to you again any where & time. With Thanks
yours truly
Bill Mangham.

File No. 15-46

Peigan Indian Agency,
Brockton Alta.
November 19th, 1946.

Indian Affairs Branch,
Dept. of Mines & Resources,
Ottawa, Ontario.

Sir,

weather conditions, in connection with
Schools etc.

I beg to report as follows in connection with
the severe storm, which has hit this country and has
disrupted everything.

R. C. School

With 30 inches of snow on the level, and
transportation practically stopped from Macleod West,
I have just received a visit from Father La France,
Principal of the Sacred Heart School that the water
situation is grave, and have arranged with him to allow
the children out till the truck can start hauling again.
As this was a very serious position, I immediately
contacted Ivan Blair who has a Bull Dozer, and arranged
for him to come out and clear the road to the School
so that the Sacred Heart Truck can commence hauling,
in doing this he will pass the Agency, and open up the
road into the Hospital. This will only be temporary
till the wind blows, however when the snow has drifted
I am satisfied we will be able to make a trail through
the fields, so that the water can be hauled.

X X X X X

I felt in making this report that with the
worst storm of many years hitting this District that
the above information would quiet any worry the Dept
might feel from Radio and Press reports. I trust
that any actions I have taken, and may take, will be
concurrent in by the Branch.

Att. B F Neary Esqr.

I beg to acknowledge receipt of your letter
via Air Mail of the 10th inst File 116-2-5 (W T 1.).

I have very little to report on this case, the
water situation is approximately the same as when I wrote last,
the well giving just enough for cooking; Hauling by Tank from
the C.P.R. Tank at Brocket is being done fairly regular now, altho
for a time the roads were so bad it was impossible.

The last report from the Principal shows a very
small amount available for pumping, and at times will not pump at
all but advise that he is able to keep things going. If this water
situation gets any better, I will advise you immediately.

Mr A Mc Millan
Indian Agent.
Brocket.

Sacred Heart Res School
Brocket Alta
December 14th 1946

Dear Mr Mc Millan.

The ^{water} ~~weather~~ situation at the Sacred Heart School is becoming critical as you are aware. We actually have to haul every drop of it through roads that are frightful. Our Truck that has been on the go for ~~xxx~~ years in such roads is a total wreck, and I can foresee that very soon we will be without means of hauling.

May I suggest to you and your Department the purchase of a new truck and tank of a capacity of 1000 gallons that will enable to keep the School going.

Due to the unpredictable weather, and the conditions of the roads I think that it is imperative to have a Reservoir of a capacity of 5000 to 10,000 gallons that would enable us to go on during the periods of bad weather or whenever we are unable to haul water.

I feel that at the moment that this is the most practical suggestion, at least the most practical plan.

Hoping that this will meet with your approval and that of your Department in Ottawa.

I remain sincerely yours

Sgd Maurice La France
Principal.

IN YOUR REPLY REFER TO
No. 2-46.
ALSO
TO DATE OF THIS LETTER

Sir,—

I beg to enclose herewith a Copy of a letter received from the Principal of the Sacred Heart School in connection with the water situation at the School, and especially the question of transportation for the water from the C.P.R. Tank to the School.

There is no question that during the last two months they have had a very hard time trying to haul the necessary water from the Tank to the School. With heavy snow falls and heavy winds drifting the snow all trails on the prairies have been blocked, we have opened the roads twice in different locations, just to have them fill in with the first wind. There is no doubt that the truck they have is taking a heavy test, and at present is in the Garage for temporary repairs.

I met Father La France, along with Father Charron, (who I understand discussed the water question with the Branch); last week and went thoroughly into the matter with them, there is no question that at the present time they need better equipment for transportation of the water, but as the question of a Reservoir could not be taken up till spring it would be much better, to face the transportation question now with further discussion on the Reservoir later on when equipment would be available and the work could be done.

In regard to the Transportation there is no doubt that a truck with a tank of the capacity of 1000 Gallons would be the most use ful and would allow of one trip being made where three trips are now being made. I am led to believe that Father Charron was advised that there was \$1000.00 available for this purpose but that this amount would not cover the cost. We will have to face the situation that the wells at this school are negligible, with occasional periods when a small amount of water can be pumped, and to keep the school running it will be necessary to haul all the time, which with the type of winter we are going through is not safe at all.

I would recommend that a Truck with a 1000 Gallon Tank be purchased for the purpose of hauling water for this school. and that consideration be given to the question of a storage capacity of approximately 10,000 Gallons be considered immediately, so that if a affirmative decision is made, the work may be done in suitable weather.

Anthony M. Mullan

Indian Agent.

January 14, 1947.

Mr. Bernard F. Heary
Supt. of Welfare & Training.
Dept. of Mines & Resources,
Ottawa, Ontario.

Dear Sir:

In December 1946, I forwarded to your office through your agent at Brocket, an urgent request for a new truck and tank of 1000 gal. capacity for hauling water. The present truck which has been in use for the last 8 years, is practically a total wreck due to the terrible conditions of the roads, and the weather which has been especially severe this winter.

My intention in renewing this matter to your consideration is that, because of the continual breaking down of the present truck, I fear we might be forced to send the children home for an indefinite period of time through lack of water. Our Indian children would thus be exposed to sickness, having to travel home through sub zero weather, and being fed at home with a poor and insufficient diet.

I would not forward this request to you if I would but slightly doubt that it is before hand fully supported by your local Agent who is in position to judge of our critical situation.

Respectfully yours,

Maurice Lafrance
O.M.I.

Father Maurice Lafrance, O.M.I.
Principal.

116-2-5 (W.T. 1)

Ottawa, 18 January 1947.

Memorandum: Acting Deputy Minister

Enclosed is a requisition for a truck to carry water at the Sacred Heart Indian Residential School in the Peigan Agency in the Province of Alberta.

The water supply at this school has caused trouble for several years past and when the well gave out, the water had to be transported. In 1945 the school management dug a new well and a plentiful supply of water was secured. However, this particular well has also given out and it has been necessary to again transport water.

In July, 1945 we offered to allow the school management \$1,000.00 towards the purchase of a new truck for carrying water but owing to conditions at that time they were unable to secure a truck for the amount offered by the Department.

We feel that a new truck should be supplied the school at the present time to transport water and I would appreciate it if the attached requisition receives favourable consideration.

116-2-5 (WT)

EXP.

Ottawa, January 22, 1947.

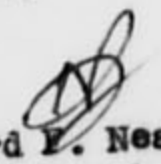

Reverend Father:

I have delayed answering your letter of January 14 while ensuring that the Minister's office was doing everything possible to obtain the truck which you require. The big difficulty is the purchasing of these vehicles. In the case of the Sandy Bay Residential School we were many months finding a suitable truck. In fact this truck was only obtained last week for their school, which is in a very similar position to your own insofar as the water supply is concerned.

The Director has just written again to the Deputy Minister enclosing a requisition for a new truck for your school. Mr. MacMillan has written us on several occasions at great length and has enclosed copies of your letters dealing with the critical water situation at your school.

As soon as we hear from the Departmental Purchasing Agent I will write you further in this matter.

Sincerely yours,

Bernard E. Neary,
Supt. of Welfare & Training.

(COPY OF LETTER RECEIVED FROM W.W. MAUGHAN WELL DRILLER
NOW DRILLING A WELL AT THE PEIGAN INDIAN AGENCY HEADQUARTERS.

Lethbridge Alta.
January 8th 1947.
P.O.Box 580.

Mr A Mc Millan Indian Agent
Brockton. Alberta.

Dear Sir:-

I would like to suggest a further try
for a water supply at the Sacred Heart School Brockton Alberta,
as I firmly believe there is sufficient water to be had.

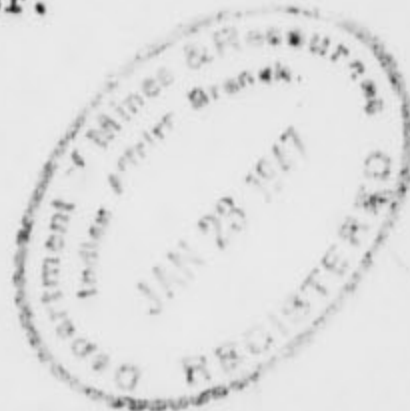

When I was testing for a supply two years ago
we ran across a supply of 5 Gallons per minute approximately 100 yds
due East of the present well at a depth of 185-190 feet. As told
by an Official not sufficient water we moved to the present location
going down to a depth of 185-190 feet we struck 11 Gallons per minute,
which was all it would do, with a pump test of 24 hours we held at 11
gallons which was all it would do, and a very nice well which stood
open hole all the way. We then did some prospecting to a further
depth of 300 feet with no more water encountered.

I would like to suggest you try a hole ap-
proximately 50 to 100 Yards South West of the present well. We need no
casing to test to 200 feet at a drilling price of \$2.50 per foot.
If we strike a good flow, we can then move on to the present well
and abandon it which I believe we can salvage it all which is valued
at approximately \$600.00 to 900.00, which is quite a saving in a cost
of \$100.00 for labor to tear it out.

After the present well was drilled by me, they
had a good supply of water for 8 to 10 months at a pumping rate of
5 Gallons per minute, which I suggested and knew would not harm the
well, the reason I suggested was that the water bearing strata is in
shale with a silt not sand bed and by pulling too much water at too
steady a rate it might plug itself off in the bed. But during the
hot summer months they pumped for Laundry and the Garden 11 gallons
per minute for a period of 48 Hours, and when they started up again
the water supply had decreased. I then made several trips to see if
I could bring it back but no luck, One trip was for a halter chain
dropped into the plunger wrecking the cylinder etc, which no one
seemed to know how it got there. They have 700 feet of new No 2
water line to the buildings laid below frost. So by going approx-
imately 100 Yards South West they can hook into the line without
much expense. I am now drilling for your Agency which you know and
I could move to the School right from here. Again I hope to be of
service to you.

Yours Truly,

William W Maughan
Well Driller.

Indian Affairs Branch Dept of Mines & Resources Ottawa.

I beg to enclose herewith a report mailed to me by Mr Wm Maughan Well Driller.

When he started drilling at this Agency he brought up this question verbally, and I asked him to put it in writing so that I could send you a copy of his report. It will be noted that in the event of this being accepted he quotes the cost of drilling, and pulling of old equipment as the only expense, however I have discussed this with Father La France and they will expect that if the old equipment in the old well is used payment for the Casing etc on approximately 50 to 60% basis.

The one reason I have sent this report forward that if a well can be found, it will save the monthly payment of \$100.00 per month we are now paying for Hauling water from the C.P.R. Tank at Brocket.

Not being well enough versed in the water strata question, I would not care to recommend this without the advice of some of your Engineers. However if considered advisable I will keep a good lookout on the work done.

Anthony M. Mullay
Indian Agent.

Memorandum

Mr. B. F. Neary
Supt. of Welfare & Training

Referring to your memorandum concerning well drilling at the Peigan Reserve, we have the following report from Indian Agent McMillan that the depth of the well is approximately 200 feet, water rises to 100 feet from surface.

I am sending you our file 51-116-5 in which there is a sketch and a report on this well drilling.

W. L. Falconer
W. L. Falconer, M.D.,

SCHOOLS

SACRED HEART SCHOOL

This school has been working under difficulties all through this quarter, the water situation having become serious early in the quarter, authority was granted for assistance to this school in the expense of hauling their water from the C.P.R. Tank; even with this assistance. I had to use all the available road money allowed to clear out the roads to the school so that the truck could move. This was followed later at the end of the quarter by sending out a gang of Indians to open up the roads again. I must say that the present Principal with all the troubles he has had to face is handling his work admirably.

GAS ENGINES

Mr. A McMillan,
Indian Agency,
Brockton, Alberta.
Dear Sir:-

Please accept this report of the electrical wiring of the
Anglican Indian School, Brockton, Alberta.

Storage Batteries.

Having learned from the attendant that the battery terminals had not
been cleaned or tightened since they were assembled seven years ago, we
proceeded in the same manner as at the Roman Catholic School. The connect-
ions were cleaner, tighter and less corroded because they were assembled
more carefully and with lots of vaseline to prevent corrosion.

This set of batteries is in good condition, after seven years of service
and will give good service for some time to come.

Branch Circuits.

Again, many of these branch circuits were fused with 20 - 25 and 30
ampere fuses. I replaced these with the 15 ampere fuses available, and
recommended purchasing a supply to complete the replacement, including
the out buildings, as soon as possible.

Drop Cords.

Would recommend that all drop cords be replaced with new cord.

Out Buildings.

Have instructed the attendant to cut the line, now lying on ground,
from pole where it lead to the barn, now burned.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Page 2.

Also asked him to tie line to the insulators on one of the cross arms. High wind prevented us from doing this work while there.

Fire Alarm System.

I checked this system and found the general system in good condition. The bell on the main floor and the one in the boy's gormitory were not operating. Have adjusted these bells and recommend a similar one be installed in the corridor of the basement.

This system is fed through a separate circuit from a portion of the battery of the plant. Again It might be well to consider installing a protected system, such as suggested in the Roman Catholic School report. However, this one is now in good working order.

Fire Escape Lights.

Please refer to Roman Catholic School report as the same condition exists in this school as there, except one light near one of the escapes here has a 7 $\frac{1}{2}$ watt red bulb in it. I make the same recommendation for this school, namely, that this matter be carefully considered.

Generator and Switchboard.

Adjusted brush contacts and switch contacts, also cleaned armature, This plant has had excellent care and is good for some years yet.

While there I also adjusted sump pump in boiler room and recommend frequent cleaning for basin in which pump sets.

Respectfully submitted,

The Southern Alberta Electric Ltd.,

Clarence D. Davis

Service Dep't.

LIGHTING PLANTS

BATTERIES

REFRIGERATORS

GAS ENGINES

Mr. A. McMillan,

Indian Agency,

Brocket, Alberta,

Dear Sir:-

Please accept this report of the electrical wiring of the
Roman Catholic Indian School at Brocket, Alberta.

TRouble- Explosion of glass envelope of electric light bulb in socket
and subsequent heating of electrical wiring in that circuit.

CAUSE #1 - Battery connections were loose, causing the line voltage to
rise, due to generated voltage being impressed on the line, instead of on
the batteries to charge same. This rise in voltage over 115 volts caused
excessive heating of the bulb until it burst.

When using batteries to crank diesel engine, there was audible arcing
between jar lugs and straps, due to loose bolts and dirty lugs and straps.

REMEDY:- Cleaned all straps, lugs and bolts, coated each part with vane
-line and reassembled cells, firmly tightening bolts.

RECOMMENDATION:- The plates of this set of Globelite GD13 batteries are
badly warped and disintegrated, due to too high a charging rate, or too high
a discharge rate without generator operating, or both. As the economical
operating life of these batteries is past, I would suggest they be traded
in on a new set. Due to the amount of sediment in the jars, it is necessary
to recharge them frequently, resulting in an added operating expense.

Would also recommend cleaning, vaseline coating, and tightening of
battery connections every six months. Five or six spare straps and a dozen

Report Roman Catholic Indian School, Brocket, Alta.

spare lead-coated bolts would insure continuous service, due to these lead-coated parts being easily stripped while assembling.

CAUSE #2:- Practically all branch circuits were fused with fuses in excess of 15 amperes. The majority were rated at 30 amperes. This did not protect the wiring as the fuses allowed current, in excess to the current carrying capacity of the wire, to flow through the circuit, thus causing the wire to heat and destroying the insulating covering of the wire.

No branch circuit of #14 copper wire should be fused with a fuse larger than 15 amperes. If these branch fuses had been rated at 15 amperes, then the short circuit in the socket, due to explosion of glass envelope of bulb, would have opened the circuit by blowing the fuse and thus protected the wire from overheating. The fuse found in overheated circuit was 30 amp.

REMEDY:- Used my supply of spare 15 amp. fuses, as far as it went, to replace fuses of higher rating and requested prompt purchase of adequate supply of 15 Amp fuses to properly fuse all branch circuits, including out buildings.

SUGGESTION:- If a fuse burns out, replace it with another one of the same capacity. If second fuse burns out, immediately, then examine outlets and appliances, connected to this circuit, for visible defects. Should no apparent cause be found, then call a licensed electrician to remedy the trouble. When circuits are properly fused, loss of life and loss by fire are greatly reduced.

Would also suggest that all drop cords, from ceiling outlet boxes, be replaced with new cord. The rubber insulation has dried out and is cracked when bent slightly. This poor insulation often causes a short circuit in a lamp socket, especially if handled frequently.

Fire Alarm System.

TROUBLE:- This system is not in use at the present time. From information received, I think some of the wiring in the walls is bare and when the wind blows hard air currents in the partitions cause to short circuit and ring the fire bells.

SUGGESTION:/ Due to so many lives depending on this system for protection in case of fire, I recommend a complete new system be installed direct from the batteries, in EX cable, including proper tamper proof switches and bells. In any case the present system should be completely checked and made to operate if new system is not desired.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Page 3.

Report Roman Catholic Indian School, Brocket, Alta.

Fire Escape Lights

While inspecting the building, I noticed no lights at the fire escape entrances, marked FIRE, EXIT or any other similar marking, or lights with red bulbs to indicate a fire escape. It is customary to run fire escape lights on a separate circuit direct from the battery and to use a small red bulb in a socket over each exit or to use a lighted exit sign. This circuit is run in rigid conduit or BX cable. These lights are to burn all night and if ten watt red lamps are used, the total drain would be less than one hundred watts.

I strongly recommend this installation be made as it might save many a heartache in case of a fire.

Generator And Switchboard.

This equipment was checked and found to be in good repair.

IN YOUR REPLY REFER TO
No.
ALSO
TO DATE OF THIS LETTER

Indian Affairs Branch Dept of Mines & Resources
Ottawa.
Sir,—

I beg to advise that on one of my visits to the Sacred Heart School; the Principal called my attention to the fact that one of the Bulbs blew out, and burnt the socket. Later he came to this Office, and advised that again this had happened, and that the socket and wire were burning. In both cases there happened to be a member of the Staff in the room where this had happened.

As there is no Electrician in Pincher Creek or Macleod, except Radio men, I went to Huttons Electric in Lethbridge, who recommended Southern Alberta Limited, stating the Electrician at that place worked only on wiring etc of Buildings with their own small plants. I arranged for them to come out and check the trouble in the Sacred Heart School, and while here to check over the St Cypriane School; he made a verbal report to me before leaving, and I asked him for reports on each School in writing, which he has now forwarded, and a copy of which I am enclosing with this letter.

For the information we have got I consider the cost very reasonable, and I understand that both School's are functioning very well, except for one fuse which has blown out.

I feel that in this report we may have a chance to cut out the Fire Risks in Residential Schools, as in many cases myself included I considered a larger fuse as the best to put in while as this man explains the largest fuse that should be used especially with the wiring we have is a 15 amperes. Otherwise the Bulb will blow and the wire over heat causing fire. At both Schools the type of fuse was over that size in many cases when checked; and this may be possible in many of your Schools.

After reading this Report I will be glad to be advised, as to what work you would consider should be done in these Establishments, especially as to the Fire Alarm system, and the installation of Red Lights.

Memorandum:

SURVEYS AND ENGINEERING

Care and Maintenance of Electrical Plants
in Indian Residential Schools.

Our Branch is now publishing a magazine called "The Indian School Bulletin" for all our branch officials, principals and teachers.

It has long been felt that more care should be taken with the electrical and mechanical equipment placed in our residential schools. We have recently received a typical report from the Southern Alberta Electric Limited concerning conditions at two Indian Residential Schools in Peigan Agency. The principal reported to the Agent that twice recently there had been instances of bulbs blowing out and sockets and electric wiring burning. Fortunately, in both instances there happened to be a member of the staff in the room when this had happened. Therefore, Mr. Indian Agent McMillan, in view of the evident fire hazard, called in the above company for an emergency inspection. I attach a copy of the above company's reports on both these schools.

Would it be possible to have an article prepared for a future issue of our magazine entitled "The Care and Maintenance of the Electrical Plants in Residential Schools" so that we may draw to the attention of all concerned the absolute necessity of careful maintenance and common sense in the use of the electrical plants provided.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

Memorandum:

SURVEYS AND ENGINEERING

Sacred Heart Indian Residential School,
Peigan Agency, Brocket, Alberta.

On 19 December, 1945, we wrote you concerning the drilling of a well to provide water at the above school.

At that time the school management made a determined effort to find water and at first their efforts seemed successful. On January 8, 1946, we were informed that the new well could supply about 15,000 gallons of water per day at this school.

On March 4, 1946, the Indian Agent reported that they were very well satisfied with the water supply after three months usage of the well. Attached is a report submitted by the Indian Agent on this well.

Then in October of 1946 we received reports that the water in the well had ceased to pump sufficient water to carry the school. We were forced to provide for a truck and tank to run water from the Canadian Pacific Railway water tank nearby. It was also necessary to allow the children to return to their homes from Friday evening to Sunday evening in order to conserve the water supply. It was hoped that this shortage of water was only temporary as seventeen links of a cow chain were found in the well by the driller when he made an emergency check. However, this has not been found to be so and we are faced with a serious water shortage.

It would be appreciated if we could have a report upon this situation so that we can decide either (a) to dig another well at this school, or (b) to provide a new tank truck for hauling of water from the Canadian Pacific Railway tank.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

-2-

Memorandum to Surveys & Engineering.

Feb. 8, 1947.

With regard to (a) above, we enclose a letter which has been received from William W. Maughan, well driller of Lethbridge, Alberta. Mr. Maughan has been employed by the Department of National Health and Welfare in digging a well to provide water for the Paigan Indian Hospital. Apparently water was discovered and was reported on January 21st, 1947, to be rising to one hundred feet from the surface from a well of approximately two hundred feet.

Mr. Hoey

Re: Water Supply, Sacred Heart Indian
Residential School, Brocket, Alberta.

This will acknowledge receipt of your memorandum of February 8th, with enclosures, relative to the above. While the result of any well drilling that may be done cannot be foretold with certainty, we are still of the opinion expressed in our memorandum of January 13th, 1944, that the only good prospect of securing a satisfactory and permanent water supply for this school is by drilling a well approximately 1200 feet deep and the cost of which would be in the order of from \$10,000 to \$13,000. Further consideration might be given to this proposal.

Our view is that the experience with the well drilled in December 1945 and which after providing an adequate supply for some months then failed to do so, confirms our opinion that comparatively shallow wells of only 200 to 300 feet in depth only tap small pockets of water-containing formations with the result that the supply therefrom is largely exhausted in a few months.

It is suggested that no further drilling of such shallow wells be done for the present. The melting of the snow in the next few months may considerably increase the amount of water available from the well drilled in December 1945.

In view of the existing situation, however, we would suggest that a new tank truck be secured for hauling water from the Canadian Pacific Railway tank at Brocket or elsewhere.

Re: Water Supply - Sacred Heart Residential School, Bocket

Your file 116-2-5 (W.T.1). This will confirm
my wire of even date as follows:

"Sacred Heart School Bocket still experiencing grave
water shortage which will inspect Friday Stop Driller
offers to drill two hundred fifty feet using old well
casing and if over five gallons per minute flow asks
\$600.00 and if under asks \$250.00 Stop Am meeting
driller at school Stop Wire if expenditure approved
writing."

The principal of the school, Father La France,
together with Father Charron, principal of the Blood R.C.
School, interviewed me today, when they stated that the water
supply at the Peigan School was very poor and it was difficult
to haul that quantity which is required over the roads, which
have now turned to a sea of water where there was formerly
drifted snow. They expected even worse roads when thawing
commences.

They made two suggestions to try and improve
the water supply:

1. To employ the services of Mr. W. W. Maughan, an
experienced driller, from Lethbridge.
2. To run a trench laterally to a spring a few hundred
yards from the school in order to ascertain where
the water may be going that formerly was piped and
used at this institution.

Mr. Maughan, who has recently drilled a well
at the Peigan Hospital, and who is the most reliable and
efficient driller that is known to us in this part of the
country, is confident that he can secure water near the
school and not far from the existing well which has gone
dry. He has made the offer that is mentioned in the wire,
i.e., to pull the casing out of the well that has gone dry
and to use it in a new hole, which he would drill to a
depth, if necessary, of 250 feet. He would supply this
material and his labour, and if he got more than 5 gallons
flow per minute, he would ask the sum of \$600.00, and if it
was under or a dry hole, he would only ask \$250.00. In
other words, he is offering to drill a well for less than
ordinary cost if we were supplying the casing, and if he
fails to get the required flow, he is only asking for his
out of pocket expenses. We have confidence in this driller
and believe that there is no alternative but to try and
get another well.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

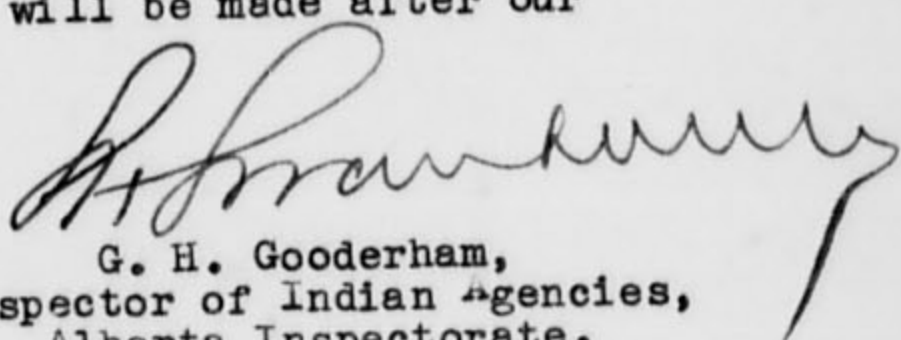

PUBLIC ARCHIVES

Feb. 25/47

With regard to the second suggestion, the Rev. Fathers had been inquiring about this spring, the nature of the ground and strata and the cribbing, which at one time or another had been put in and about the spring, has led them to believe that the water, which formerly flowed into the pipe which led to the school, has been mostly diverted along other channels. A trench at right angles to the flow would undoubtedly find these channels, if any existed. The principal asked for authority to hire Indians to dig the trench at a cost not exceeding \$75.00 to \$100.00. Our experience with springs would lead us to believe that this was good business. I am going to the Blood Reserve tomorrow and from there to the Peigan Agency on the 28th, when this will be inspected. In my wire, I did not ask for authority to dig the channel, but if I can be persuaded that it is a good idea while I am at the school, I am going to assume that the cost will be approved. There are a number of springs at various places on this Reserve near the schools and near the Agency, which, in my opinion, will flow with fairly definite consistency if the flow is properly directed by cribbing, and I consider it worth while to investigate, even at the cost of trenching.

Mr. Maughen's drilling outfit is now at the Agency, and he can commence work at the school immediately.

A further report will be made after our investigation is completed.

Water Supply,
Sacred Heart Residential School

The following telegram was received from
you on February 25:-

"Sacred Heart School, Brocket, still
experiencing great water shortage which will inspect
Friday. Driller offers to drill 250 feet using old
well casing and if over 5 gallons per minute flow
asks \$500.00 and if under 5 asks \$250.00. Am meeting
driller at school. Please wire if expenditure approved"
Writing."

On February 26 the following answer
was sent:-

"Approve Sacred Heart expenditure as
outlined your telegram February 25. You may encounter
difficulty rusted well casing."

Your letter 116-4B-14 of February 25 has
just arrived. It is noted that due to an error in transmission
the first quotation received from Mr. Maughan was \$600.00
rather than the \$500.00 quoted in the original telegram.
However, approval is given for the expenditure of this larger
sum.

..... The

Re: Water Supply - Sacred Heart Residential School,
Peigan Reserve.

Your letter of February 28th to hand.

On that date I visited the school in company with the Indian Agent and was met there by the principal and Mr. Maughan, well driller. The water supply for this school was subject to discussion and it was learned that at the present there is a small intermittent supply from the old well and the spring, but that a great deal of the water is being hauled in tanks.

Mr. Maughan stated that he had made several attempts to increase the flow in the existing well by removal of foreign matter but had not been successful. He said that it was his belief that there had been an attempt to pump water from the well faster than it was coming in, and that in his experience, when this is done in certain formations, there is a likelihood for the vein to be closed and the water flow to cease. In this we concur, as we have encountered the same experience elsewhere. He has drilled three wells within a short distance of the school during the past few years, and each of these had produced a flow in excess of three gallons per minute, and it was his contention, in which we agree, that if the pumping was limited to less than the flow, that the well would be good for an indefinite time.

He stated that he was prepared to drill a few hundred yards to the west of the present well to a depth of 200 feet, and if the flow did not exceed three gallons per minute, he would ask to be paid only \$250.00 for his work. Should the water flow be in excess of that amount, he would then set his rig over the old well and try to remove the pipe and casing and put it down in the new well. The formation is such that all wells have been drilled to water without inserting casing as the drill went down. When questioned as to the possibility of pulling the casing, he stated that it has only been in for less than two years and that he had inserted it himself. His experience of many years in the Oil Fields led him to believe that it would be reasonable to expect that this could be removed intact. He had the tools to do so. Failing however to pull it out, he was not prepared to supply casing at his own expense, but could supply it at the present cost. The pipe is 3" and really too big, but there is now no

March 4/47

alternative but to use it as any size is almost impossible to secure. The pumping, of course, will be controlled by a gearing of the pump.

The site was viewed and the general lay of the land explained to us. It appeared to be a reasonable gamble that he will strike water by drilling to a depth of not over 200 feet, because water was struck in the other wells at between 180 and 190 feet. Mr. Maughan was then instructed to proceed on the terms that he had stated, and should now be drilling as his outfit was at the Indian Agency.

With regard to the channelling of the springs, I learned that these are not deep-seated but surface springs that rise and fall with the amount of precipitation. There was no advantage in channelling.

G. H. Gooderham,
Inspector of Indian Agencies,

Report from J.A.Wilson.

REPORT ON 10 H.P. DIESEL ENGINE AT SACRED HEART SCHOOL, BREE
BROCKET Alta.

Rods re-babbled
to fit shaft. This Engine had worn Main Bearing and connecting
rods. Shaft had to be taken out and turned to .030 under size.
Engine also needed general check up and parts replaced that
were worn. This plant should have general check over at
least once a year, so worn parts can be replaced before they do
damage to other parts of the machine. That caused heavy repair
bills.

sgd. J.A.Wilson.....

P.S. Work should be done while school is closed during
summer. This Engine would be a lot better if large cooling
tank was used instead of Rad., cooled.

J A W.

REPORT ON 10 H.P., DIESEL AT ST CYPRIANS SCHOOL BROCKET
Alberta.

This Engine also needs check up once a year. This
engine will need a new Cylinder head in about a years time,
providing engine is looked after and water is not allowed to
get low in cooling tank to let engine get over heated.

Water cooling tank should be replaced immediately
as bottom of tank is rotting and leaking pretty bad, "not
dependable". Water jacket on cylinder should be cleaned out
once a year on account of Heavy deposit of Lime corrosion
caused by the water.

sgd...J.A.Wilson....

P.S. Shaft should be taken out and have Fly wheel trued
up on shaft. Worn on account of being run with loose key.
(Key in Engine now was not fitted, and is jammed in Key way.

Just one reason why they should be checked over
thoroughly once a year to catch all their slight wearing
parts that can cause a lot of damage when finally give way.

I beg to enclose herewith Voucher No
43 covering the work done to Lister Bructon Engines at the
two Indian Residential Schools.

The visit of this man from the Bruce
Robison Co was necessitated by the engine at the Sacred Heart
School knockinh so baldy that it had to be shut down. I phoned
the Bruce Robinson Co, and asked for a man in the emergency and
he came as soon as he could, the school had to work with Lamps
for the time he took the shaft to Calgary.

When he completed the sacred Heart school
I asked him to check the Anglican school, and he found a few
troubles there, I asked him on completion to give me a report on
the engines, and am enclosing a copy of same, for further instructions.

March 31, 1947.

Mr. Bernard F. Neary
Supt. of Welfare and Training,
Ottawa, Ontario.

Dear Sir:

In a few days you will receive the report on the well drilling at the Sacred Heart Indian Res. School from your Agent Mr. Mac Millan.

I am sorry to say that we have not met with success. Not a trickle of water was found.

Hence, this means that we will be obliged to haul water again, which has been very costly for the School, although your department helps me with a grant of one hundred dollars a month.

During the past year, as you will see in Mr. Scott, the Treasury Auditor's report, the truck has cost us over \$500.00 in repairs only. Much repairs would be actually needed on our old truck, but I am reluctant to have it repaired, as your department has promised to send me a new three ton truck. Please tell me if it will soon be coming. I have had two offers of new trucks from Agents in Lethbridge and Pincher Creek which I naturally refused not having the authority to do the purchase myself or through your Agent Mr. Mac Millan.

*Send to
Mr. Neary
[Signature]*

I have requested a few weeks ago for sheeting, towels, soap etc., please tell me if I can hope that the required items will be forthcoming or if they will not be allotted by the Department.

Yours truly,

W.A.H.
Peigan Indian Agency
Brockton Alta.
April 18th 1947.

Indian Affairs Branch Dept of Mines & Resources Ottawa.

I beg to return herewith Vouchers
No 36 and No 44, with the following information.

Voucher 44 was sent forward to pay for flooring for the
Sacred Heart new floor in the boys Dormitory, Flooring
has not been available since quite a period ago, and when
this flooring was located, purchase was made immediately
before the opportunity was passed up, this was done on the
approval contained in your letter File 116-2-5 of the 16th
day of August 1946.
Voucher 36 was ordered by the Principal of Sacred Heart School
after I advised him of your letter File 116-2-5 (WTL) of
Sept 5th 1946.

Memorandum:

ACTING DEPARTMENTAL PURCHASING AGENT

Attached is an account amounting to \$167.36 covering the cost of lumber required for the repairs at the Sacred Heart Residential School. This lumber was available and immediate purchase was necessary in order to obtain it.

Please issue purchase order so that the account may be paid.

I also attach account amounting to \$180. covering the cost of marbolem purchased for the same school. In this connection I would refer you to your memorandum of September 3rd, 1946, file 67-169-15-7A.

Please issue purchase order so that it can be paid.

Coding in each case is as follows: 759-76-10-691.

Peigan Indian Reserve
Brocket Alta.
April 22nd 1947.

Indian Affairs Branch Dept of Mines & resources Ottawa.

I beg to enclose herewith Voucher
No 99 covering the drilling of 226 feet for the purpose of
trying to get water at the Sacred Heart School.

Authority by wire was received for
200 feet at \$250.00 for the job if no water was found, and
on his own initiative the driller went 26 feet further and
asked permission to bill the account as enclosed.

I had no information until it was done t
that he intended to go deeper, than originally agreed to.

The payment of the enclosed Voucher is
a matter which I am leaving to the Branch to decide.

B. F. Neary, Esq.,
Supt. of Welfare & Training,
Indian Affairs Branch,
Dept. of Mines & Resources,
OTTAWA, Ontario.

Re: Sacred Heart Residential School
Peigan Reserve

The exterior of this school should be painted. The Rev. Principal, Father La France, states that there is sufficient painting material on hand to do a good two-coat job.

This work should be done during the summer, preferably during vacation. The cost is estimated at \$600.00.

As there are no Indians capable of doing this work properly, the services of qualified painters should be obtained. There is a very good painting firm in the town of Cardston, who will do the work at a reasonable cost.

Will authority for this expenditure be granted please.

G. H. Gooderham
G. H. Gooderham,
Inspector of Indian Agencies,
Alberta Inspectorate.

Ottawa, May 28th, 1947.

Mr. G.H. Gooderham, Inspector of Indian
Agencies, Calgary, Alberta.

Sacred Heart Residential School
Peigan Reserve.

In our 1947-48 estimates, the sum of \$650.
was included for the purpose of general repairs
required at the above school.

We have already expended the sum of \$282.50
for the drilling of a well at this school. Would
you please advise the Principal that the remaining
sum can be expended in the manner in which he and
the Agent would recommend.

Bernard E. Neary

IN YOUR REPLY REFER TO
No.
ALSO
TO DATE OF THIS LETTER

Sir,—

I beg to advise that this week I visited the Sacred Heart Residential School with a view of checking over with the Principal the necessary repairs to the above school. We had all his points ready and we checked over the different repair jobs which he wished to do, and I have put them in rotation as to what was his first second and so on choices.

Since making this inspection I have received a copy of a letter from Mr Neary Supt of Welfare and Training to Mr Gooderham, in which the sum of \$650.00 has been allowed this school from which already has been paid out \$282.50.

However I am placing the request before you so that if there are any items which will be taken care of outside of the Estimates, I can be advised so that the Estimates for next year may be made accordingly.

1. Bake Oven. Movement of Bakery equipment, Oven Racks and cups. Board from present location to the Ice House not now being used. will mean dismantling and rebuilding oven, and putting door & window in Ice House. Remarks. Any one who has visited this school will realize the heat in this small room where you can hardly move, and if two people are in at once it is almost impossible to open the door, this is not large enough if girls are going to be taught baking. A dough Mixer of 1 Sack capacity.
2. Boys Dormitory Laying of the Floor in the boys dormitory, Flooring for this Floor was purchased late last year and the Labor is all that would be needed, apprx. price \$250.00
3. Refrigeration A Frigidaire of the walk in variety for the kitchen, possible to purchase at \$700.00 through War Assets U.S.A.
4. Reservoir. A 10,000 Gallon Reservoir needed to carry the school over during a severe period when roads are impassable. This will be a very expensive project, but with the present outlook would be very close to a necessity.
5. Sewing Machines Four sewing Machines for use in the sewing room approximate cost \$250.00.
6. Laundry . 1 Gasoline washer. to save use of barrel washer, when only a small wash needed \$160.00
1 Small Mangle. 36".
- 7 Kitchen 1 Kitchen Stove with Fire Box in middle of stove, capable of handling 16 90 people. Present fire Box at end will only heat one oven.
8. Vacuum cleaner approximately \$160.00
9. 17 Lineal Yards Battle ship Linoleum for Kitchen
16 " " " " " for Refectory.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 6)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The question of the Crash Doors between the Girl's Dormitory and the main Building, recommended by the Architect is now being done by help arranged for by the School, at a small cost, this has not been done to date owing to the inability to have a Contractor come out while school was on, and shortage of time that the job would take.

A letter by the Inspector to B.F. Neary Esqr has come to hand recommending the painting of the Sacred Heart School outside, on the basis of the School having the paint, I am advised by the Principal that he has 50 Gallons Linseed Oil, and 50 Cans White lead approximately 25 lbs. The cost as quoted in the Inspector's letter for labor would be about \$600.00. Will this be done separate to the amount allowed in the Estimates.

While there I looked over the Outbuildings, and I am sorry to say that the paint is practically all gone on these buildings, except where the outside walls are sheltered from the wind and rain. This will have to be taken care of before long or the wood will start to crack.

I have mentioned the above points as if the funds are not available to keep up the work on the Schools, I would like to be advised, as I intend to make a complete survey, and place everything necessary on the Estimates for the year 1948-1949.

Re: Addition to Sacred Heart, Brocket School.

Attention: Mr. Phelan.

Dear Mr. Phelan:

I am in receipt of a letter from Reverend Father M. Lafrance, O.M.I., principal of the above school in which he states that of the seventy pupils now in attendance, only one will be discharged at the end of the school year and that thirty are on the waiting list for admission next September. This will mean hundred children on that Reserve, who are of school age, thirty of whom will receive no education at all.

An addition to the school, somewhat similar to that which the principal of St. Philips school built, would be quite in order and I hope that provisions will be made for it in next year's estimates. I understand that the water situation will be solved and if this information is correct, I cannot see why the school could not be enlarged, as requested by Reverend Father Lafrance.

Yours truly,

J.O. Plourde, O.M.I.

Ottawa, July 4th, 1947.

Mr. Anthony McMillan, Indian Agent,
Brocket, Alberta.

We have your letter of the 1st ultimo
with reference to repairs required at the Sacred Heart
Indian Residential School.

The following expenditures are approved:

- (1) \$250. to lay the floor in the boys' dormitory.
(It is noted that the material is on hand)
- (2) Purchasing Branch is being requested to secure
four ordinary sewing machines.
- (3) Purchasing Branch is being requested to secure
the 32 lineal yards of linoleum

From the information contained in your
letter, it is evident that it would be desirable to
move the bakery equipment from its present location
to the other building which you mentioned. Please
let me know what expense would be involved in carrying
out this improvement.

Bernard F. Neary
Supt. of Welfare & Training.

Schools.

EXD.
A.

Sacred Heart

This school as far as tuition is concerned is functioning excellently.

However the water situation has not changed and although another effort was made to get water this proved unsuccessful. The trucking of water by tank is still going on, and is just too bad that this school is in this position as the Principal and staff are doing a very good job under adverse circumstances.

The engines in the this school that is the Lister Bruston had to be checked over during this month, and are now functioning a great deal better.

Also during the quarter Mr. Palmer of Edmonton came down and weathered stripped the windows in the School this proved a great success and now we have no windows rattling and very little drafts either.

Ottawa, September 3, 1947.

Mr. A. McMillan, Indian Agent, Brocket, Alberta.

I have your letter of the 24th ultimo, with reference to a standard box for the truck supplied to the Sacred Heart School.

When we ordered this truck it was understood that it was to be used for transporting water and consequently, it was presumed that a water tank was attached to the truck. It is not understood why a standard box is now required for this machine.

Mr A Mc Millan.
Indian Agent
Brockton

Sacred Heart school
Brockton Alta.
October 17th 1947.

Dear Sir;-

It has been impossible for me
up to now, to hire a Night Watchman, because the salary does not
seem to be sufficient.

Would you kindly apply to the
Dept of Indian Affairs for a salary of at least \$60.00 dollars
a month instead of the \$40.00 a month which is now being paid.

This should not be so difficult to obtain
as \$60.00 per month is already paid in some schools for a Night
Watchman.

Yours Truly,

sgd Maurice La France.

PLEASE QUOTE
FILE _____

Indian Affairs Branch Dept of Mines & Resources Ottawa.
Attention B.F. Neary Esqr.

I beg to enclose a copy of a letter received from
Father La France Principal of Sacred Heart School Brocket,
which speaks for itself.

It would seem that he has the information that
some other schools are receiving \$60.00 for their Night Watchman
and asking for the same rate here.
I am making no comment on this matter, as if this
allowed at one school it will immediately be asked for by the
other.

Anthony McMillan
Indian Agent.

EXD.

Ottawa, October 22, 1947.

Mr. Anthony McMillan, Indian Agent,
Brocket, Alberta.

We have your letter of the 17th instant with reference to the allowance for the night watchman at the Sacred Heart Residential School. In the current year's appropriation we have only provided the same amount as last year, namely \$40.00 a month towards the salary of the night watchman. We regret that no increase can be made.

Bernard F. Neary
Supt. of Welfare & Training.

1 Petition
2 [Signature]

Saunders Hunt Res #5
116-2-5

To the Right Honourable Minister of Mines & Resources
Dept. of Indian Affairs Branch
C/O Mr. R. H. Heey, Director
Ottawa

The humble petition of the Indians
of PEGAN RESERVE
Brocket Alberta

Showeth, That we the Roman Catholic Indians of the
Pegan Reserve at Brocket, Alberta, once more pe-
tition the Department of Indian Affairs at Ottawa, to
to give us a DAY RESIDENTIAL SCHOOL capable of
accommodating at least 150 children.

The population is increasing all the time.
Actually there are at least 30 children of school
age who are unable to attend.

We cannot but feel that the actual school
is unsafe for our children. So many school have
been destroyed by fire of late that we are in a
constant state of worry for the safety of our
children.

We are altogether opposed to the erection
of any day schools on our reserve, as we know that
they would be altogether unsatisfactory for all
concerned.

C O P Y

116-2-5

Original on 116-2-1 (W T)

January 14, 1948.

Mr. C. H. Gooderham,
Regional Supervisor of Indian Agencies,
C a l g a r y, Alberta.

Sacred Heart Indian Residential School.

Reference your 116-4E-14 of January 9 -

It is noted from your report that a new cook stove is needed at this school. Authority for its purchase will depend largely on the availability of funds as we are drawing close to the end of our fiscal year.

Your comments concerning the Sister Superior and other members of the staff have been noted and it is of course similar to conditions which exist at certain other Indian residential schools.

Your comments on the water situation have been sent to the Lands and Development Services Branch with the request that they investigate your two recommendations. It would seem evident that water must be secured at this school if we are to consider operating it in the future. Your report will do much to bring this matter to a head and to obtain a definite decision from the Lands and Development Services Branch, who are our advisors in matters of this nature.

116-2-5 (W T)

Ottawa, January 15, 1948.

MEMORANDUM:

DIRECTOR,
LANDS and DEVELOPMENT SERVICES.

Water Supply - Sacred Heart Residential School,
Peigan Indian Reserve, Alberta -

As you are probably aware, we have been experiencing difficulty for a long time with the water supply at this school. Your files will reveal the efforts that have been made in the past to obtain water. At the present time we are providing a truck and paying a driver \$100.00 a month to draw water for this school.

We have now received a full report from Mr. G. H. Gooderham, our Regional Supervisor of Indian Agencies for the province of Alberta. In his report Mr. Gooderham makes the following comments: -

"The water situation has not improved; the local well and spring do not supply sufficient for the needs of the institution and some water must be hauled from Brockton. The road has been improved, and the truck supplied for this purpose has got through without difficulty so far this winter.

"During the fiscal year 1947/48 the Branch will have paid out \$4,050.00 and the school authorities \$350.00, either to haul or supply water for this institution. That amount, of course, includes the purchase of a truck and an allowance of \$100.00 a month to operate. That

EVD.

..... is

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 7)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

is a great deal of money and would pay for a lot of prospecting for water. Therefore, it is recommended that consideration be given -

1. to find the source of the spring near the school, and if it is sufficient, to control it and direct it to the institution.
2. or, drill a deep well at the summit where the spring originates.

"It will be long time economy to be prepared to spend at least \$4,000.00 or \$5,000.00.

"As to the future, this school cannot be operated indefinitely at this point without water. There are already between fifteen and twenty Peigan children of school age, which the two schools cannot accommodate, and the majority of them are of the Roman Catholic faith. I would not recommend the enlargement of the present residential school, certainly not as long as it has not got a sufficient supply of water. Even if a day school is erected on the Peigan Reserve, this school still will have the water problem. It is therefore our considered opinion that early in 1948 we must be prepared to hunt for water. If it is eventually found that water cannot be secured, this school should be abandoned or moved."

In view of your previous technical experience in trying to locate water at this school in the past, we would appreciate your comments on the two recommendations which Mr. Gooderham has made above.

Memorandum

Re: Water Supply - Sacred Heart Residential
School, Peigan Indian Reserve, Alberta.

Referring to your memorandum of January 17th we
have now received the following from Mr. J.S. Stewart of
the Geological Survey under date of January 26th, 1948:

"We have no detailed maps of the topography and
geology of the region in the vicinity of the school.

The maps available, however, show that the school
is probably at least 300 feet above river level and that
the bedrock immediately underlying is the Porcupine Hills
Sandstone. Now some of these sandstone beds should be
sufficiently permeable to carry water and should be
sufficiently widespread to carry water from the river to
the school. Water should enter such sandstones where
they outcrop in the river bed a few miles to the west.
The water could come from either the Oldman or Waterton
River and I should think a well 600 feet deep would get
sufficient water for your purpose. As far as we know at
present such a well could be drilled as close to the
school as you wish, in fact the lower the elevation of
the surface the less the depth will probably be to water.

With regard to the spring, an examination of the
geologic and topographic map, shows no suggestion of a
large enough gathering ground to constantly supply a
spring with a sufficient quantity of water for your
purpose."

The Indian Agent appears to have been drilling
for water. A copy of his report of December 13, 1945 indicates
that seven wells have been drilled and one, drilled to a
depth of 300 feet, has supplied part of the water required
by the School.

If water is available at a depth of 600 feet it
might only be necessary to continue drilling one of the
present wells until water is secured.

J. A. Mill

Mr. Hoey

RE: Water Supply - Sacred Heart Residential
School, Peigan Indian Reserve, Alberta.

I am attaching herewith Chief Engineer Mills' memorandum of the 30th ultimo which contains information received from Dr. J. S. Stewart of the Geological Survey in reply to your request of the 15th ultimo for advice as to further steps which could be taken to improve the water supply at this point.

We place a good deal of confidence in the opinion expressed by Dr. Stewart whose suggestion that the drilling be extended to 600 feet is probably the best advice that can be given to you.

Director.

Your 41167-W

Our file 4919

Airmail

Calgary, January 28th, 1948.

V. Meek, Esq., Controller, Dominion Water & Power Bureau,
Ottawa.

Re: Water Supply for Sacred Heart School,
Peigan Indian Reserve, near Brocket, Alta.

I wish to acknowledge receipt of your letter of the 26th instant re the above subject and in reply wish to comment on Mr. Gooderham's resolutions and make suggestions as follows.

Mr. Gooderham's first recommendation is to find the source of the spring near the school. In reference to this suggestion, our staff here have practically no experience in the tracing of a spring to its source and we are very doubtful, even if found, that it would tap any appreciable amount of water.

Regarding Mr. Gooderham's second recommendation, we believe that drilling a well anywhere in the area is nothing but a gamble and, before doing anything in that line, we strongly recommend that the best possible advice be first obtained.

This office advises that Mr. T.S. Mills, Chief Engineer, contact Mr. G.F. Hamelin, Manager, Western Water Wells Ltd., Donegal Mansions, Calgary, Alberta, direct and obtain his advice before incurring any expense.

We believe that if Mr. Hamelin, who is a geologist and well known to Dr. Hume, could be persuaded to make a trip to the area and submit his recommendation, it would be well worth while. We are endeavouring to contact Mr. Hamelin who left town yesterday for Leduc, where I understand he is drilling a well for the town, but so far we have been unsuccessful. He is due back tonight and immediately we contact him we shall advise you by airmail.

Since writing the above, we have contacted Mr. Hamelin and he advises me that he is prepared to make a trip to the area, review the situation, and submit his recommendations together with an estimate of cost. He also tells me that he has visited the area and previously submitted recommendations to the Dept. of Indian Affairs. He is waiting now to hear from a bid on work at Waterton Lakes which he submitted at the request of the Department and he said it would be an ideal time to do both jobs.

(Sgd) W.T. McFarlane.

MEMORANDUM

Re: Water Supply,
Sacred Heart Residential School,
Peigan Indian Reserve, Alberta.

Referring to your memorandum of January 17th and further to our recent memorandum quoting a memorandum from the Geological Survey, we are in receipt of the following from Mr. Meek under date of January 30, 1948.

" A copy of your letter of January 22, was forwarded to Mr. O.H. Hoover, District Chief Engineer, Calgary, with a request that he comment on the two resolutions advanced by Mr. Gooderham and also make any alternate suggestion which might insure a reliable supply of water for the school.

I am enclosing a copy of Mr. Hoover's reply.

Mr. Hoover suggests that you immediately communicate with Mr. G.F. Hamelin, Manager, Western Water Wells Ltd., Donegal Mansions, Calgary, with the view of obtaining his expert advice."

Also attached in duplicate is copy of the letter from Mr. Hoover to Mr. Meek dated January 28th, 1948. You will note the recommendation to contact Mr. G.F. Hamelin, Manager, Western Water Wells Ltd., Donegal Mansions, Calgary, for advice as to procedure in securing water for the above school.

We await your further instructions.

Encls. R.A. Gibson, Esq.,
Director,
Lands and Development Services,
Department of Mines and Resources,
Ottawa, Ontario.

Mr. Hovey:

You may agree it would be worthwhile paying the expenses of Mr. Hamelin to look over the site and get his views on the possibility of getting water and what he would be prepared to quote. If so, would you prefer to have arrangements made through your Indian Agent or will we arrange through Chief Engineer Mills?

Dear sir :

Re Water Supply - Sacred Heart Residential School,
Peigan Indian Reserve , Alberta.

This will acknowledge receipt of your Airmail letter of February 17th, and as you requested I made a trip to the School and discussed the situation, and walked over the area, although it was covered with deep drifts of snow, and herewith submit a report with an estimate of cost.

1. The existing well and spring

The only well at present available for the use of the School is that one to the south-west drilled to a depth of 298 feet and at that time had a static level of 158 feet. The present pump setting is 250 feet and the well will only stand pumping 3 to 4 hours every few days. The pumping equipment is gasoline driven and the well is connected by buried pipe line to the School. The well originally, at the time it was drilled, had a reported capacity of 5 I.G.P.M. Its present status is nothing more than a seepage well.

The spring has been a constant source of small supply, except in the winter months of December, January and February. The collecting reservoir could not be examined as it was completely covered with snow. The School was hauling water from the C. P. R. reservoir at Brocket. The tank on the truck was draining into a hose alongside the road and this was leading the water into the reservoir from which it reached the School buildings. The C. P. R. reservoir at Brocket is 5 miles due west from the School. This reservoir is filled by water from the Oldman River which is approximately 1 mile distant. This spring is a type of gravity spring which I would class as a valley - depression spring. A low range of hills exists immediately to the south with hard sandstone ledges outcropping near their top, and the Principal stated that this sandstone outcrops also near where the spring issues. There is a shallow coulee below this point of issue in which a stockwatering dam has been constructed. There was considerable water in this dam at the time of my visit. It is believed that there is a shallow mantle of till material overlying these low hills that act as a limited storage area for ground water. This groundwater could also have seeped into the top of the underlying bedrock. The spring as it exists increases

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 7)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

and decreases with the moisture supply, and also there is a suspicion that some water escapes the impounding reservoir and gets into the dam below.

There was a reported No. 2 spring which I estimated would be 2000 feet or more westerly. It could not be examined because of snow and the Principal stated that there was little more than a damp spot in the summer season.

2. Other Sources of water in the Area

The Oldman River which supplies the C.P.R. reservoir at Brocket is a dependable source of water, but not considered safe for drinking supply unless treated. Its distance from the School, or even the distance of the C.P.R. reservoir are too great to recommend these as suitable.

St. Cyprien Residential School, which is approximately 3 miles westerly is reported to have a well in the basement that flows, and the quality of the water quite suitable. The depth of the well was reported as 200 feet.

The bedrock formations in this area are reported to all have a gentle east dip. The bedrock formation in which the aquifer occurs at 200 feet at St. Cyprien School apparently has changed 3 miles to the east, or has been faulted, as the well drilled to a depth of 544 feet at Sacred Heart School should have encountered this aquifer but apparently did not. Due to this apparent condition of the bedrock formation that underlies the School it is not recommended that drilling be undertaken to depths greater than this reported well of 544 feet.

3. Recommendations

Development of the #1 spring area be undertaken by means of a number of shallow drilled wells. That such drilling be undertaken immediately above the existing spring and into the bedrock for a total of 50 feet. It is believed that possibly 3 wells could be drilled on that same contour toward the east, with a spacing of between 200 to 300 feet. Should small supplies be encountered it is believed that they could readily be piped and possibly by gravity, to the existing impounding reservoir.

Should this fail to satisfactorily augment the existing supply it is suggested that a well be drilled west of the School toward St. Cyprien School at some location about 1 mile east of the St. Cyprien well. Should a well be located at depth of not greater than 250 feet of similar quality and be artesian the Principal of Sacred Heart states such a well would be of considerable benefit to Indian families in that neighborhood. It is then suggested that a further well be attempted 1 mile further east, making this 1 mile to the west of the Sacred Heart School. Should a similar well be encountered at this location consideration might then be given to utilizing this supply by means of either a buried pipe line or just a shallow buried water line. If the well were artesian and the fall sufficient such an installation might serve with additional storage reservoir at the buildings. Should the first proposed drilled well to 250 feet be dry, or insufficient, then no second drilled well is recommended.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 7)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

4. Estimate of drilling costs:

Mobilization of drilling equipment, trailer accommodation for crew, and well casing -----	\$ 200.00
Drilling an estimated 150 feet in the area of #1 spring @ \$4.00 a foot -----	\$ 600.00
Well casing for an estimated 3 wells 150 ft. of 5" steel casing @ 2.00 ft.-	\$ 300.00
Demobilization of equipment and return to Calgary -----	\$ 200.00

\$ 1300.00

Drilling a proposed well 2 miles westerly 250 ft. @ 3.50 a foot-----	\$ 875.00
Well casing 250' of 5" steel casing @ 2.00 a foot -----	\$ 500.00
30 feet of 6" outer casing at surface @ 3.00 a foot -----	\$ 90.00
Pump testing for capacity, if necessary 24 hours @ 3.00 an hour -----	\$ 72.00

\$1537.00

For the drilling of a second well similar to the above, 1 mile west of the School -----	\$1537.00
---	-----------

Drilling equipment could be made available within 1 month if instructed to undertake work at this site.

The estimate of drilling cost for the drilling at the spring area would be reduced by the cost of well casing, or \$300.00, if insufficient water were encountered to justify leaving the casing and making it a well, or wells.

The drilling of this spring area may produce additional small quantities of water that still does not satisfactorily secure the School water supply.

This report is therefor submitted for your consideration and the account, in 5 copies, to cover its expense.

Yours very truly,

(Sgd.) D. F. Hamelin

QUOTE FILE IA 1680-4

2064

Memorandum:

Re: Water Supply - Sacred Heart Residential
School, Peigan Indian Reserve - Alberta

Referring to the memorandum from Indian Affairs
dated February 12th, 1948, Mr. Hamelin was requested to
examine the situation and submit recommendations for
securing a satisfactory water supply for the school,
together with an estimate of cost.

We have now received a report from Mr. Hamelin
dated February 24th, duplicate copies of which are
attached herewith. The recommendation is to drill
three wells in the area of the spring, each of which
is to go down fifty feet into bedrock. Should these
not produce sufficient water Mr. Hamelin suggests
exploratory drilling in an endeavour to tap the aquifer
which supplies the St. Cyprien School. He recommends
a well be driven between the St. Cyprien and Sacred
Heart Schools, which are three miles apart, and about one
mile from the well supplying the former. If successful,
another well is proposed to be drilled one more mile
nearer the Sacred Heart School which would still be
one mile away. There can be no guarantee that water
will be found in sufficient quantity to meet fully
the requirements of the Sacred Heart School.

You will observe that the estimated cost of
developing the spring area is \$1300.00 and the cost of
each well to tap the St. Cyprien aquifer is estimated
at \$1537.00. It is of course evident from the details
of the estimates that the stated costs only cover the
development of a possible supply and if a suitable
supply is found, additional costs will probably be
necessary for delivery to the School.

Attached hereto for transmission to the
Indian Affairs Branch for payment are four copies of
an account from Western Water Wells Limited for \$150.00
to cover cost of the inspection and report.

J. A. Mills

Attention: Superintendent of Education

re: Sacred Heart Indian Residential School

Answering yours of the 15th instant, it is recommended that a supplementary item of \$14,000.00 be placed in the estimates for the erection of a day school, or the acquisition of other property which would care for all school children on this reserve.

No additional expenditure should be made at the Sacred Heart School until there is sufficient water. There are three alternatives:

1. The aforementioned classroom block.
2. The removal of this school to a new site, to wit, the R.C.A.F. airport, MacLeod.
3. A day school.

The present building is not sufficiently large to accommodate 30 more resident pupils. Therefore, if a school block was erected, some of these pupils must attend as day pupils and this must be seriously considered if it is found the only alternative.

G. H. Gooderham

Dear Sir.

As recommended by Miss
McCready the government dietitian,
I have purchased a dough mixer
for the bakery at the cost of \$150.00

This mixer is in very good
condition and as indicated the
cost it is a real bargain which
could not be passed.

I hope the Dept. which
has already implicitly approved
by its dietitian, will help me in the
payment of this all important item

Yours Truly.

CALGARY, Alberta,
April 12, 1948.

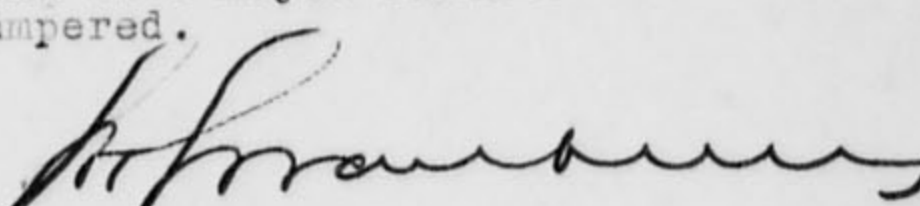

B. F. Perry, Esq.,
Superintendent of Indian Education,
Indian Affairs Branch,
Department of Mines & Resources,
OTTAWA.

I have just returned from Edmonton to find your letters of April 6 and 7, file 116-3-5(E.1) re visit of Major C. A. F. Clark to Indian Agencies in Alberta.

If at all possible, Major Clark should re-arrange his itinerary in order that he might visit Agencies in this Province later on. Winter conditions here have been unduly prolonged; the ground is under deep snow with no sign of spring; many highways are blocked and travel conditions at most Agencies are impossible.

This is brought to your attention because conditions are so bad that Major Clark's program will be severely hampered.

G. H. Gooderham,
Regional Supervisor of Indian Agencies.

Peigan (RC) Indian Residential School.

It is recommended that the accommodation at this school be increased by the addition of a building to be moved from the former airport at Pearce, Alta.

Among buildings inspected by the undersigned in company with Rev. M. Lafrance, Rev. F.A. Charron and Mr. Superintendent Ragan, the following were considered best in the order given:

- | | | |
|-------------|-----------------|------------|
| 1. Bldg. #3 | Officers' Mess. | 90' x 24' |
| 2. " #34 | "Hostels" Bldg. | 80' x 26' |
| 3. " #13 | Stores. | 100' x 30' |

The first of these buildings if erected over a full basement would provide ample space, with adjustments in the main building, for a resident pupilage of about 120, a figure which will be reached in about five years' time. Present attendance is 68. About thirty more should be enrolled next September. Classes are organized as follows:

		I	II	III	IV	V	VI	VII	VIII	TOTAL
Beginners										
Boys	4	1	9	6	1	6	1	-	-	23
Girls	4	3	6	8	8	3	3	4	1	40
Total	8	4	15	14	9	9	4	4	1	68

SISTER LEWIS

SISTER Alice Houle.

It is recommended that when the attendance approaches 100 there should be four teachers.

The two classrooms presently in use would become:
Junior Room (small) - bedrooms for staff.
Senior Room (larger) - chapel.

Present chapel to become sewing and allied arts room.

Present sewing room to become additional girls' dormitory.

Present ~~sewing~~ room to become additional girls' recreation room.

(The outlook is for an increased number of girls).
Further boys may be absorbed by using double-decker bunks.

Indian Affairs. (RG 10, Volume 6363, file 759-5, part 7)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2

Beigan (R.C.) Cont.

The added building would allow three, perhaps four classrooms on the main floor. The basement would allow for a large dining-room - auditorium plus an enlarged laundry.

The over-all cost should not exceed the figure suggested by Mr. Gooderham. It could be less.

After extensive investigations by myself I had a conference at Gunther Creek with Mr. Agent McMillan, Rev. Principal Lafrance and the local Alberta School Inspector, Mr. James A. McKay. They confirm my views in the following matters:

1. It is best to continue a centralized school on the present site using existing facilities and adding thereto.
2. The present outlook for increasing attendance on a day-pupil system is not promising.
3. If the water situation does not worsen (and it may improve) no difficulty should arise.
4. The number of teachers should be increased.

War Assets advise that although all unsold buildings are for the moment "frozen" requisitions should go forward immediately.

C. A. Clark

4 May, 1948.

116-2-5 (E.1)

c/c on file 116-1-5

May 7, 1948.

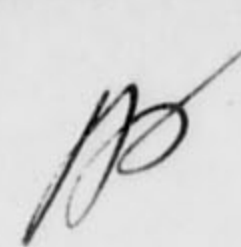

Mr. G.H. Gooderham,
Regional Supervisor of Indian Agencies,
Calgary, Alberta.

We have a report from Major Clark suggesting the purchase of the following buildings which are now located at the former airport at Pearce, Alberta.

1. Bldg. #3, Officers' Mess 90' x 24'
2. Bldg. #34 "Hostess" Bldg. 80' x 26'
3. Bldg. #13 Stores 100' x 30'

He has no doubt discussed the matter with you and as you are aware, Major Clark suggests placing them at the Sacred Heart and St. Cyprian Residential Schools.

We would appreciate it if you would let us have an idea of the cost of securing these buildings and also the cost of moving them to the new sites.

Philip Phelan
Chief, Training Division.

Attention: Chief, Training Division

Answering yours of the 7th instant, file 116-2-5 (E.1), I am not in a position to give you definite figures of the cost of the buildings, nor the cost of moving them to the new sites, but I think a fair comparison would be the cost of similar type buildings recently purchased for the Blood Residential Schools, and I expect the cost of moving would not be more.

The two buildings purchased from War Assets for these schools cost about \$2500 and the moving \$6800, making a grand total of \$9300. I would estimate an outside amount of \$9,000 for purchasing and moving.

I have been trying to get some estimate for the cost of construction of cement basements for these buildings, but have not succeeded. Mr. Clark and I are in agreement that the buildings purchased and used as classroom blocks should be set on basements.

We are also in total agreement that the solution to the school problem on the Peigan Reserve is classroom blocks at both residential schools. If you concur, and can finance it, it is suggested that you make application for the two buildings at the Pearce Airport. I believe this is done through the War Assets Corporation, Montreal.

I have been in touch with the Principal of the Sacred Heart Indian Residential School re the requirements at their school for this year, which has been passed in the Estimates. With a view that \$3000.00 was allowed I wish to place before you the following requests.

Artificial Brick for outside school	\$1500.00
Frigerator (Merosene.)	425.00
Repair Roof School	250.00
Laundry Equipment	500.00
Emergency	325.00
	<u>3000.00</u>

The above prices are just estimates, and will await your instructions, regarding the go ahead signal.

The Principal is also very anxious to have some information, regarding the visit of Major Clarke and myself to Pearce re buildings for class rooms, as to whether there will be anything done in this regard.

Attention B F Neary Esqr.

Anthony McMillan
Indian Agent.

Mr. Anthony McMillan, Indian Agent,
Brocket, Alberta.

We have your letter of the 5th instant, file
116-11-6, with reference to improvements required at
the Sacred Heart Indian Residential School.

You have already received the letter advising
you that a member of the Donald Inspection Limited
will visit the Sacred Heart School. We will delay
action on the contents of your letter until we re-
ceive that report.

Bernard F. Neary
Superintendent of Education.

August 20, 1948.

Mr. Anthony McMillan,
Indian Agent,
Brocket, Alberta.

Dear Sir:

Permit me to draw your attention to the fact that our root cellar having caved in, it is imperious that it be fixed right away for the storage of vegetables.

Would you kindly ask an emergency grant to the Department, to the amount of \$350.00 which I estimate it will cost, and also a \$50. grant for repairs of the Red Jacket pump.

Would you kindly inquire if any further estimates will be granted, as some repairs on the building will necessarily have to be done.

Yours truly

Maurice B. Power

I am enclosing herewith a letter received from the principal of the Sacred Heart School, regarding the Estimates allowed this School, the principal has found that repairs will have to be made to his root Cellar right away, and also a sum of \$50.00 be allowed for the fixing of the Red Jacket Pump.

I would recommend that authority be granted immediately for the repairs he wishes to do, that is \$350.00 for root cellar and \$50.00 for pump.

I also concur with his request that information be given re the balance of the amount available, so that further work can be done.

We have awaited the result of Mr Ruddick's report, but with cold weather in the offing, concrete work will be difficult to do when the frost appears.

I am enclosing Father Le France's letter for your information.

Anthony McMillan
India Agent.

CALGARY, Alberta, August 23rd, 1948.
